

DSL-2740U

Wireless ADSL2+ Router with Ethernet WAN Support

BEFORE YOU BEGIN

Delivery Package

- Router DSL-2740U
- Power adapter DC 12V/0.5A
- RJ-11 telephone cable
- Straight-through Ethernet cable
- Splitter
- “*Quick Installation Guide*” (brochure).

If any of the items are missing, please contact your reseller.

The “*User Manual*” and “*Quick Installation Guide*” documents are available on D-Link website (see www.dlink.ru).

Using a power supply with a different voltage rating than the one included will cause damage and void the warranty for this product.

Default Settings

IP address of wireless router	192.168.1.1
Username (login)	admin
Password	admin
Name of wireless network (SSID)	DSL-2740U
Network key (PSK)	see WPS PIN on the barcode label on the bottom panel of the device

System Requirements and Equipment

- A computer with any operating system that supports a web browser.
- A web browser to access the web-based interface of the router:
 - Apple Safari 8 and later
 - Google Chrome 48 and later
 - Microsoft Internet Explorer 10 and later
 - Microsoft Edge 20.10240 and later
 - Mozilla Firefox 44 and later
 - Opera 35 and later.
- A NIC (Ethernet or Wi-Fi adapter) to connect to the router.
- An 802.11b, g, or n Wi-Fi adapter to create a wireless network.

CONNECTING TO PC

PC with Ethernet Adapter

1. Make sure that your PC is powered off.
2. Connect an Ethernet cable between any of four Ethernet ports located on the back panel of the router and the Ethernet port of your PC.
3. ***To connect the router to a DSL line:*** connect a phone cable between the DSL port of the router and the **ADSL OUT** port of the splitter. Connect your phone to the **PHONE** port of the splitter. Then connect another phone cable between a phone jack and the **ADSL IN** port of the splitter.
4. ***To connect the router to an Ethernet line:*** run the Initial Configuration Wizard and select the router's LAN port that will be used as the WAN port. Then connect the Ethernet cable between the selected Ethernet port located on the back panel of the router and the Ethernet line.
5. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
6. Turn on the router by pressing the **ON/OFF** button on its back panel.
7. Turn on your PC and wait until your operating system is completely loaded.

Now you should configure your PC to obtain an IP address automatically (as DHCP client).

Obtaining IP Address Automatically in OS Windows XP

1. Click the **Start** button and proceed to the **Control Panel > Network and Internet Connections > Network Connections** window.
2. In the **Network Connections** window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

3. In the **Local Area Connection Properties** window, on the **General** tab, select the **Internet Protocol (TCP/IP)** line. Click the **Properties** button.

4. Select the **Obtain an IP address automatically** and **Obtain DNS server address automatically** radio buttons. Click the **OK** button.

5. Click the **OK** button in the connection properties window.

Now your computer is configured to obtain an IP address automatically.

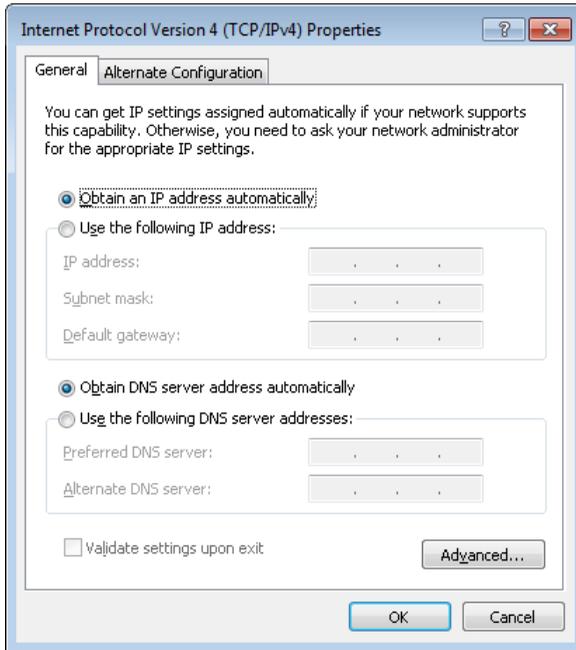

Obtaining IP Address Automatically in OS Windows 7

1. Click the **Start** button and proceed to the **Control Panel** window.
2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)
3. In the menu located on the left part of the window, select the **Change adapter settings** line.
4. In the opened window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

5. In the **Local Area Connection Properties** window, on the **Networking** tab, select the **Internet Protocol Version 4 (TCP/IPv4)** line. Click the **Properties** button.

6. Select the **Obtain an IP address automatically** and **Obtain DNS server address automatically** radio buttons. Click the **OK** button.

7. Click the **OK** button in the connection properties window.
Now your computer is configured to obtain an IP address automatically.

PC with Wi-Fi Adapter

1. ***To connect the router to a DSL line:*** connect a phone cable between the DSL port of the router and the **ADSL OUT** port of the splitter. Connect your phone to the **PHONE** port of the splitter. Then connect another phone cable between a phone jack and the **ADSL IN** port of the splitter.
2. ***To connect the router to an Ethernet line:*** run the Initial Configuration Wizard and select the router's LAN port that will be used as the WAN port. Then connect the Ethernet cable between the selected Ethernet port located on the back panel of the router and the Ethernet line.
3. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
4. Turn on the router by pressing the **ON/OFF** button on its back panel.
5. Turn on your PC and wait until your operating system is completely loaded.
6. Turn on your Wi-Fi adapter. As a rule, modern notebooks with built-in wireless NICs are equipped with a button or switch that turns on/off the wireless adapter (refer to your PC documents). If your PC is equipped with a pluggable wireless NIC, install the software provided with your Wi-Fi adapter.

Now you should configure your Wi-Fi adapter.

Configuring Wi-Fi Adapter in OS Windows XP

1. Click the **Start** button and proceed to the **Control Panel > Network and Internet Connections > Network Connections** window.
2. Select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.

3. Search for available wireless networks.
4. In the opened **Wireless Network Connection** window, select the wireless network **DSL-2740U** and click the **Connect** button.
5. In the opened window, enter the network key (see WPS PIN on the barcode label on the bottom panel of the device) in the **Network key** and **Confirm network key** fields and click the **Connect** button.

After that the **Wireless Network Connection Status** window appears.

If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the router you will need to reconfigure the wireless connection using the newly specified settings.

Configuring Wi-Fi Adapter in OS Windows 7

1. Click the **Start** button and proceed to the **Control Panel** window.
2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)
3. In the menu located on the left part of the window, select the **Change adapter settings** line.
4. In the opened window, select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.
5. To open the list of available wireless networks, select the icon of the wireless network connection and click the **Connect To** button or left-click the network icon in the notification area located on the right side of the taskbar.

- In the opened window, in the list of available wireless networks, select the wireless network **DSL-2740U** and click the **Connect** button.

- In the opened window, enter the network key (see WPS PIN on the barcode label on the bottom panel of the device) in the **Security key** field and click the **OK** button.
- Wait for about 20-30 seconds. After the connection is established, the network icon will be displayed as the signal level scale.

If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the router you will need to reconfigure the wireless connection using the newly specified settings.

CONFIGURING ROUTER

Connecting to Web-based Interface

Start a web browser. In the address bar of the web browser, enter the IP address of the router (by default, the following IP address is specified: **192.168.1.1**). Press the **Enter** key.

! If the error “*The page cannot be displayed*” (or “*Unable to display the page*”/“*Could not connect to remote server*”) occurs upon connecting to the web-based interface of the router, make sure that you have properly connected the router to your computer.

If the device has not been configured previously or the default settings have been restored, after access to the web-based interface the Initial Configuration Wizard opens (see the **Initial Configuration Wizard** section, page 18).

If you configured the device previously, after access to the web-based interface the login page opens. Enter the username (**admin**) in the **Username** field and the password you specified in the **Password** field, then click the **LOGIN** button.

The screenshot shows a login form with a teal header containing the word "Login". Below the header, there are two input fields: "Username" and "Password". The "Username" field has a cursor at the beginning. The "Password" field has a small eye icon to its right, indicating a toggle for visibility. At the bottom of the form, there are two buttons: "LOGIN" in teal text and "CLEAR" in a grey button.

The web-based interface of the router is multilingual. You can select the needed language upon the initial configuration of the web-based interface of the router or in the **System / Configuration** section of the menu.

The **Summary** page displays general information on the router and its software.

The screenshot shows the 'Summary' page of the DSL-2740U router. The page is organized into several panels:

- Device Information:**
 - Model: DSL-2740U
 - Hardware revision:
 - Firmware version: 3.0.0
 - Build time: Tue Oct 17 14:06:58 MSK 2017
 - Vendor: D-Link Russia
 - Support: support@dlink.ru
 - Summary: Root filesystem image for DSL-2740U
 - Uptime: 0 days 01:05:21
- Wi-Fi 2.4 GHz:**
 - Status: On ●
 - Broadcasting: On ●
 - Additional networks count: 0
 - Network name (SSID): DSL-2740U-1614
 - Security: WPA2-PSK 🔒
- WAN IPv4:**
 - Connection type: Dynamic IPv4
 - Status: Off ●
- LAN:**
 - LAN IPv4: 192.168.1.1
 - LAN IPv6: fd01::1/64
 - Wireless connections: -
 - Wired connections: 1
- LAN Ports:**
 - LAN1: Off ●
 - LAN2: Off ●
 - LAN3: ●
 - LAN4: Off ●
- Yandex.DNS:**
 - Yandex logo
 - Yandex.DNS Enable
 - Safe: 1 device 🛡️
 - Child: 0 devices 👶
 - Protection off: 0 devices 🛡️

The **Home** page displays links to the most frequently used pages with device's settings.

Summary Home

Welcome to configuration interface of D-Link device!

This page contains links to interface sections which are often accessed after the initial configuration. Complete list of sections is available in the menu.

- URL Filter**
You can block access to unwanted web sites by URL addresses.
- Yandex.DNS**
Fast DNS service from Yandex with additional security features.
- Restriction of Wireless Clients Access**
You can block Wi-Fi access to the device for certain clients.
- Connection of Multimedia Devices**
Select ports to connect multimedia devices.
- Device Information**
The device's Information summary.
- Wi-Fi Configuration**
Configuration of basic Wi-Fi parameters. Here you can configure the network name, security settings, etc.

Other settings of the router are available in the menu in the left part of the page. Go to the relevant section and select the needed page or run the wizard in the **Initial Configuration** section.

Initial Configuration Wizard

In order to start the Initial Configuration Wizard manually, go to the **Initial Configuration** section.

Click the **OK** button and wait until the factory default settings are restored. Then click the **START** button.

If the device has not been configured previously or the default settings have been restored, the Initial Configuration Wizard starts automatically upon access to the web-based interface or upon opening a web site on the Internet.

1. Click **YES** in order to leave the current language of the web-based interface or click **NO** to select the other language.

2. On the next page, click the **CONTINUE** button.

Selecting Operation Mode

In order to connect your device to an ADSL line, on the **Device mode** page, from the **Connection method** list, select the **ADSL** value. In this mode you can configure a WAN connection, set your own settings for the wireless network, configure LAN ports to connect an STB or VoIP phone, and set your own password for access to the web-based interface of the device.

In order to connect your device to an Ethernet line, on the **Device mode** page, from the **Connection method** list, select the **Ethernet** value. In this mode you can configure a LAN port as a WAN port, configure a WAN connection, set your own settings for the wireless network, configure LAN ports to connect an STB or VoIP phone, and set your own password for access to the web-based interface of the device.

When the operation mode is selected, click the **NEXT** button.

Selecting Ethernet WAN Port

This configuration step is available for the **Ethernet** connection method.

1. On the **Device connection** page, select a LAN port that will be used as the WAN port.

2. Click the **NEXT** button.

Configuring Ethernet WAN Connection

! You should configure your WAN connection in accordance with data provided by your Internet service provider (ISP). Make sure that you have obtained all necessary information prior to configuring your connection. Otherwise contact your ISP.

1. On the **Internet connection type** page, from the **Connection type** list, select the connection type used by your ISP and fill in the fields displayed on the page.

Static IPv4: Fill in the following fields: **IP address**, **Netmask**, **Gateway IP address**, and **DNS IP address**.

IP address*
Netmask*
Gateway IP address*
DNS IP address*

Static IPv6: Fill in the following fields: **IP address**, **Prefix**, and **Gateway IP address**.

IP address*
Prefix*
Gateway IP address*

PPPoE, IPv6 PPPoE, PPPoE Dual Stack: Enter authorization data provided by your ISP (the username (login) in the **Username** field and the password in the **Password** field). Click the **Show** icon () to display the entered password. If authorization is not required, select the **Without authorization** checkbox.

Without authorization

Username*

Password* 

2. If your ISP uses MAC address binding, select the **Clone MAC address of your device** checkbox.
3. If the Internet access is provided via a VLAN channel, select the **Use VLAN** checkbox and fill in the **VLAN ID** field.

Clone MAC address of your device
In some ISP's networks, it is required to register a certain MAC address in order to get access to the Internet.
 Use VLAN
Select the checkbox if the Internet access is provided via a VLAN channel.

VLAN ID*

4. Click the **NEXT** button.

Configuring ADSL WAN Connection

! You should configure your WAN connection in accordance with data provided by your Internet service provider (ISP). Make sure that you have obtained all necessary information prior to configuring your connection. Otherwise contact your ISP.

1. On the **Internet connection type** page, from the **Connection type** list, select the connection type used by your ISP and fill in the fields displayed on the page.

Static IPv4, IPoA: Fill in the following fields: **IP address**, **Netmask**, **Gateway IP address**, and **DNS IP address**.

IP address*
Netmask*
Gateway IP address*
DNS IP address*

Static IPv6: Fill in the following fields: **IP address**, **Prefix**, and **Gateway IP address**.

IP address*
Prefix*
Gateway IP address*

PPPoE, IPv6 PPPoE, PPPoE Dual Stack, PPPoA: Enter authorization data provided by your ISP (the username (login) in the **Username** field and the password in the **Password** field). Click the **Show** icon () to display the entered password. If authorization is not required, select the **Without authorization** checkbox.

Without authorization

Username*

Password* 

2. Specify the VPI and VCI values in the relevant fields.

VPI (0-255)*

VCI (32 - 65535)*

3. Click the **NEXT** button.

Configuring Wireless Network

1. On the **Wireless Network 2.4 GHz** page, in the **Network name** field, specify your own name for the wireless network or leave the value suggested by the router.
2. In the **Password** field, specify your own password for access to the wireless network or leave the value suggested by the router (WPS PIN of the device, see the barcode label).
3. You can restore the parameters of the wireless network specified before resetting to factory defaults. To do this, click the **RESTORE** button.

Wireless Network 2.4 GHz

Enable

Network name*

mywifi_154

ⓘ The number of characters should not exceed 32

Open network

Password*

76543210 👁

ⓘ Password should be between 8 and 63 ASCII characters

RESTORE You can restore network name and security that was set before applying factory settings.

4. If you want to create an additional wireless network isolated from your LAN, select the **Enable guest network** checkbox.

Enable guest network

Guest Wi-Fi network allows connection to your device and getting access to the Internet. Upon that computers connected to this wireless network will be isolated from the resources of your main local area network. This helps to secure your LAN while you provide access to the Internet for temporary users.

Network name*

The number of characters should not exceed 32

Open network

Max associated clients*

0

Enable shaping

Shaping (Mbit/s)*

0

5. In the **Network name** field, specify your own name for the guest wireless network or leave the value suggested by the router.
6. If you want to create a password for access to the guest wireless network, deselect the **Open network** checkbox and fill in the **Password** field.
7. If you want to limit the bandwidth of the guest wireless network, select the **Enable shaping** checkbox and fill in the **Shaping** field.
8. Click the **NEXT** button.

Configuring LAN Ports for IPTV/VoIP

1. On the **IPTV** page, select the **Is an STB connected to the device** checkbox.

IPTV

Is an STB connected to the device?

ⓘ If your ISP provides IPTV service, you can connect an STB directly to the router without additional equipment

Use VLAN ID

VLAN ID*

ⓘ Information about the VLAN ID can be found in the contract.

DSL 4 3 LAN 2 1

2. Select a free LAN port for connecting your set-top box.
3. *For the **Ethernet** connection method:* If the IPTV service is provided via a VLAN channel, select the **Use VLAN ID** checkbox and fill in the **VLAN ID** field.
4. *For the **ADSL** connection method:* Specify the VPI and VCI values in the relevant fields.
5. Click the **NEXT** button.

6. On the **VoIP** page, select the **In an IP phone connected to the device** checkbox.

The screenshot shows a web interface for VoIP configuration. At the top, the title "VoIP" is displayed. Below it, there are two checked checkboxes: "Is an IP phone connected to the device?" and "Use VLAN ID". A greyed-out checkbox "If your ISP provides VoIP service, you can connect an IP phone directly to the router without additional equipment" is also visible. Below the checkboxes is a "VLAN ID*" field with a red asterisk. An information icon and text "Information about the VLAN ID can be found in the contract." are present. At the bottom, there is a diagram of a router's front panel with five ports labeled DSL, 4, 3, LAN, 2, and 1. The LAN port is highlighted with a white background. Below the diagram are two buttons: a grey "BACK" button with a left arrow and a blue "NEXT" button with a right arrow.

7. Select a free LAN port for connecting your IP phone.
8. *For the **Ethernet** connection method:* If the VoIP service is provided via a VLAN channel, select the **Use VLAN ID** checkbox and fill in the **VLAN ID** field.
9. *For the **ADSL** connection method:* Specify the VPI and VCI values in the relevant fields.
10. Click the **NEXT** button.

Changing Web-based Interface Password

On this page you should change the default administrator password. You may set any password except **admin**. Use digits, Latin letters (uppercase and/or lowercase), and other characters available in the US keyboard layout.¹

! Remember or write down the new password for the administrator account. In case of losing the new password, you can access the settings of the router only after restoring the factory default settings via the hardware **RESET** button. This procedure wipes out all settings that you have configured for your router.

Click the **NEXT** button.

On the next page, check all the settings you have just specified.

Also you can save a text file with parameters set by the Wizard to your PC. To do this, click the **SAVE CONFIGURATION FILE** button and follow the dialog box appeared.

To finish the Wizard, click the **APPLY** button. The router will apply settings, reboot, if needed, and check the Internet connection if the Wizard has configured a WAN connection.

¹ 0-9, A-Z, a-z, space, !"#\$%&'()*+,-./:;<=>?@[\\]^_`{|}~.

Configuring Local Area Network

1. Go to the **Connections Setup / LAN** page.
2. If needed, change the IPv4 address of the router's LAN interface and the mask of the local subnet. To do this, click the **IPv4** tab and specify needed values in the **IP address** and **Subnet mask** fields in the **Local IP Address** section.

Local IP Address

IP address*

192.168.1.1

Subnet mask*

255.255.255.0

Device domain name

3. If needed, specify your own IPv6 address of the router's LAN interface. To do this, click the **IPv6** tab and select the **Static** value from the **Mode of local IPv6 address assignment** drop-down list in the **Local IPv6 Address** section. Then specify the needed value in the **IPv6 address** field.

Local IPv6 Address

Mode of local IPv6 address assignment

Static

IPv6 address*

fd01::1

Prefix*

64

4. **IPv4 address assignment.** By default, the built-in DHCP server of the router assigns IPv4 addresses to the devices of the LAN. If you want to manually assign IPv4 addresses, disable the DHCP server (click the **IPv4** tab and select the **Disable** value from the **Mode of dynamic IP address assignment** drop-down list in the **Dynamic IP Addresses** section).

Dynamic IP Addresses

Mode of dynamic IP address assignment

DHCP server

Start IP*

192.168.1.2

End IP*

192.168.1.254

Lease time (in minutes)*

1440

DNS relay

5. **IPv6 address assignment.** By default, the devices of the LAN automatically assign IPv6 addresses to themselves (the **Stateless** value is selected from the **Mode of dynamic IPv6 address assignment** drop-down list in the **Dynamic IPv6 Addresses** section on the **IPv6** tab). If the devices of the LAN do not support IPv6 address autoconfiguration, enable the built-in DHCPv6 server of the router (select the **Stateful** value from the **Mode of dynamic IPv6 address assignment** drop-down list). If you want to manually assign IPv6 addresses to devices of the LAN, select the **Disable** value from the **Mode of dynamic IPv6 address assignment** drop-down list.

Dynamic IPv6 Addresses

Mode of dynamic IPv6 address assignment

Stateless

Lease time (in minutes)*

5

6. After specifying the needed parameters on the **Connections Setup / LAN** page, click the **APPLY** button.

SPECIFICATIONS*

Hardware	
Processor	· RTL8676S
RAM	· 32MB, SDRAM
Flash	· 4MB, SPI
Interfaces	· RJ-11 ADSL port · 4 10/100BASE-TX LAN ports
LEDs	· POWER · 4 LAN LEDs · WLAN · WPS · DSL · INTERNET
Buttons	· ON/OFF button to power on/power off · RESET button to restore factory default settings · WPS button to set up wireless connection · WIRELESS ON/OFF button to enable/disable wireless network
Antenna	· Two external non-detachable omnidirectional antennas (2dBi gain)
MIMO	· 2 x 2
Power connector	· Power input connector (DC)

Humidity	· From 5% to 95% (non-condensing)

SAFETY RULES AND CONDITIONS

Please carefully read this section before installation and connection of the device. Make sure that the power adapter and cables are not damaged. The device should be used only as intended in accordance with the documents.

The device is intended for use in dry, clean, dust-free, and well ventilated areas with normal humidity away from strong heat sources. Do not use the device outdoors or in the areas with high humidity. Do not place foreign objects on the device. Do not obstruct the ventilation openings of the device. The environmental temperature near the device and the temperature inside the device's cover should be within the range from 0 °C to +40 °C.

Only use the power adapter supplied with the device. Do not plug in the adapter, if its case or cable are damaged. Plug the adapter only into working electrical outlets with parameters indicated on the adapter.

Do not open the cover of the device! Unplug the device before dusting and cleaning. Use a damp cloth to clean the device. Do not use liquid/aerosol cleaners or magnetic/static cleaning devices. Prevent moisture getting into the device or the power adapter.

The service life of the device is 2 years.

TECHNICAL SUPPORT

You can find software updates and user documentation on our website.

D-Link provides its customers with free support within the product's warranty period.

Customers can contact the technical support group by phone or by e-mail/Internet.
