

This is a primitive settlement step

1. Make sure that NETBEUI is enabled on the printer server.
2. In Windows , confirm the NETBEUI have installed on the Network of Control Panel .
3. Choose a free printer port (LPT1or LPT2) not begin used on the PC
4. In the DOS mode of windows key-in the command :

```
c:\>net use devicensme \\computername\sharename
```

Where "devicensme " is the name of the free printer port , "computername" is the name of the printer server , and "sharename" is the name of the printer server's port .

For example

```
c:\>net use lpt1 \\ps-18f\ps-18f-p1
```

Test print :

```
c:\winnt>print win.ini
```

About this step 4 , the command should be

```
net use devicensme @\\computername\sharename (@ = Space)
```

You can't key in the

```
net use devicensme \\computername\sharename
```
