# CHAPTER 1. INTRODUCTION

## Contents and Audience

This manual describes the router DIR-300 and explains how to configure and operate it.

This manual is intended for users familiar with basic networking concepts, who create an in-home local area network, and system administrators, who install and configure networks in offices.

## Conventions

| Example  | Description   |
|--|---|
| text   | The body text of the manual.  |
| <i>Before You Begin</i>  | A reference to a chapter or section of this manual.                                   |
| <i>“Quick Installation Guide”</i>  | A reference to a document.  |
| <b>Change</b>  | A name of a menu, menu item, control (field, checkbox, drop-down list, button, etc.). |
| <b>192.168.0.1</b>   | Data that you should enter in the specified field.                                    |
|  <u>Information</u> | An important note.  |

## Document Structure

*Chapter 1* describes the purpose and structure of the document.

*Chapter 2* gives an overview of the router's hardware and software features, describes its appearance and the package contents.

*Chapter 3* explains how to install the router DIR-300 and configure a PC in order to access its web-based interface.

*Chapter 4* describes all pages of the web-based interface in detail.

*Chapter 5* includes safety instructions and tips for networking and connecting additional equipment.

*Chapter 6* introduces abbreviations and acronyms used in this manual.

## CHAPTER 2. OVERVIEW

### ***General Information***

The DIR-300 device is a wireless router with a built-in 4-port switch. It provides a fast and simple way to create a wireless and wired network at home or in an office.

You are able to connect the wireless router DIR-300 to a cable or DSL modem or to a private Ethernet line and use a high-speed Internet connection to successfully fulfill a wide range of professional tasks. The built-in 4-port switch enables you to connect Ethernet-enabled computers, game consoles, and other devices to your network.

Using the DIR-300 device, you are able to quickly create a wireless network at home or in your office, which lets your relatives or employees connect to your wireless network virtually anywhere (within the operational range of your wireless network). The router can operate as a base station for connecting wireless devices of the standards 802.11b, 802.11g, and 802.11n (at the rate up to 150Mbps).

The router supports multiple functions for the wireless interface: several security standards (WEP, WPA/WPA2), MAC address filtering, WPS, WMM.

The wireless router DIR-300 includes a built-in firewall. The advanced security functions minimize threats of hacker attacks and prevent unwanted intrusions to your network.

You can configure and manage the settings of the wireless router DIR-300 via the user-friendly web-based interface (the interface is available in several languages).

## **Specifications\***

### **WAN Interface:**

- 1 10/100BASE-TX Ethernet port for cable or DSL modem or private Ethernet line.

### **LAN Interface:**

- 4 10/100BASE-TX Ethernet ports.

### **WLAN Interface:**

- IEEE 802.11n (up to 150Mbps)
- IEEE 802.11b/g.

### **Network Functions:**

- WAN connection types:
  - PPPoE
  - Static IP
  - Dynamic IP
  - PPTP/L2TP + Static IP
  - PPTP/L2TP + Dynamic IP
- DHCP server and client
- DNS relay
- VPN pass-through (PPTP/L2TP)
- Dynamic DNS
- Static IP routing
- Remote management
- Network statistics for each interface
- IGMP Proxy
- RIP
- UPnP
- WAN ping respond.

---

\* The device features are subject to change without notice. For the latest versions of the firmware and relevant documentation, visit [www.dlink.ru](http://www.dlink.ru).

### **Wireless Connection:**

- WLAN splitting (up to 4 SSIDs)
- Supported security settings:
  - WEP
  - WPA/WPA2 Personal
- MAC filter
- Managing connected stations
- PIN and PBC methods of WPS
- WMM (Wi-Fi QoS)
- Advanced settings.

### **Firewall Functions:**

- Network Address Translation (NAT)
- Stateful Packet Inspection (SPI)
- IP filters
- MAC filter
- DMZ
- Prevention of ARP and DDoS attacks
- Virtual servers.

### **Configuration and Management:**

- Multilingual web-based interface for configuration and management
- Access via TELNET
- Firmware update via web-based interface
- Saving/restoring configuration to/from file
- Support of remote logging
- Automatic synchronization of system time with NTP server
- Ping function
- Traceroute utility.

**LEDs:**

- Power
- WLAN
- Internet
- WPS
- 4 LAN LEDs.

**Power:**

- External power adapter DC 12V
- Power button
- Reset to Factory Defaults button
- WPS button.

**Operating Temperature:**

- from 0 to 40 °C (from 32 to 104 °F).

**Storage Temperature:**

- from -20 to 65 °C (from -4 to 149 °F).

**Operating Humidity:**

- from 10% to 90% non-condensing.

**Storage Humidity:**

- from 5% to 95% non-condensing.

## Product Appearance

### Front Panel and Right Side Panel

Figure 1. Front panel view.

| LED  | Mode                  | Description   |
|--|-----------------------|---|
| <br><b>Power</b>      | <i>Solid green</i>    | The router is powered on.   |
|  | <i>No light</i>       | The router is powered off.  |
| <br><b>WPS</b>        | <i>Solid green</i>    | The wireless device is connected to the router's WLAN (lights for several minutes). |
|  | <i>Blinking green</i> | Attempting to add a wireless device via the WPS function.                           |
| <br><b>Internet</b> | <i>Solid green</i>    | The Internet connection is on.  |
|  | <i>Blinking green</i> | The WAN interface is active (upstream or downstream traffic).                       |
| <br><b>WLAN</b>     | <i>Solid green</i>    | The router's WLAN is on.  |
|  | <i>Blinking green</i> | The WLAN interface is active (upstream or downstream traffic).                      |
| <br><b>LAN 1-4</b>  | <i>Solid green</i>    | A device (computer) is connected to the relevant port, the connection is on.        |
|  | <i>Blinking green</i> | The LAN port is active (upstream or downstream traffic).                            |

The **WPS** button located on the right side panel of the router is designed to quickly add wireless devices to the router's WLAN.

The **RESET** button designed to restore the factory default settings is also located on the right side panel. To restore the factory defaults, push the button with the device turned on, hold for 7 seconds, then release the button.

## Back Panel

Figure 2. Back panel view.

| Port             | Description  |
|------------------|--|
| <b>LAN 1-4</b>   | 4 Ethernet ports to connect computers or network devices.  |
| <b>INTERNET</b>  | A port to connect to a cable or DSL modem or to a private Ethernet line (it is recommended to use the cable included in the delivery package). |
| <b>12 VDC IN</b> | Power connector.   |
| <b>ON/OFF</b>    | A button to turn the router on/off.  |

The device is also equipped with an external Wi-Fi antenna.

## ***Delivery Package***

The following should be included:

- Wireless router DIR-300
- Power adapter DC 12V
- Ethernet cable (CAT 5E)
- “***Quick Installation Guide***” (brochure).

The “***User Manual***” and “***Quick Installation Guide***” documents in Russian and English are available on D-Link website (see <ftp.dlink.ru/pub/Router/DIR-300A/Description/>).

Using a power supply with a different voltage rating than the one included will cause damage and void the warranty for this product.

## CHAPTER 3. INSTALLATION AND CONNECTION

### ***Before You Begin***

Please, read this manual prior to installing the device. Make sure that you have all the necessary information and equipment.

#### **Operating System**

Configuration of the wireless router DIR-300 with a built-in 4-port switch (hereinafter referred to as “the router”) is performed via the built-in web-based interface. The web-based interface is available from any operating system that supports a web browser.

#### **Web Browser**

The following web browsers are recommended: Windows Internet Explorer, Mozilla Firefox, or Opera.

For successful operation, JavaScript should be enabled on the web browser. Make sure that JavaScript has not been disabled by other software (such as virus protection or web user security packages) running on your computer.

#### **Wired or Wireless NIC (Ethernet or Wi-Fi Adapter)**

Any computer that uses the router should be equipped with an Ethernet or Wi-Fi adapter (NIC). If your computer is not equipped with such a device, install an Ethernet or Wi-Fi adapter prior to using the router.

#### **Wireless Connection**

Wireless workstations from your network should be equipped with a wireless 802.11b, g, or n NIC (Wi-Fi adapter). In addition, you should specify the values of SSID, channel number and security settings defined in the web-based interface of the router for all these wireless workstations.

## Connecting to PC

### PC with Ethernet Adapter

1. Make sure that your PC is powered off.
2. Connect an Ethernet cable between any of LAN ports located on the back panel of the router and the Ethernet port of your PC.
3. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
4. Turn on the router by pressing the **ON/OFF** button on its back panel.
5. Turn on your PC and wait until your operating system is completely loaded.

### Obtaining IP Address Automatically in OS Windows XP

1. Click the **Start** button and proceed to the **Control Panel > Network and Internet Connections > Network Connections** window.
2. In the **Network Connections** window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

Figure 3. The **Network Connections** window.

3. In the **Local Area Connection Properties** window, on the **General** tab, select the **Internet Protocol (TCP/IP)** line. Click the **Properties** button.

Figure 4. The **Local Area Connection Properties** window.

4. Select the **Obtain an IP address automatically** and **Obtain DNS server address automatically** radio buttons. Click the **OK** button.

Figure 5. The **Internet Protocol (TCP/IP) Properties** window.

5. Click the **OK** button in the connection properties window.

Now your computer is configured to obtain an IP address automatically.

## Obtaining IP Address Automatically in OS Windows 7

1. Click the **Start** button and proceed to the **Control Panel** window.
2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)

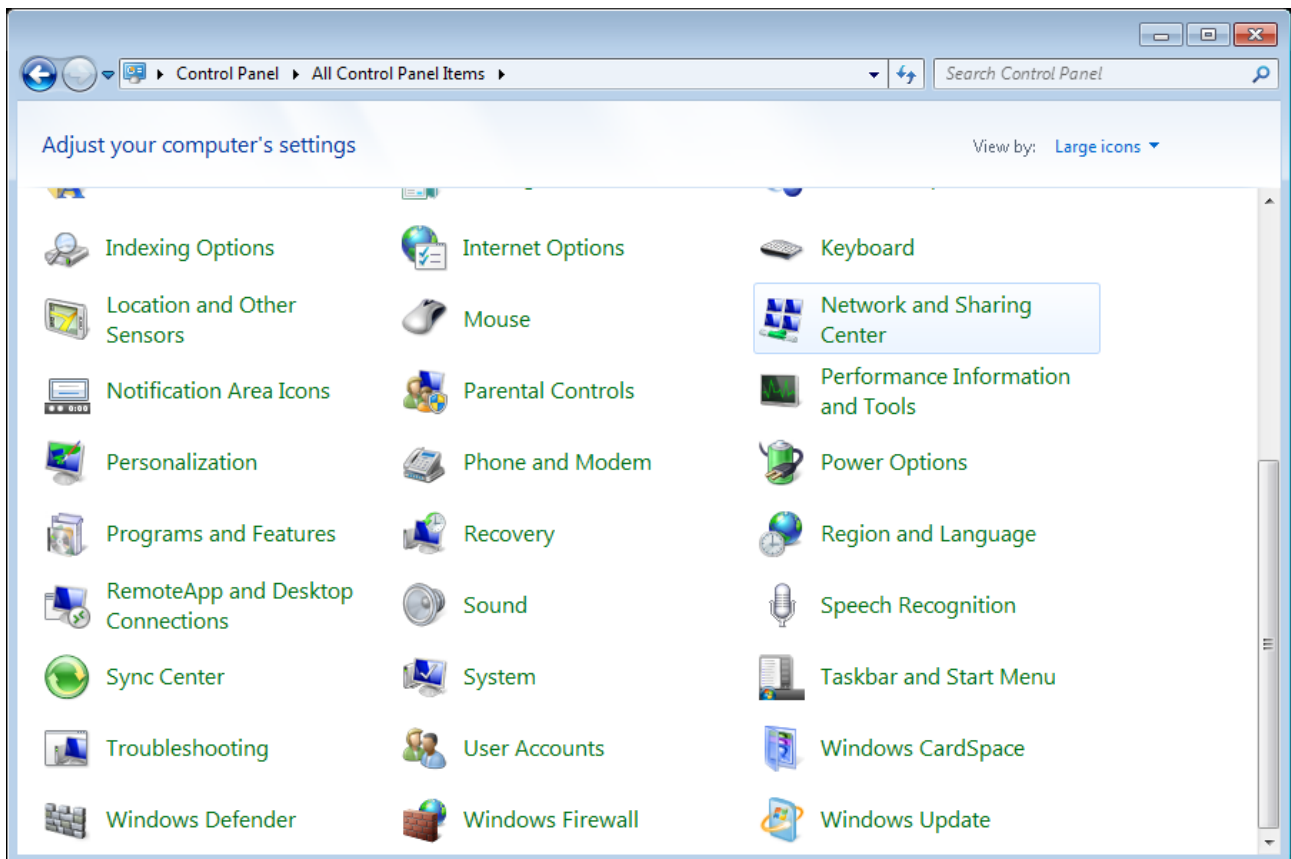

Figure 6. The **Control Panel** window.

3. In the menu located on the left part of the window, select the **Change adapter settings** line.

Figure 7. The **Network and Sharing Center** window.

4. In the opened window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

Figure 8. The **Network Connections** window.

5. In the **Local Area Connection Properties** window, on the **Networking** tab, select the **Internet Protocol Version 4 (TCP/IPv4)** line. Click the **Properties** button.

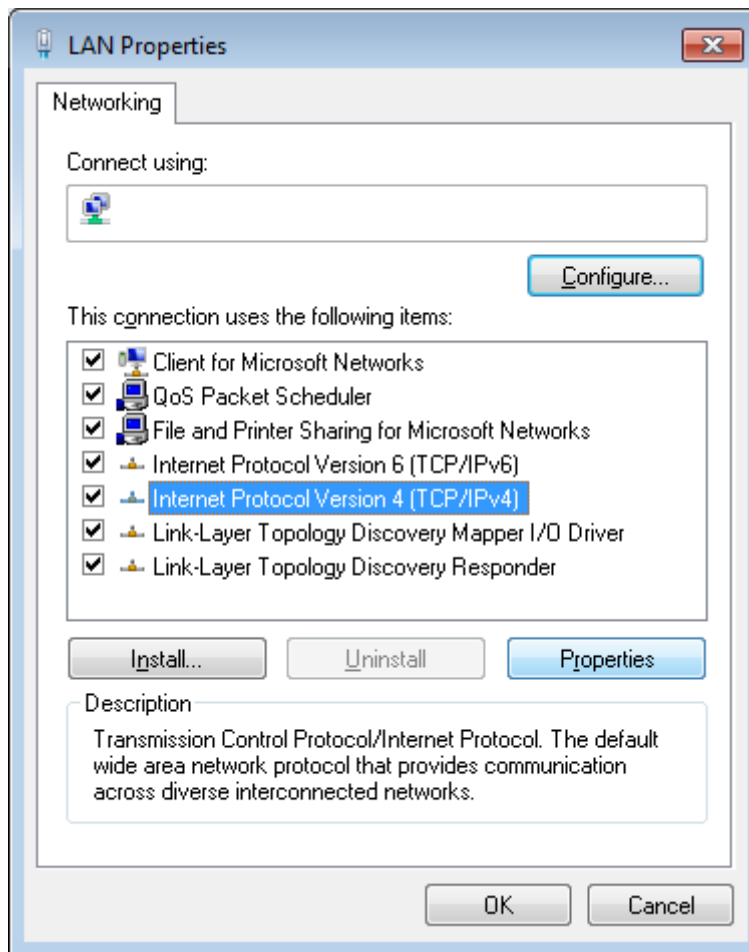

Figure 9. The **Local Area Connection Properties** window.

6. Select the **Obtain an IP address automatically** and **Obtain DNS server address automatically** radio buttons. Click the **OK** button.

Figure 10. The **Internet Protocol Version 4 (TCP/IPv4) Properties** window.

7. Click the **OK** button in the connection properties window.

Now your computer is configured to obtain an IP address automatically.

## PC with Wi-Fi Adapter

1. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
2. Turn on the router by pressing the **ON/OFF** button on its back panel.
3. Turn on your PC and wait until your operating system is completely loaded.
4. Turn on your Wi-Fi adapter. As a rule, modern notebooks with built-in wireless NICs are equipped with a button or switch that turns on/off the wireless adapter (refer to your PC documents). If your PC is equipped with a pluggable wireless NIC, install the software provided with your Wi-Fi adapter.

## Configuring Wi-Fi Adapter in OS Windows XP

1. Click the **Start** button and proceed to the **Control Panel > Network and Internet Connections > Network Connections** window.
2. Select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.

Figure 11. The **Network Connections** window.

3. Search for available wireless networks.
4. In the opened **Wireless Network Connection** window, select the wireless network **DIR-300** and click the **Connect** button.

After that the **Wireless Network Connection Status** window appears.

**!** If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the router you will need to reconfigure the wireless connection using the newly specified settings.

## Configuring Wi-Fi Adapter in OS Windows 7

1. Click the **Start** button and proceed to the **Control Panel** window.
2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)

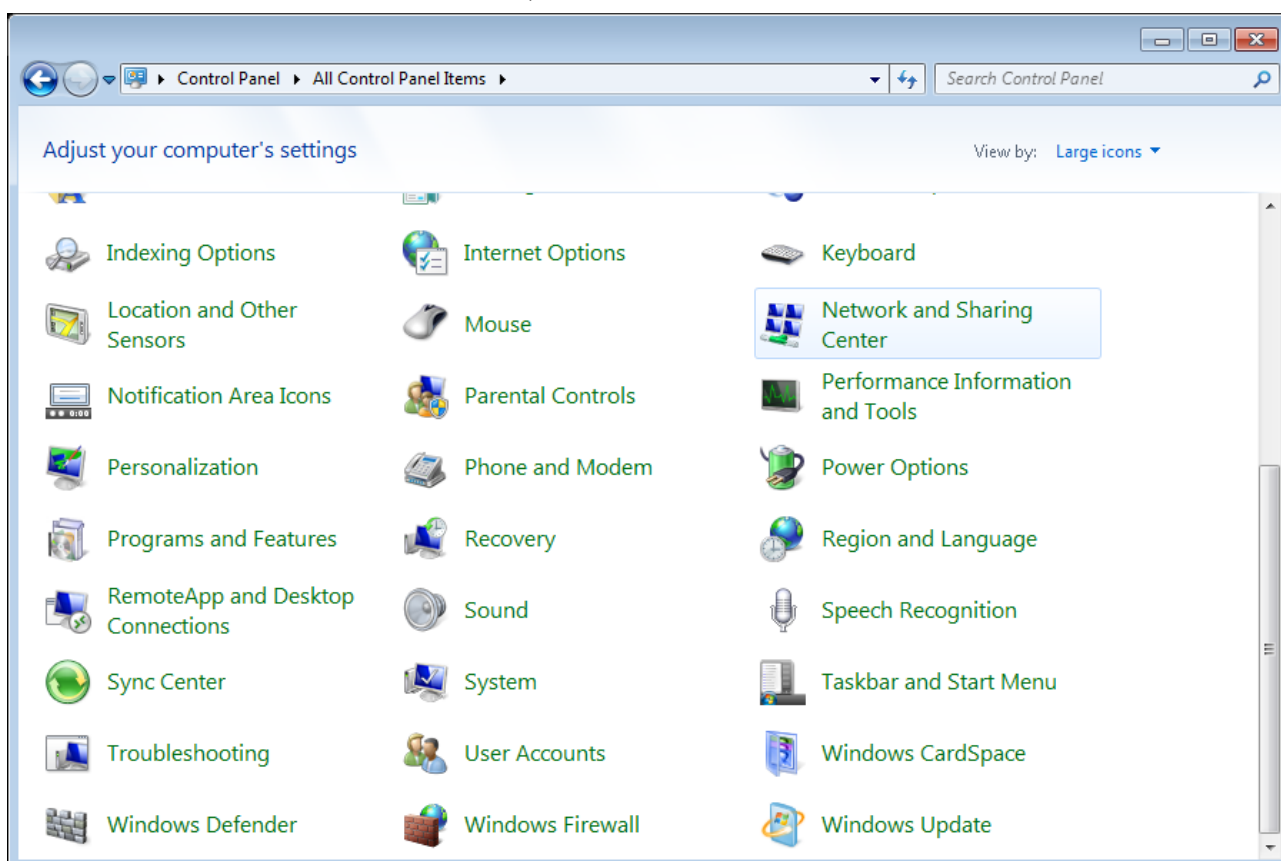

Figure 12. The **Control Panel** window.

3. In the menu located on the left part of the window, select the **Change adapter settings** line.
4. In the opened window, select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.
5. To open the list of available wireless networks, select the icon of the wireless network connection and click the **Connect To** button or left-click the network icon in the notification area located on the right side of the taskbar.

Figure 13. The notification area of the taskbar.

- In the opened window, in the list of available wireless networks, select the wireless network **DIR-300** and click the **Connect** button.

Figure 14. The list of available networks.

- Wait for about 20-30 seconds. After the connection is established, the network icon will be displayed as the signal level scale.

**!** If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the router you will need to reconfigure the wireless connection using the newly specified settings.

## Connecting to Web-based Interface

When you have configured your computer, you can access the web-based interface and configure needed parameters (create a WAN connection, change the parameters of the wireless network, specify the settings of the firewall, etc.).

1. Start a web browser (see the *Before You Begin* section, page 13).
2. In the address bar of the web browser, enter the IP address of the router (by default, the following IP address is specified: **192.168.0.1**). Press the **Enter** key.

Figure 15. Connecting to the web-based interface of the DIR-300 device.

3. On the opened page, enter the username (login) and password for the administrator account (by default, the following username and password are specified: **admin**, **admin**). Then click the **Enter** link.

Figure 16. The login page.

**!** If the error “The page cannot be displayed” (or “Unable to display the page”/“Could not connect to remote server”) occurs upon connecting to the web-based interface of the router, make sure that you have properly connected the router to your computer.

Right after the first access to the web-based interface you are forwarded to the page for changing the administrator password specified by default.

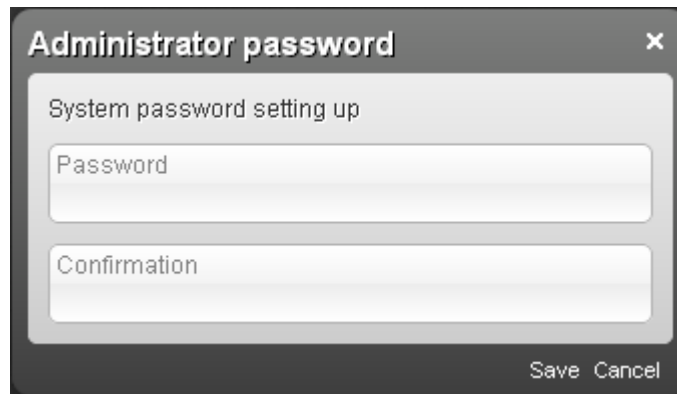

Figure 17. The page for changing the default administrator password.

Enter a new password in the **Password** and **Confirmation** fields (you may use digits, Latin letters (uppercase and/or lowercase), and characters available on the keyboard), then click the **Save** link.

Remember or write down the new password for the administrator account. In case of losing the new password, you can access the settings of the router only after restoring the factory default settings via the hardware **RESET** button. This procedure wipes out all settings that you have configured for your router.

## Web-based Interface Structure

After successful registration the router's quick settings page opens.

Figure 18. The quick settings page.

The page displays general information on the router and its software (the version and the date of the firmware, the IP address of the device, the name of the WLAN, etc.).

On the quick settings page you can run a needed Wizard, quickly get to some pages of the web-based interface, search for a specific page, or switch to the advanced settings section.

To upgrade the firmware of the router, left-click the current firmware version (the right column of the **Firmware version** line). After clicking the line, the **System / Firmware upgrade** page opens (for the detailed description of the page, see the *Firmware Upgrade* section, page 144).

To contact the technical support group (to send an e-mail), left-click the support e-mail address (the right column of the **Support** line). After clicking the line, the e-mail client window for sending a new letter to the specified address opens.

To edit the router's local interface parameters, left-click the IP or MAC address of the local interface (the right column of the **LAN IP** line or **LAN MAC** line correspondingly). After clicking the line, the page for editing the LAN interface opens (for the detailed description of the page, see the *LAN* section, page 96).

To configure the router's WLAN parameters, left-click the SSID of the WLAN (the right column of the **SSID** line). After clicking the line, the **Wi-Fi / Basic settings** page opens (for the detailed description of the page, see the *Basic Settings* section, page 99).

To configure connection to the Internet, click the **Click'n'Connect** link in the **Net** section (for the detailed description of the Wizard, see the *Click'n'Connect* section, page 32).

To configure the router's wireless network, click the **Wireless network settings wizard** link in the **Wi-Fi** section (for the detailed description of the Wizard, see the *Wireless Network Settings Wizard* section, page 64).

To configure access from the Internet to a web server located in your LAN, click the **Virtual server settings wizard** link in the **Firewall** section (for the detailed description of the Wizard, see the *Virtual Server Settings Wizard* section, page 70).

To configure all parameters of the router independently without the Wizards, click the **Advanced settings** link in the bottom right corner of the page.

Figure 19. The advanced settings page.

The pages of the **Status** section display data on the current state of the router (for the description of the pages, see the *Status* section, page 71).

The pages of the **Net** section are designed for configuring basic parameters of the LAN interface of the router and creating a connection to the Internet (for the description of the pages, see the *Net* section, page 75).

The pages of the **Wi-Fi** section are designed for specifying all needed settings of the router's wireless network (for the description of the pages, see the **Wi-Fi** section, page 98). Also you can enable or disable the device's WLAN directly from the advanced settings page. To enable the WLAN, select the **On** position () of the **Enable/Disable Wi-Fi** switch. To disable the WLAN, select the **Off** position () of the **Enable/Disable Wi-Fi** switch.

The pages of the **Advanced** section are designed for configuring additional parameters of the router (for the description of the pages, see the **Advanced** section, page 116).

The pages of the **Firewall** section are designed for configuring the firewall of the router (for the description of the pages, see the **Firewall** section, page 126).

The pages of the **Control** section are designed for creating restrictions on access to the Internet (for the description of the page, see the **Control** section, page 135).

The pages of the **System** section provide functions for managing the internal system of the router (for the description of the pages, see the **System** section, page 138).

Also you can find a specific page via search. To do this, enter the name of the page, wholly or partly, in the search bar in the top part of the web-based interface page, and then select a needed link in the search results.

Figure 20. The page displaying the search results.

The web-based interface of the router is multilingual. Select a needed language from the menu displayed when the mouse pointer is over the **Language** caption. You can change the language of the web-based interface in any menu item.

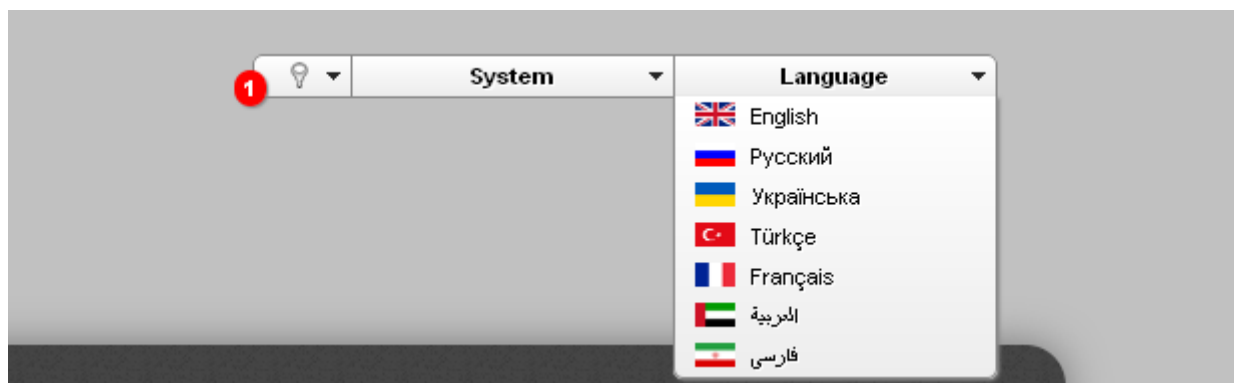

Figure 21. Changing the language of the web-based interface.

After selecting the language, the notification on unsaved changes will be displayed. Click the Save icon (  ) to save the current language of the web-based interface as the default language.

## Saving and Restoring Settings

**!** Note that you should regularly save the changes of the router's settings to the non-volatile memory.

The router's web-based interface displays the notification on unsaved changes at the top of the page.

Figure 22. The notification on unsaved changes.

Place the mouse pointer on the **Notifications** icon (  ) to view the list of unsaved changes and click the relevant link.

You can save the router's settings via the top-page menu displayed when the mouse pointer is over the **System** caption.

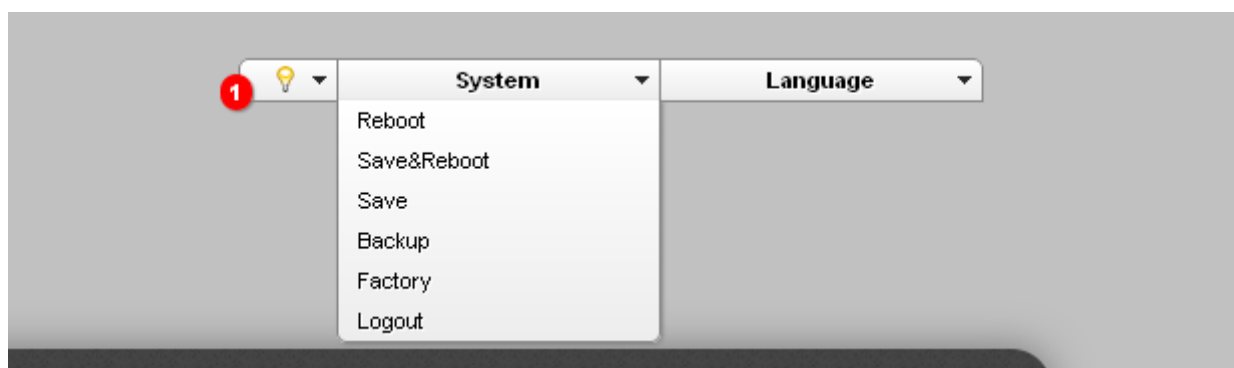

Figure 23. The top-page menu.

Click the **Reboot** line if you have already saved the router's settings.

Click the **Save&Reboot** line to save new settings and immediately reboot the router.

Click the **Save** line to save new settings to the non-volatile memory and continue configuring the device. Also you can save the device's parameters via the **Save** button on the **System / Configuration** page.

Click the **Backup** line and follow the dialog box appeared to save the configuration (all settings of the router) to your PC. Also you can save the router's configuration to your PC via the **Backup** button on the **System / Configuration** page.

Click the **Factory** line to restore the factory default settings. Also you can restore the factory defaults via the **Factory** button on the **System / Configuration** page.

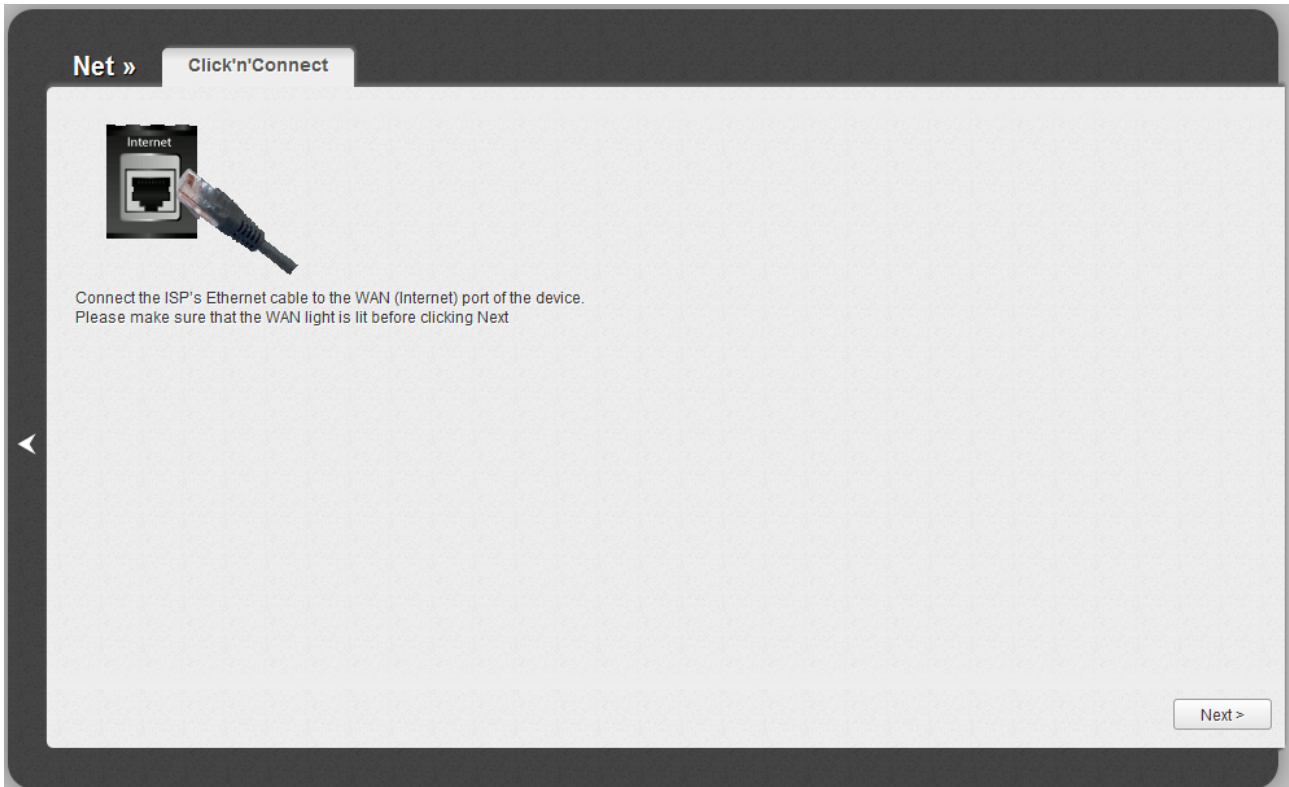

Also you can restore the factory default settings via the hardware **RESET** button. The hole of the button is located on the right side panel of the router. Use a small paperclip to activate the button; insert it into the hole (with the router turned on), push, and hold for 7 seconds. Then remove the paperclip. Wait for about 30 seconds. Now you can access the web-based interface of the router using the default IP address, username and password.

When you have configured all needed settings, click the **Logout** line.

## CHAPTER 4. CONFIGURING VIA WEB-BASED INTERFACE

### *Click'n'Connect*

To configure connection to the Internet, click the **Click'n'Connect** link in the **Net** section.

*Figure 24. Configuring connection to the Internet.*

Connect the Ethernet cable provided by your ISP to the WAN port of the router. Verify the relevant LED (the **Internet** LED should be on).

Click the **Next** button to continue.

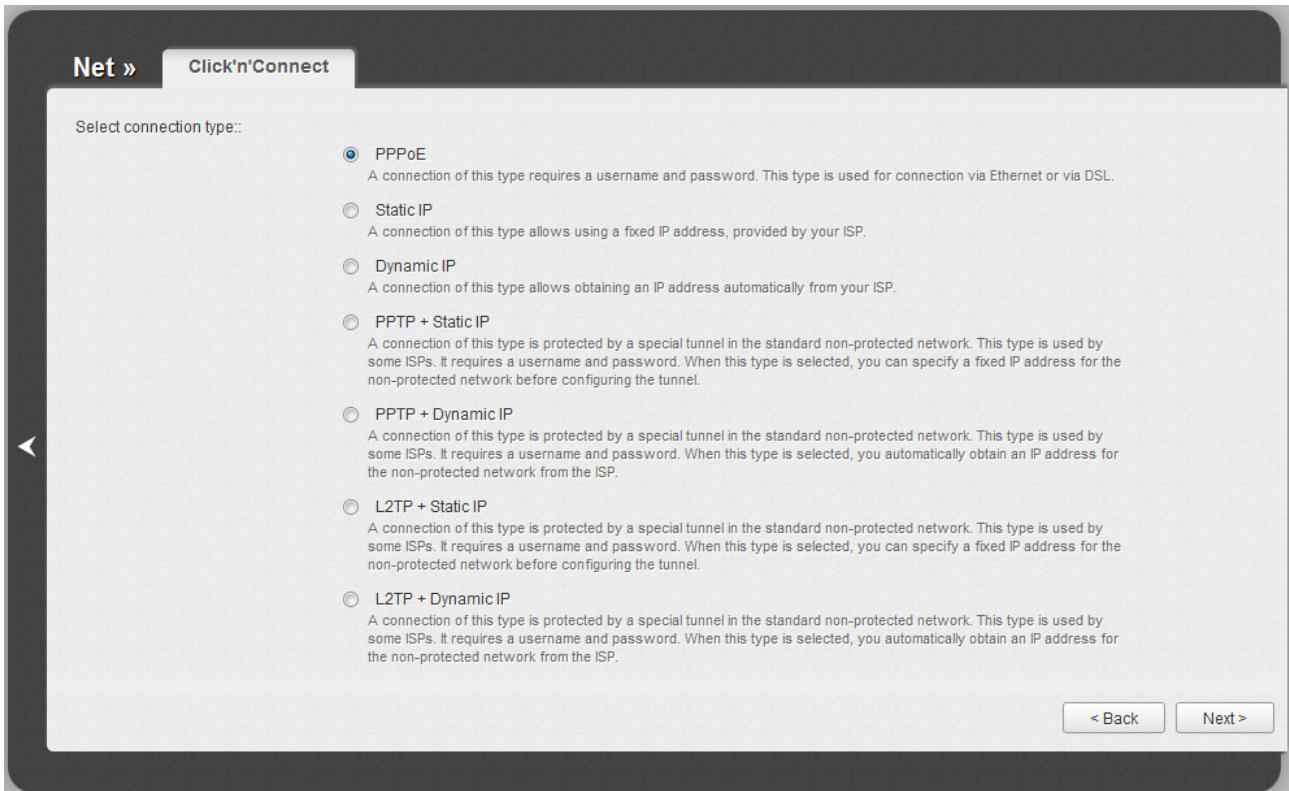

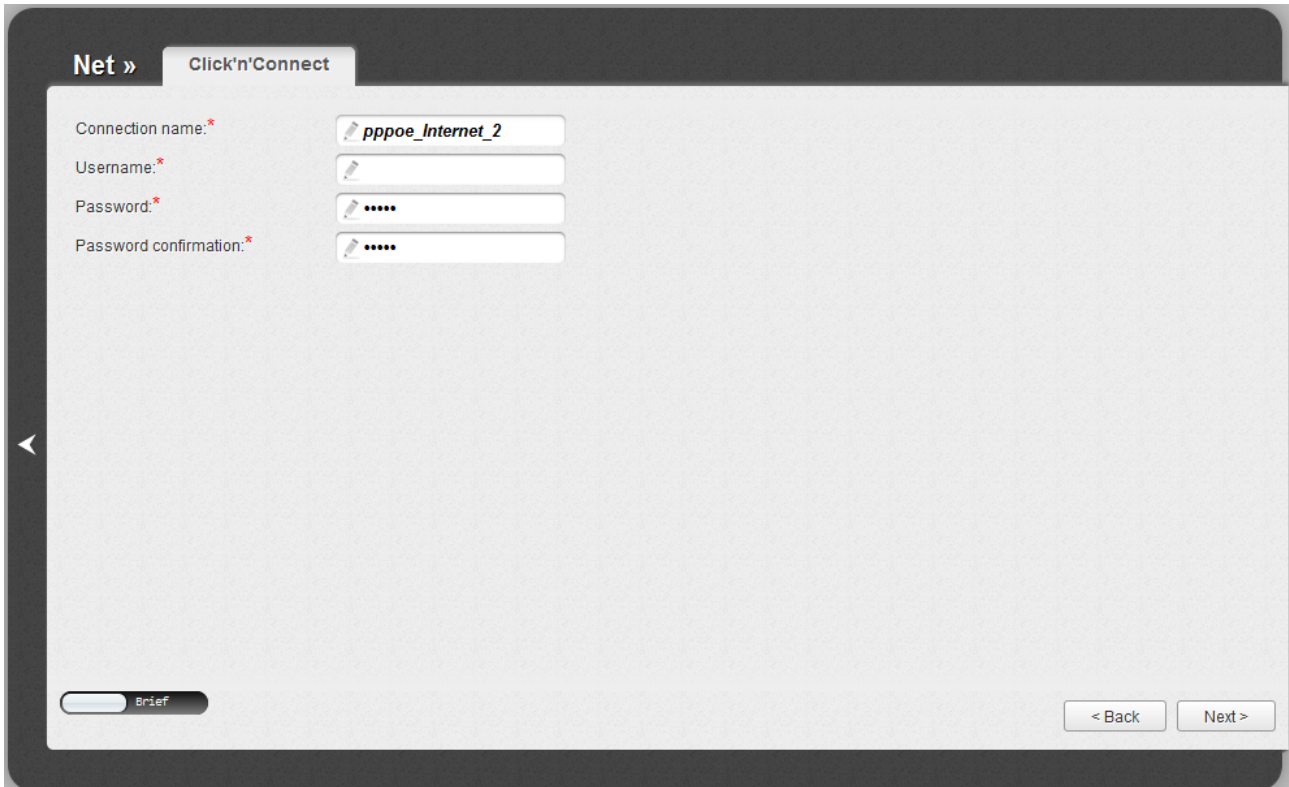

Figure 25. The page for selecting the connection type.

On the opened page, select the needed choice of the radio button and click the **Next** button.

## Creating WAN Connection

### PPPoE Connection

The screenshot displays the configuration page for a PPPoE WAN connection. At the top, there is a breadcrumb 'Net »' and a tab labeled 'Click'n'Connect'. Below this, there are four input fields, each with a red asterisk indicating a required field: 'Connection name:' (filled with 'pppoe\_Internet\_2'), 'Username:', 'Password:', and 'Password confirmation:'. Each field has a small icon to its left. At the bottom left, there is a 'Brief' switch. At the bottom right, there are two buttons: '< Back' and 'Next >'. A left-pointing arrow is visible on the left side of the interface.

Figure 26. Configuring PPPoE WAN connection.

In the **Connection name** field, specify a name for the connection for easier identification.

In the **Username** field, enter your login, and in the **Password** and **Password confirmation** fields – the password provided by your ISP.

As a rule, the specified settings are enough to configure a connection of the selected type. If you need to specify additional settings, open the expert settings mode. To do this, use the switch in the bottom left corner of the page.

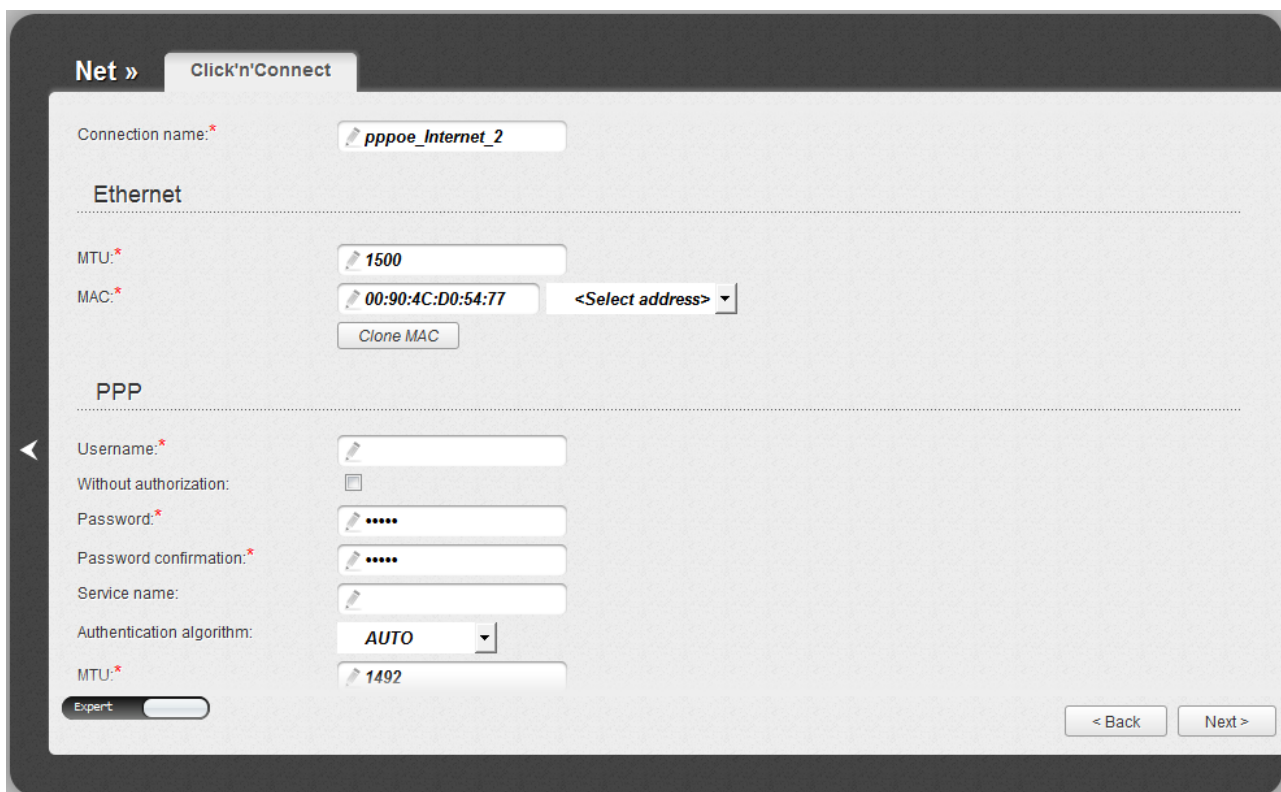

Figure 27. Configuring PPPoE WAN connection. The expert settings mode. The **Ethernet** section.

| Parameter              | Description   |
|------------------------|---|
| <b>Connection name</b> | A name for connection for easier identification.  |
| <b>Ethernet</b>        |   |
| <b>MTU</b>             | The maximum size of units transmitted by the interface.   |
| <b>MAC</b>             | <p>A MAC address assigned to the interface. This parameter is mandatory if your ISP uses MAC address binding. In the field, enter the MAC address registered by your ISP upon concluding the agreement.</p> <p>You can click the <b>Clone MAC Address</b> button () to set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface.</p> <p>Also you can set the address of a device connected to the router's LAN at the moment. To do this, select the relevant value from the drop-down list (the field will be filled in automatically).</p> |

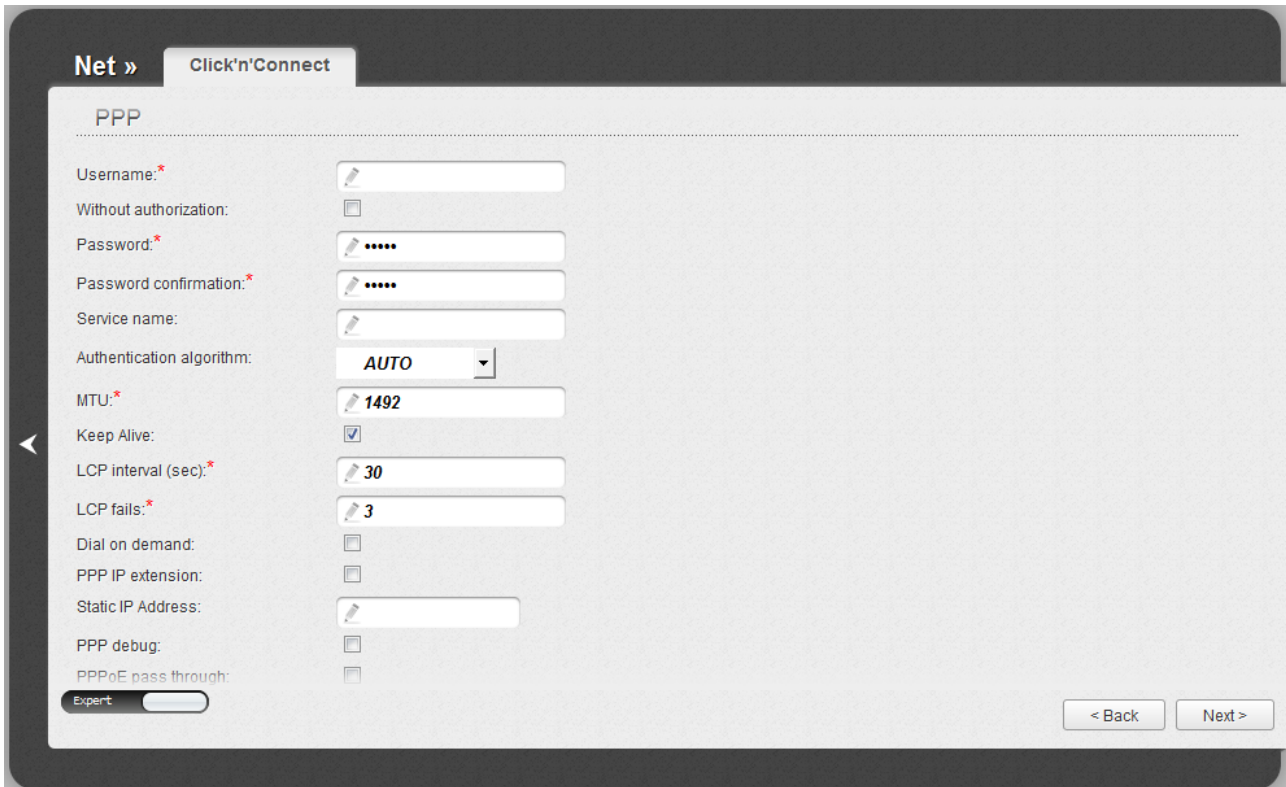

Figure 28. Configuring PPPoE WAN connection. The expert settings mode. The **PPP** section.

| Parameter                       | Description  |
|---------------------------------|--|
| <b>PPP</b>                      |  |
| <b>Username</b>                 | A username (login) to access the Internet.   |
| <b>Without authorization</b>    | Select the checkbox if you don't need to enter a username and password to access the Internet.   |
| <b>Password</b>                 | A password to access the Internet.   |
| <b>Password confirmation</b>    | The confirmation of the entered password (to avoid mistypes).  |
| <b>Service name</b>             | The name of the PPPoE authentication server.   |
| <b>Authentication algorithm</b> | Select a required authentication method from the drop-down list or leave the <b>AUTO</b> value.  |
| <b>MTU</b>                      | The maximum size of units transmitted by the interface.  |
| <b>Keep Alive</b>               | Select the checkbox if you want the router to keep you connected to your ISP even when the connection has been inactive for a specified period of time. When the checkbox is selected, the <b>LCP interval</b> and <b>LCP fails</b> fields are available. Specify the required values. |

| Parameter                 | Description   |
|---------------------------|---|
| <b>Dial on demand</b>     | Select the checkbox if you want the router to establish connection to the Internet on demand. In the <b>Maximum idle time</b> field, specify a period of inactivity (in seconds) after which the connection should be terminated. |
| <b>PPP IP extension</b>   | This option is used by some ISPs. Contact your ISP to clarify if this checkbox needs to be enabled.   |
| <b>Static IP Address</b>  | Fill in the field if you want to use a static IP address to access the Internet.  |
| <b>PPP debug</b>          | Select the checkbox if you want to log all data on PPP connection debugging.  |
| <b>PPPoE pass through</b> | Select the checkbox if you want to allow PPPoE clients of computers from your LAN to connect to the Internet through this PPPoE connection of the router.   |

Figure 29. Configuring PPPoE WAN connection. The expert settings mode. The **Miscellaneous** section.

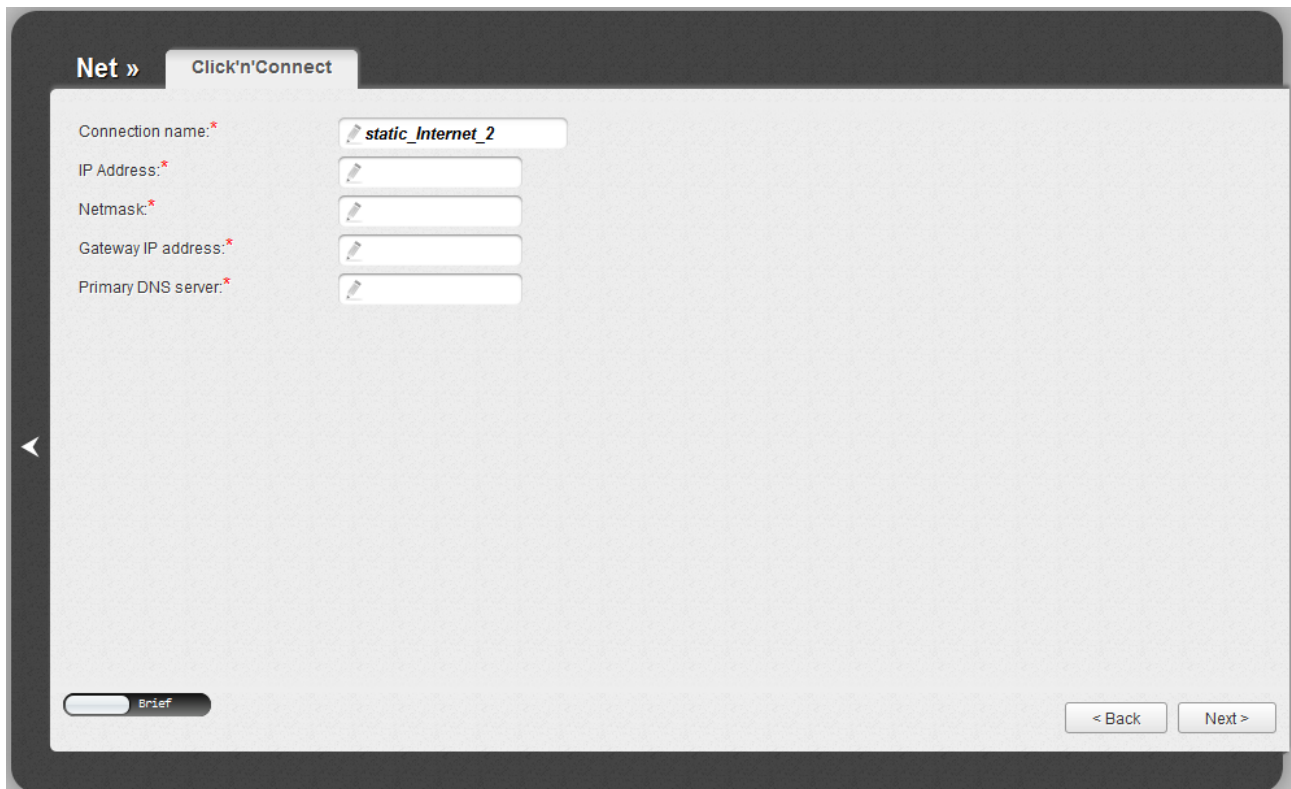

| Parameter                    | Description   |
|------------------------------|---|
| <b>Miscellaneous</b>         |   |
| <b>Enable RIP</b>            | Select the checkbox to allow using RIP for this connection.   |
| <b>Enable IGMP Multicast</b> | Select the checkbox to allow multicast traffic from the external network (e.g. video streaming) to be received.   |
| <b>NAT</b>                   | Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.  |
| <b>Firewall</b>              | Select the checkbox to enable protection against ARP and DDoS attacks.  |
| <b>Ping</b>                  | Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox. |

Click the **Next** button to continue.

After that the page displaying all specified settings opens. Click the **Apply** button to create the connection or the **Back** button to specify other settings.

After clicking the **Apply** button, the page for checking the Internet availability opens (see the **Checking Internet Availability** section, page 62).

## Static IP Connection

The screenshot shows the 'Static IP Connection' configuration page. At the top left, there is a breadcrumb 'Net »' and a tab 'Click'n'Connect'. The main area contains five input fields, each with a red asterisk indicating it is required: 'Connection name:' with the value 'static\_Internet\_2', 'IP Address:', 'Netmask:', 'Gateway IP address:', and 'Primary DNS server:'. Each field has a small icon to its right. At the bottom left, there is a switch labeled 'Brief'. At the bottom right, there are two buttons: '< Back' and 'Next >'.

Figure 30. Configuring Static IP WAN connection.

In the **Connection name** field, specify a name for the connection for easier identification.

Fill in the **IP Address** and **Netmask** fields.

In the **Gateway IP address** field, enter the IP address of the gateway used by this WAN connection.

In the **Primary DNS server** field, enter the address of the primary DNS server.

As a rule, the specified settings are enough to configure a connection of the selected type. If you need to specify additional settings, open the expert settings mode. To do this, use the switch in the bottom left corner of the page.

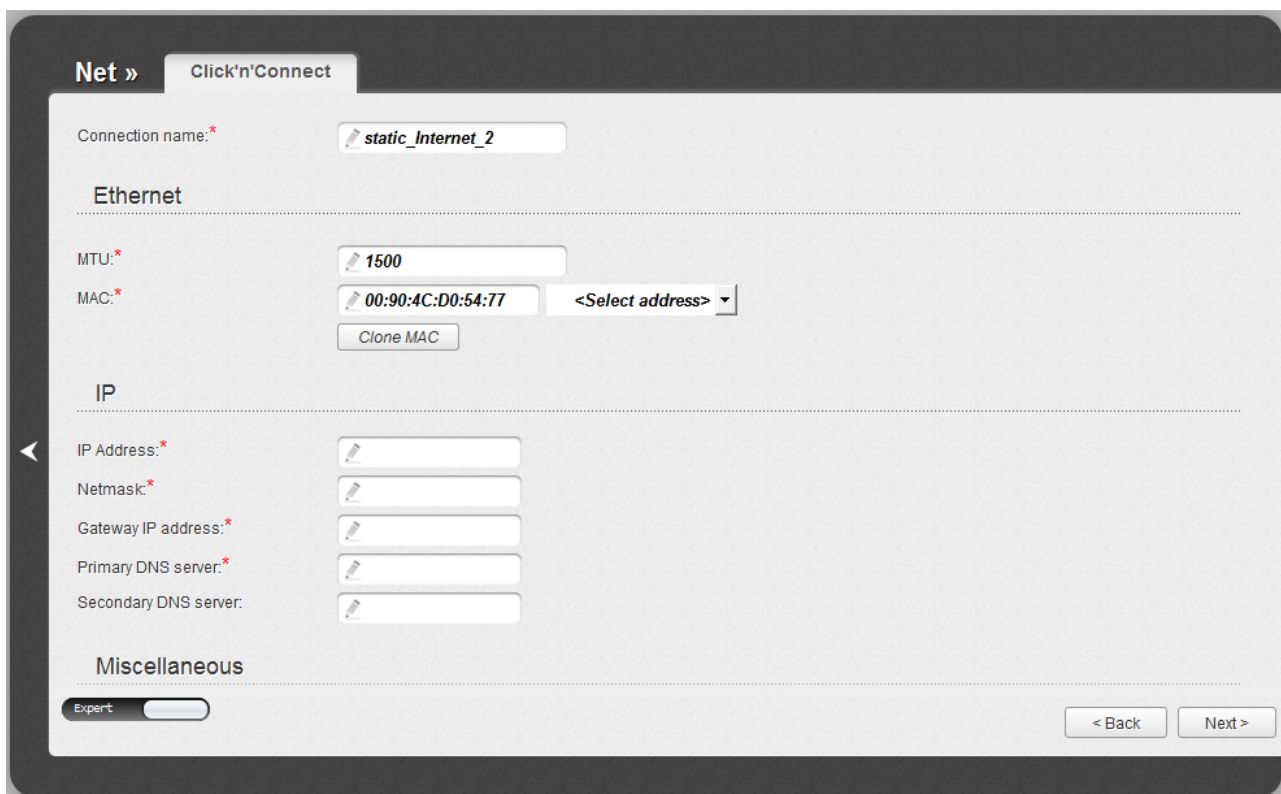

Figure 31. Configuring Static IP WAN connection. The expert settings mode. The **Ethernet** section.

| Parameter              | Description   |
|------------------------|---|
| <b>Connection name</b> | A name for connection for easier identification.  |
| <b>Ethernet</b>        |   |
| <b>MTU</b>             | The maximum size of units transmitted by the interface.   |
| <b>MAC</b>             | <p>A MAC address assigned to the interface. This parameter is mandatory if your ISP uses MAC address binding. In the field, enter the MAC address registered by your ISP upon concluding the agreement.</p> <p>You can click the <b>Clone MAC Address</b> button () to set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface.</p> <p>Also you can set the address of a device connected to the router's LAN at the moment. To do this, select the relevant value from the drop-down list (the field will be filled in automatically).</p> |

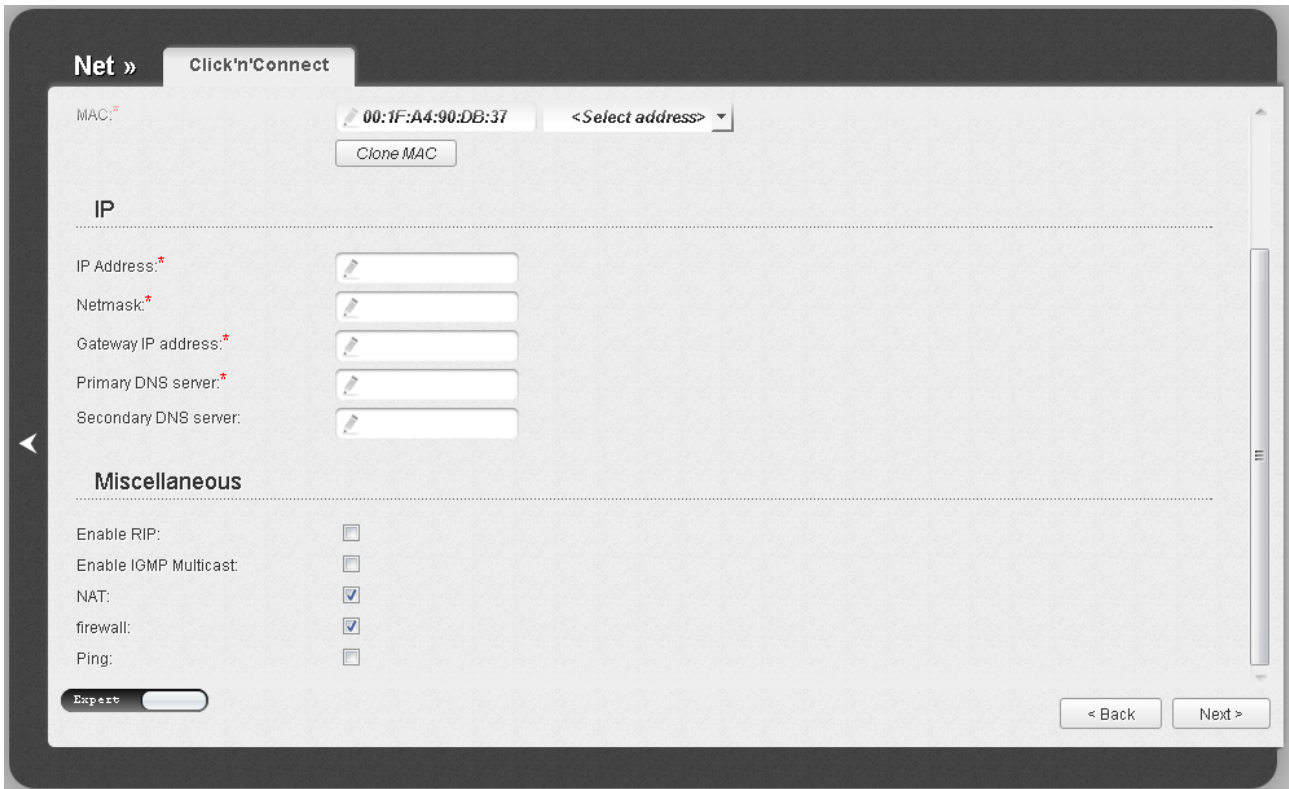

Figure 32. Configuring Static IP WAN connection. The expert settings mode. The **IP** and **Miscellaneous** sections.

| Parameter   | Description   |
|---|---|
| <b>IP</b>   |   |
| <b>IP Address</b>                                   | Enter an IP address for this WAN connection.  |
| <b>Netmask</b>                                      | Enter a subnet mask for this WAN connection.  |
| <b>Gateway IP address</b>                           | Enter an IP address of the gateway used by this WAN connection.   |
| <b>Primary DNS server/<br/>Secondary DNS server</b> | Enter addresses of the primary and secondary DNS servers in the relevant fields.                                |
| <b>Miscellaneous</b>                                |   |
| <b>Enable RIP</b>                                   | Select the checkbox to allow using RIP for this connection.   |
| <b>Enable IGMP Multicast</b>                        | Select the checkbox to allow multicast traffic from the external network (e.g. video streaming) to be received. |
| <b>NAT</b>  | Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.                    |
| <b>Firewall</b>                                     | Select the checkbox to enable protection against ARP and DDoS attacks.  |

| Parameter   | Description   |
|-------------|---|
| <b>Ping</b> | Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox. |

Click the **Next** button to continue.

After that the page displaying all specified settings opens. Click the **Apply** button to create the connection or the **Back** button to specify other settings.

After clicking the **Apply** button, the page for checking the Internet availability opens (see the *Checking Internet Availability* section, page 62).

## Dynamic IP Connection

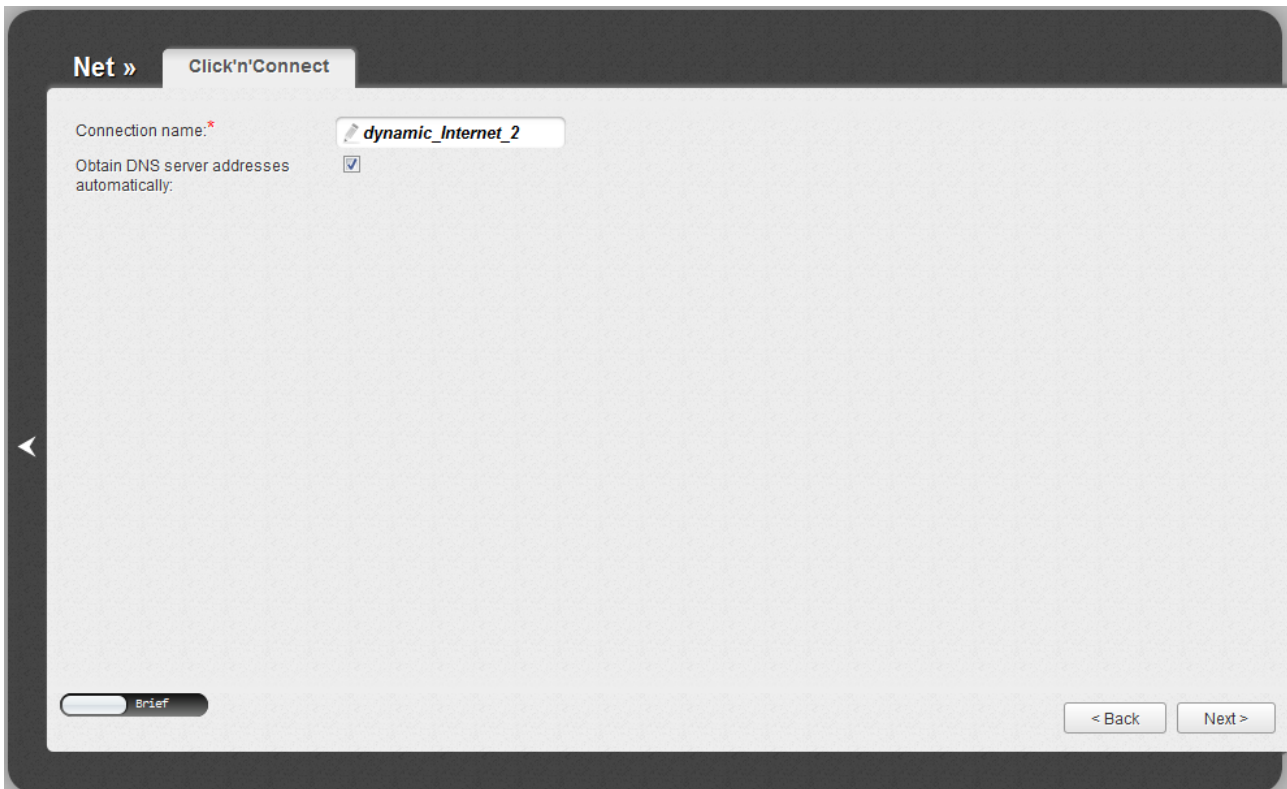

Figure 33. Configuring Dynamic IP WAN connection.

In the **Connection name** field, specify a name for the connection for easier identification.

If your ISP has provided the addresses of the DNS servers, deselect the **Obtain DNS server addresses automatically** checkbox and fill in the **Primary DNS server** field.

As a rule, the specified settings are enough to configure a connection of the selected type. If you need to specify additional settings, open the expert settings mode. To do this, use the switch in the bottom left corner of the page.

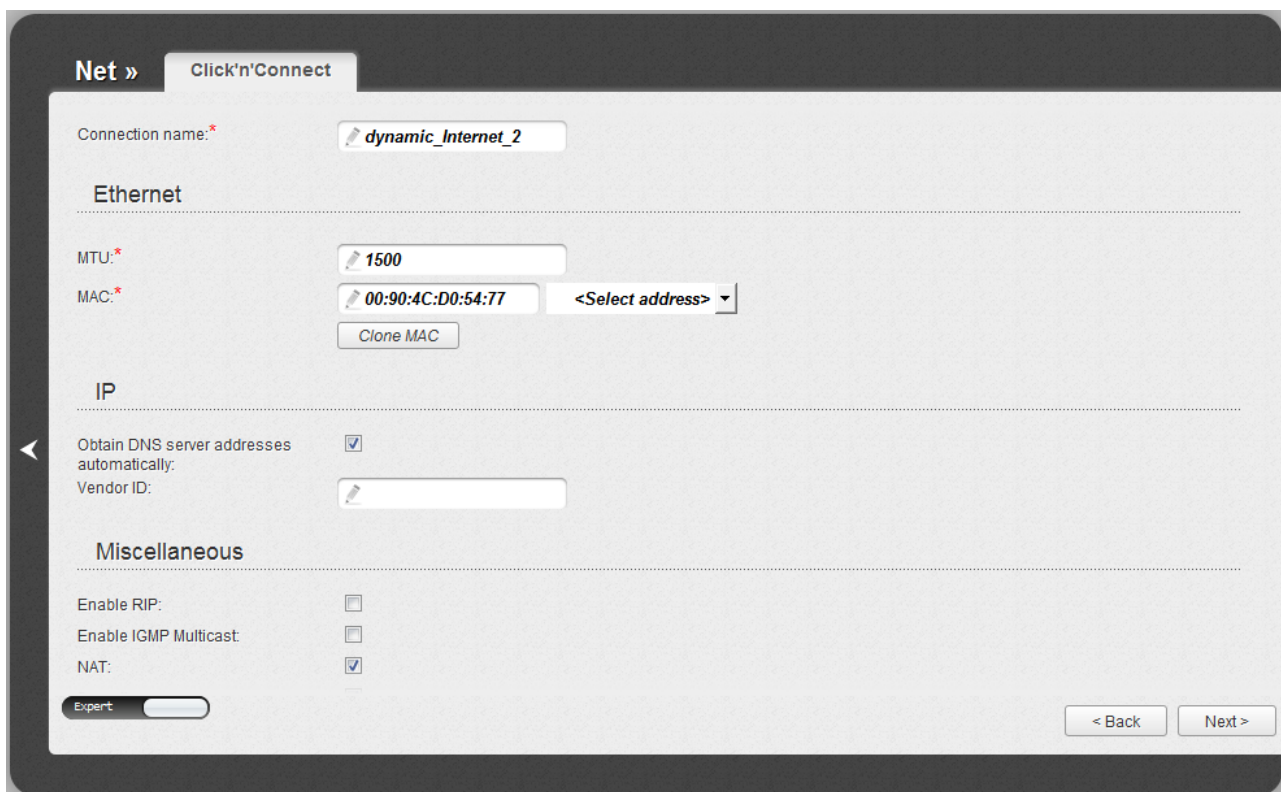

Figure 34. Configuring Dynamic IP WAN connection. The expert settings mode. The **Ethernet** section.

| Parameter              | Description   |
|------------------------|---|
| <b>Connection name</b> | A name for connection for easier identification.  |
| <b>Ethernet</b>        |   |
| <b>MTU</b>             | The maximum size of units transmitted by the interface.   |
| <b>MAC</b>             | <p>A MAC address assigned to the interface. This parameter is mandatory if your ISP uses MAC address binding. In the field, enter the MAC address registered by your ISP upon concluding the agreement.</p> <p>You can click the <b>Clone MAC Address</b> button (  ) to set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface.</p> <p>Also you can set the address of a device connected to the router's LAN at the moment. To do this, select the relevant value from the drop-down list (the field will be filled in automatically).</p> |

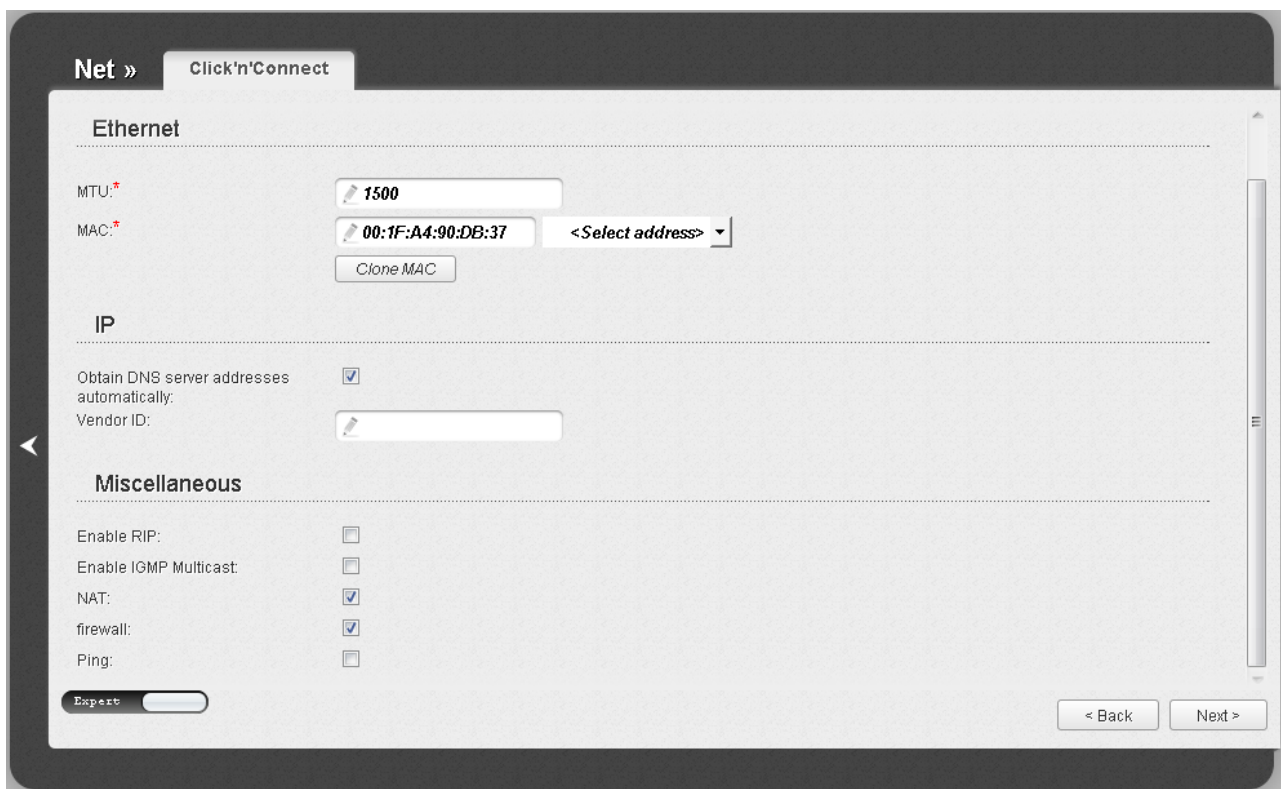

Figure 35. Configuring Dynamic IP WAN connection. The expert settings mode. The **IP** and **Miscellaneous** sections.

| Parameter   | Description   |
|---|---|
| <b>IP</b>   |   |
| <b>Obtain DNS server addresses automatically</b>    | Select the checkbox to configure automatic assignment of DNS server addresses. If the checkbox is selected, the <b>Primary DNS server</b> and <b>Secondary DNS server</b> fields are not displayed. |
| <b>Primary DNS server/<br/>Secondary DNS server</b> | Enter addresses of the primary and secondary DNS servers in the relevant fields.  |
| <b>Vendor ID</b>                                    | The identifier of your ISP. <i>Optional.</i>  |
| <b>Miscellaneous</b>                                |   |
| <b>Enable RIP</b>                                   | Select the checkbox to allow using RIP for this connection.   |
| <b>Enable IGMP Multicast</b>                        | Select the checkbox to allow multicast traffic from the external network (e.g. video streaming) to be received.   |
| <b>NAT</b>  | Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.  |
| <b>Firewall</b>                                     | Select the checkbox to enable protection against ARP and DDoS attacks.  |

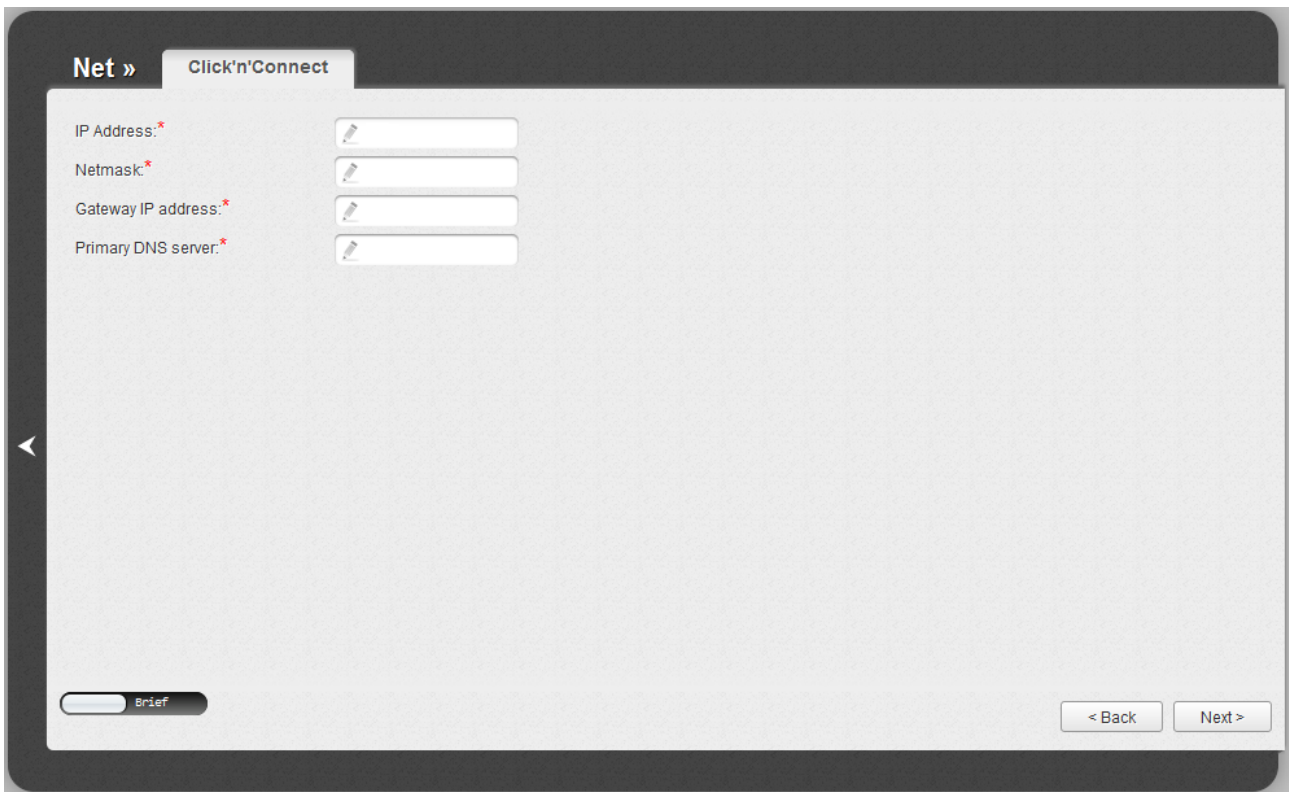

| Parameter   | Description   |
|-------------|---|
| <b>Ping</b> | Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox. |

Click the **Next** button to continue.

After that the page displaying all specified settings opens. Click the **Apply** button to create the connection or the **Back** button to specify other settings.

After clicking the **Apply** button, the page for checking the Internet availability opens (see the *Checking Internet Availability* section, page 62).

## PPTP + Static IP or L2TP + Static IP Connection

The screenshot displays a configuration page titled "Net »" with a sub-tab "Click'n'Connect". It features four input fields, each with a red asterisk indicating a required field: "IP Address:", "Netmask:", "Gateway IP address:", and "Primary DNS server:". Each field is accompanied by a small pencil icon. At the bottom left, there is a "Brief" switch. At the bottom right, there are two buttons: "< Back" and "Next >".

Figure 36. Configuring PPTP + Static IP WAN connection.

Fill in the **IP Address** and **Netmask** fields.

In the **Gateway IP address** field, enter the IP address of the gateway used by this WAN connection.

In the **Primary DNS server** field, enter the address of the primary DNS server.

As a rule, the specified settings are enough to configure a non-protected connection of the selected type. If you need to specify additional settings, open the expert settings mode. To do this, use the switch in the bottom left corner of the page.

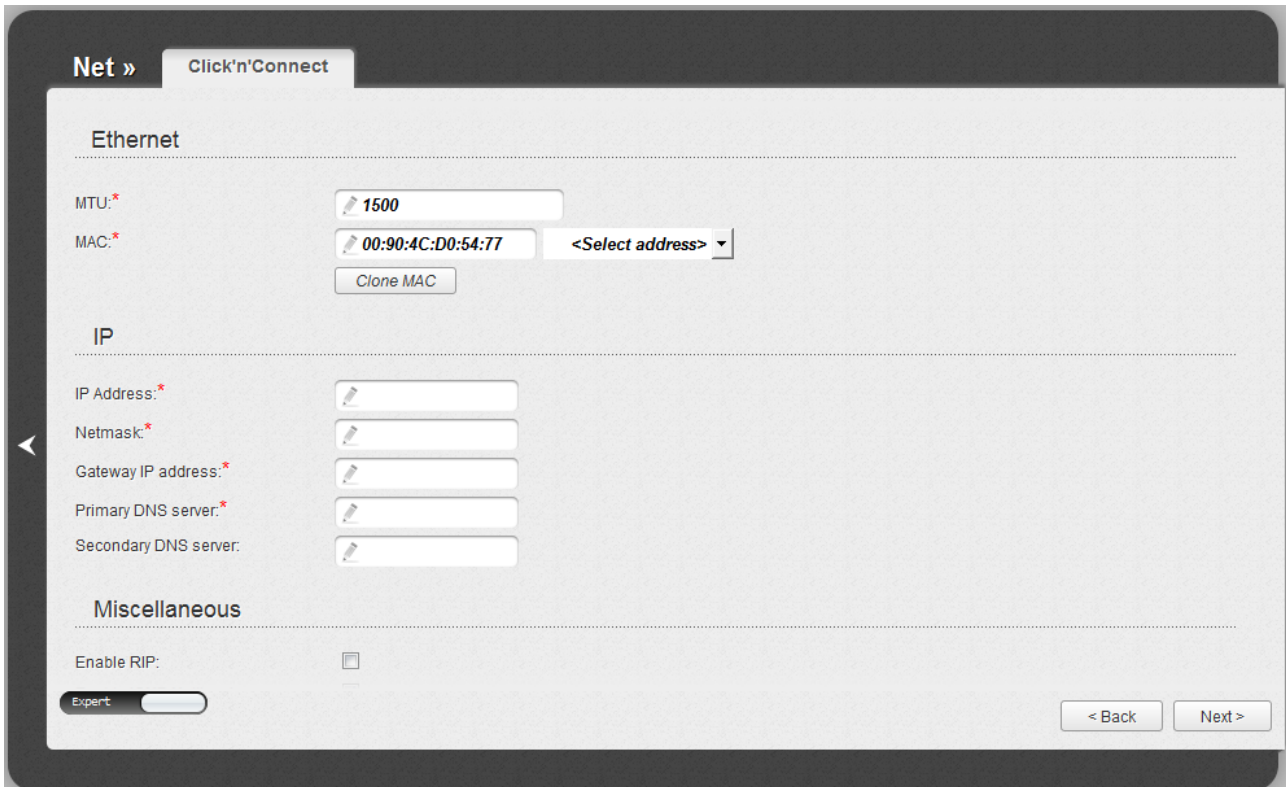

Figure 37. Configuring PPTP + Static IP WAN connection. The expert settings mode. The **Ethernet** section.

| Parameter       | Description   |
|-----------------|---|
| <b>Ethernet</b> |   |
| <b>MTU</b>      | The maximum size of units transmitted by the interface.   |
| <b>MAC</b>      | <p>A MAC address assigned to the interface. This parameter is mandatory if your ISP uses MAC address binding. In the field, enter the MAC address registered by your ISP upon concluding the agreement.</p> <p>You can click the <b>Clone MAC Address</b> button () to set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface.</p> <p>Also you can set the address of a device connected to the router's LAN at the moment. To do this, select the relevant value from the drop-down list (the field will be filled in automatically).</p> |

| Parameter   | Description   |
|---|---|
| <b>IP</b>   |   |
| <b>IP Address</b>                                   | Enter an IP address for this WAN connection.  |
| <b>Netmask</b>                                      | Enter a subnet mask for this WAN connection.  |
| <b>Gateway IP address</b>                           | Enter an IP address of the gateway used by this WAN connection.   |
| <b>Primary DNS server/<br/>Secondary DNS server</b> | Enter addresses of the primary and secondary DNS servers in the relevant fields.                                |
| <b>Miscellaneous</b>                                |   |
| <b>Enable RIP</b>                                   | Select the checkbox to allow using RIP for this connection.   |
| <b>Enable IGMP Multicast</b>                        | Select the checkbox to allow multicast traffic from the external network (e.g. video streaming) to be received. |
| <b>NAT</b>  | Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.                    |
| <b>Firewall</b>                                     | Select the checkbox to enable protection against ARP and DDoS attacks.  |

| Parameter   | Description   |
|-------------|---|
| <b>Ping</b> | Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox. |

Click the **Next** button to continue.

If needed, enter the IP addresses of the ISP's local resources.

Figure 39. Configuring PPTP + Static IP WAN connection.

Click the **Next** button to continue.

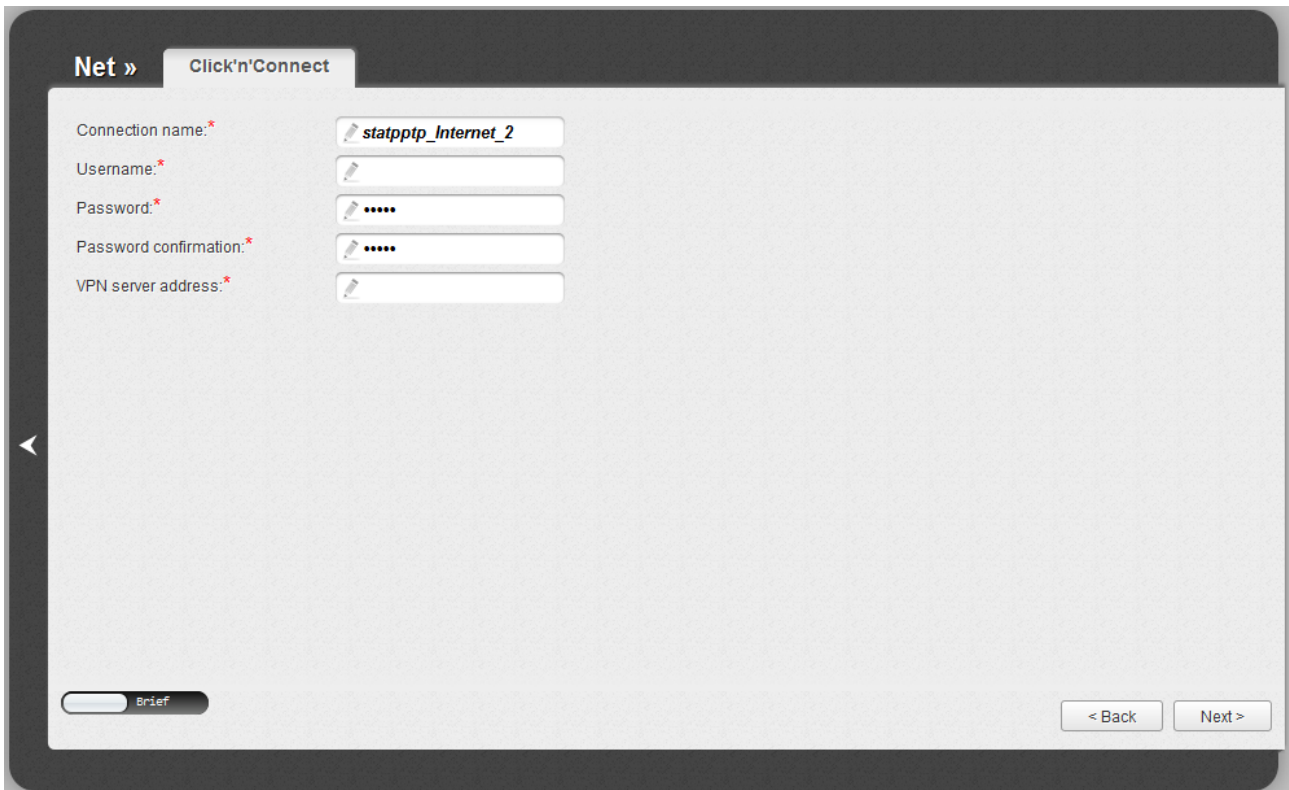

Figure 40. Configuring PPTP + Static IP WAN connection.

In the **Connection name** field, specify a name for the connection for easier identification.

In the **Username** field, enter your login, and in the **Password** and **Password confirmation** fields – the password provided by your ISP.

In the **VPN server address** field, enter the IP or URL address of the PPTP or L2TP authentication server.

As a rule, the specified settings are enough to configure a protected connection (the VPN tunnel). If you need to specify additional settings, open the expert settings mode. To do this, use the switch in the bottom left corner of the page.

Figure 41. Configuring PPTP + Static IP WAN connection. The expert settings mode. The VPN section.

| Parameter                    | Description  |
|------------------------------|--|
| <b>Connection name</b>       | A name for connection for easier identification.   |
| <b>VPN</b>                   |  |
| <b>Connect automatically</b> | Select the checkbox to enable auto-start of the connection upon the boot-up of the router.     |
| <b>Username</b>              | A username (login) to access the Internet.   |
| <b>Without authorization</b> | Select the checkbox if you don't need to enter a username and password to access the Internet. |
| <b>Password</b>              | A password to access the Internet.   |
| <b>Password confirmation</b> | The confirmation of the entered password (to avoid mistypes).                                  |
| <b>VPN server address</b>    | The IP or URL address of the PPTP or L2TP authentication server.                               |

| Parameter                       | Description  |
|---------------------------------|--|
| <b>Encryption</b>               | <p>Select a method of MPPE encryption.</p> <ul style="list-style-type: none"> <li>• <b>No encrypt:</b> MPPE encryption is not applied.</li> <li>• <b>MPPE 40/128 bit:</b> MPPE encryption with a 40-bit or 128-bit key is applied.</li> <li>• <b>MPPE 40 bit:</b> MPPE encryption with a 40-bit key is applied.</li> <li>• <b>MPPE 128 bit:</b> MPPE encryption with a 128-bit key is applied.</li> </ul> <p>MPPE encryption can be applied only if the <b>MS-CHAP</b>, <b>MS-CHAP-V2</b>, or <b>AUTO</b> value is selected from the <b>Authentication algorithm</b> drop-down list.</p> |
| <b>Authentication algorithm</b> | <p>Select a required authentication method from the drop-down list or leave the <b>AUTO</b> value.</p>   |
| <b>MTU</b>                      | <p>The maximum size of units transmitted by the interface.</p>   |
| <b>Keep Alive</b>               | <p>Select the checkbox if you want the router to keep you connected to your ISP even when the connection has been inactive for a specified period of time. When the checkbox is selected, the <b>LCP interval</b> and <b>LCP fails</b> fields are available. Specify the required values.</p>  |
| <b>Extra options</b>            | <p>Advanced options of the pppd daemon which need to be specified for this connection. <i>Optional.</i></p>  |
| <b>Dial on demand</b>           | <p>Select the checkbox if you want the router to establish connection to the Internet on demand. In the <b>Maximum idle time</b> field, specify a period of inactivity (in seconds) after which the connection should be terminated.</p>   |
| <b>Static IP Address</b>        | <p>Fill in the field if you want to use a static IP address to access the Internet.</p>  |
| <b>PPP debug</b>                | <p>Select the checkbox if you want to log all data on PPP connection debugging.</p>  |
| <b>IP received</b>              | <p>The IP address assigned by the ISP.</p>   |

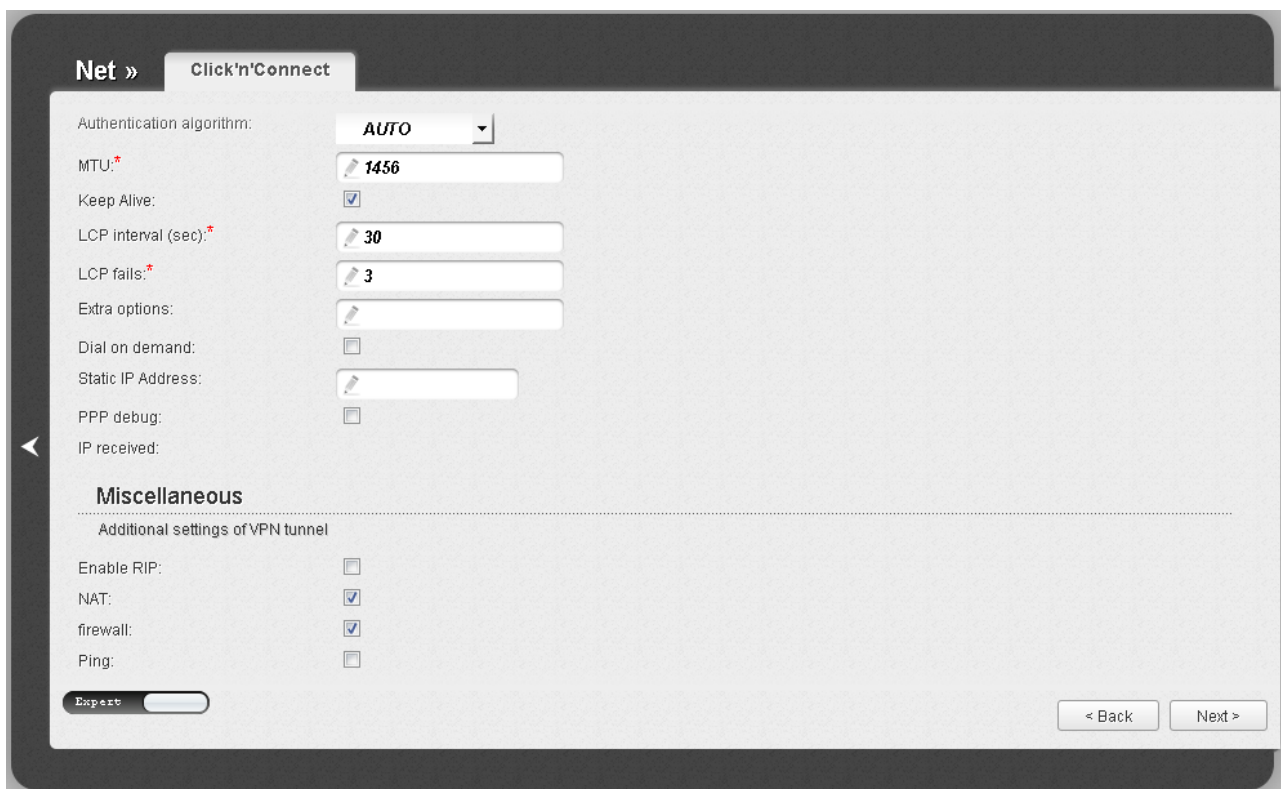

Figure 42. Configuring PPTP + Static IP WAN connection. The expert settings mode. The **Miscellaneous** section.

| Parameter            | Description   |
|----------------------|---|
| <b>Miscellaneous</b> |   |
| <b>Enable RIP</b>    | Select the checkbox to allow using RIP for this connection.   |
| <b>NAT</b>           | Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.  |
| <b>Firewall</b>      | Select the checkbox to enable protection against ARP and DDoS attacks.  |
| <b>Ping</b>          | Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox. |

Click the **Next** button to continue.

After that the page displaying all specified settings opens. Click the **Apply** button to create the connection or the **Back** button to specify other settings.

After clicking the **Apply** button, the page for checking the Internet availability opens (see the **Checking Internet Availability** section, page 62).

## ***PPTP + Dynamic IP or L2TP + Dynamic IP Connection***

*Figure 43. Configuring PPTP + Dynamic IP WAN connection.*

If your ISP has provided the addresses of the DNS servers, deselect the **Obtain DNS server addresses automatically** checkbox and fill in the **Primary DNS server** field.

As a rule, the specified settings are enough to configure a non-protected connection of the selected type. If you need to specify additional settings, open the expert settings mode. To do this, use the switch in the bottom left corner of the page.

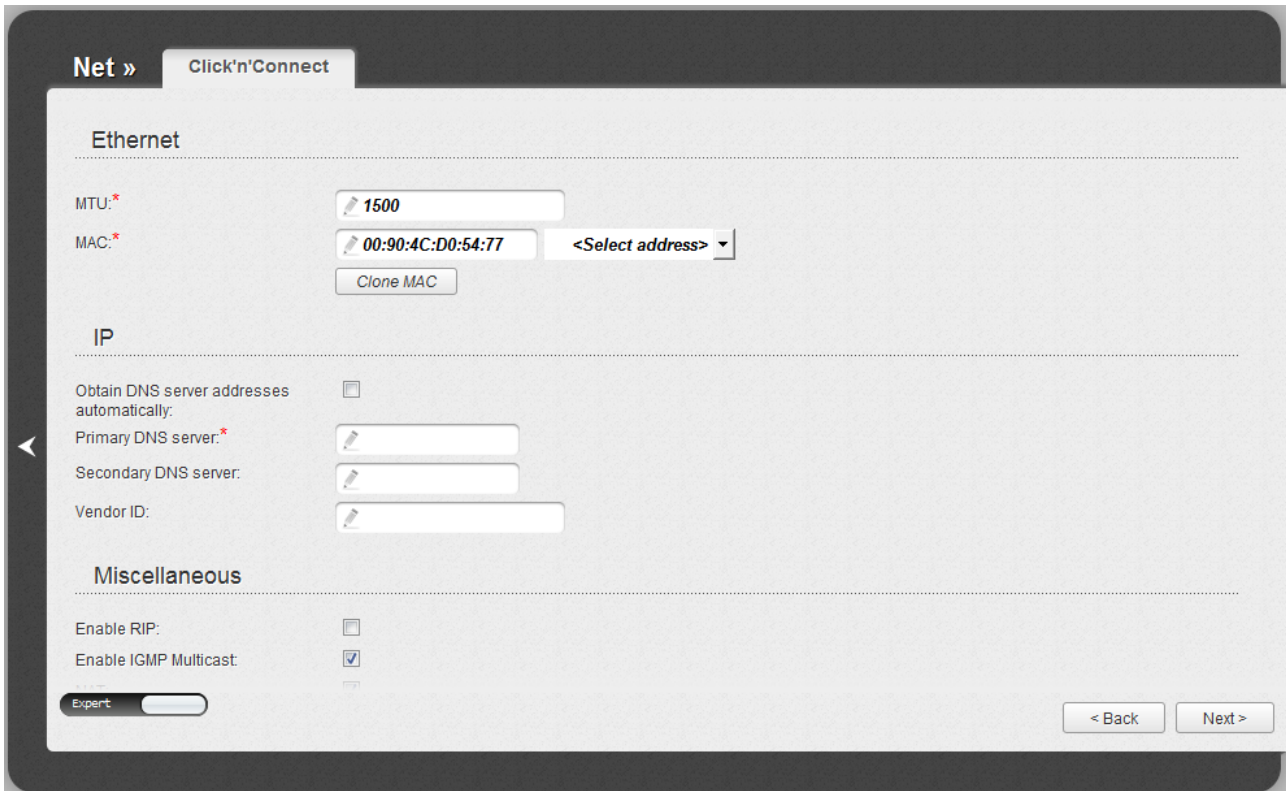

Figure 44. Configuring PPTP + Dynamic IP WAN connection. The expert settings mode. The **Ethernet** section.

| Parameter       | Description   |
|-----------------|---|
| <b>Ethernet</b> |   |
| <b>MTU</b>      | The maximum size of units transmitted by the interface.   |
| <b>MAC</b>      | <p>A MAC address assigned to the interface. This parameter is mandatory if your ISP uses MAC address binding. In the field, enter the MAC address registered by your ISP upon concluding the agreement.</p> <p>You can click the <b>Clone MAC Address</b> button () to set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface.</p> <p>Also you can set the address of a device connected to the router's LAN at the moment. To do this, select the relevant value from the drop-down list (the field will be filled in automatically).</p> |

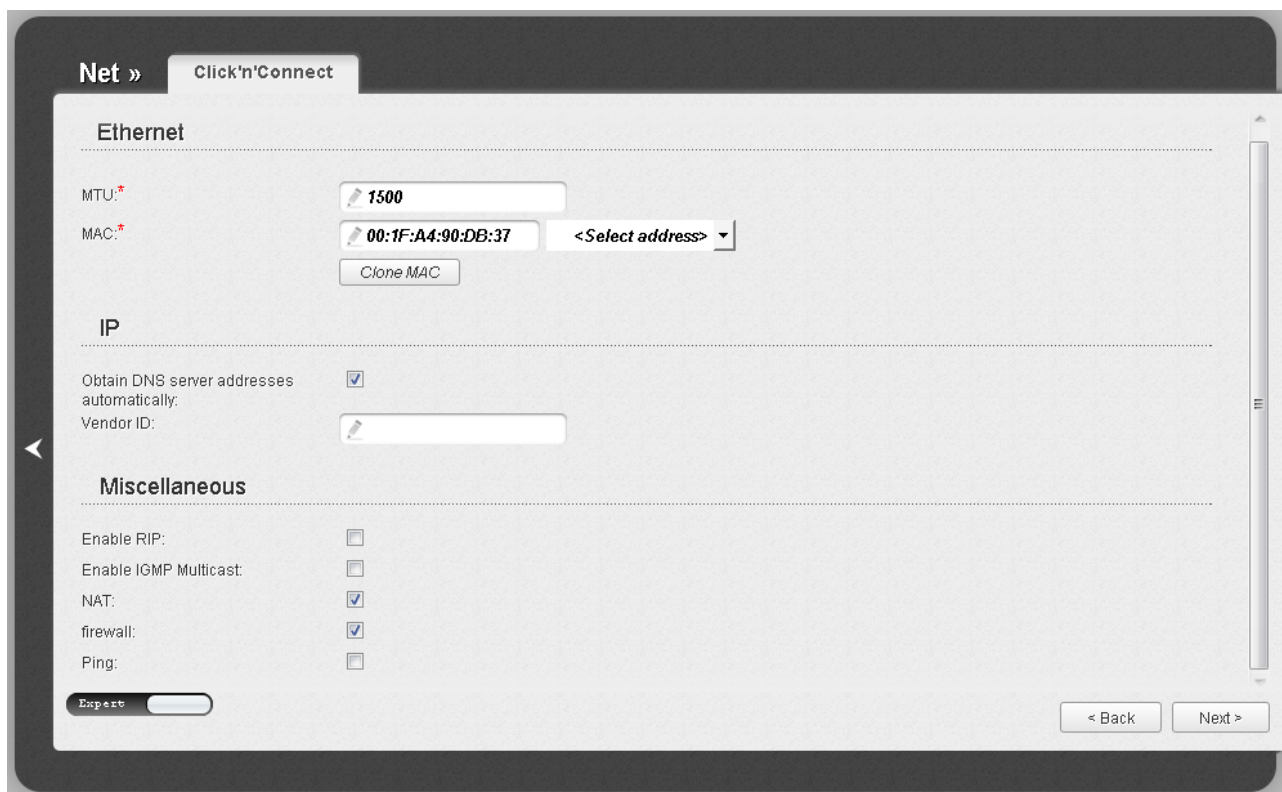

Figure 45. Configuring PPTP + Dynamic IP WAN connection. The expert settings mode. The **IP** and **Miscellaneous** sections.

| Parameter   | Description   |
|---|---|
| <b>IP</b>   |   |
| <b>Obtain DNS server addresses automatically</b>    | Select the checkbox to configure automatic assignment of DNS server addresses. If the checkbox is selected, the <b>Primary DNS server</b> and <b>Secondary DNS server</b> fields are not displayed. |
| <b>Primary DNS server/<br/>Secondary DNS server</b> | Enter addresses of the primary and secondary DNS servers in the relevant fields.  |
| <b>Vendor ID</b>                                    | The identifier of your ISP. <i>Optional.</i>  |
| <b>Miscellaneous</b>                                |   |
| <b>Enable RIP</b>                                   | Select the checkbox to allow using RIP for this connection.   |
| <b>Enable IGMP Multicast</b>                        | Select the checkbox to allow multicast traffic from the external network (e.g. video streaming) to be received.   |
| <b>NAT</b>  | Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.  |
| <b>Firewall</b>                                     | Select the checkbox to enable protection against ARP and DDoS attacks.  |

| Parameter   | Description   |
|-------------|---|
| <b>Ping</b> | Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox. |

Click the **Next** button to continue.

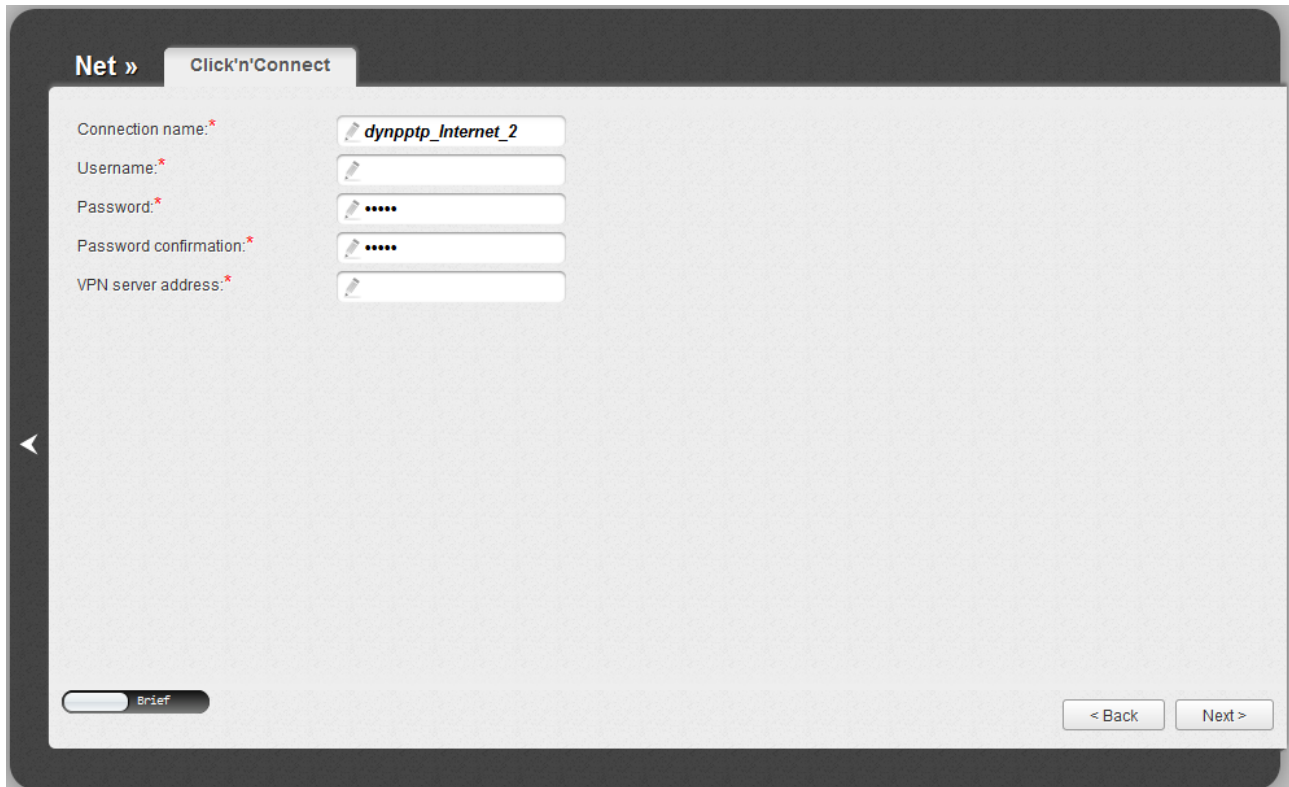

Figure 46. Configuring PPTP + Dynamic IP WAN connection.

In the **Connection name** field, specify a name for the connection for easier identification.

In the **Username** field, enter your login, and in the **Password** and **Password confirmation** fields – the password provided by your ISP.

In the **VPN server address** field, enter the IP or URL address of the PPTP or L2TP authentication server.

As a rule, the specified settings are enough to configure a protected connection (the VPN tunnel). If you need to specify additional settings, open the expert settings mode. To do this, use the switch in the bottom left corner of the page.

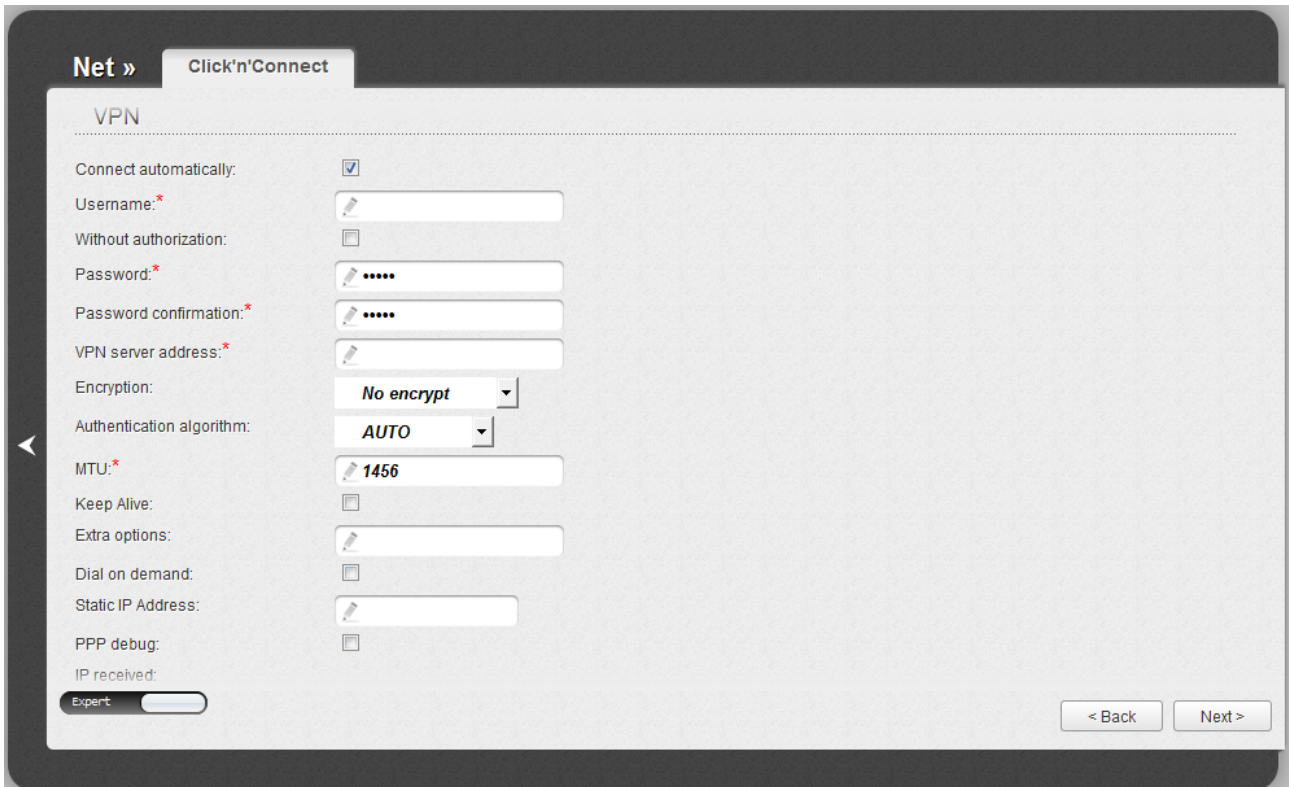

Figure 47. Configuring PPTP + Dynamic IP WAN connection. The expert settings mode. The **VPN** section.

| Parameter                    | Description  |
|------------------------------|--|
| <b>Connection name</b>       | A name for connection for easier identification.   |
| <b>VPN</b>                   |  |
| <b>Connect automatically</b> | Select the checkbox to enable auto-start of the connection upon the boot-up of the router.     |
| <b>Username</b>              | A username (login) to access the Internet.   |
| <b>Without authorization</b> | Select the checkbox if you don't need to enter a username and password to access the Internet. |
| <b>Password</b>              | A password to access the Internet.   |
| <b>Password confirmation</b> | The confirmation of the entered password (to avoid mistypes).                                  |
| <b>VPN server address</b>    | The IP or URL address of the PPTP or L2TP authentication server.                               |

| Parameter                       | Description  |
|---------------------------------|--|
| <b>Encryption</b>               | <p>Select a method of MPPE encryption.</p> <ul style="list-style-type: none"> <li>• <b>No encrypt:</b> MPPE encryption is not applied.</li> <li>• <b>MPPE 40/128 bit:</b> MPPE encryption with a 40-bit or 128-bit key is applied.</li> <li>• <b>MPPE 40 bit:</b> MPPE encryption with a 40-bit key is applied.</li> <li>• <b>MPPE 128 bit:</b> MPPE encryption with a 128-bit key is applied.</li> </ul> <p>MPPE encryption can be applied only if the <b>MS-CHAP</b>, <b>MS-CHAP-V2</b>, or <b>AUTO</b> value is selected from the <b>Authentication algorithm</b> drop-down list.</p> |
| <b>Authentication algorithm</b> | <p>Select a required authentication method from the drop-down list or leave the <b>AUTO</b> value.</p>   |
| <b>MTU</b>                      | <p>The maximum size of units transmitted by the interface.</p>   |
| <b>Keep Alive</b>               | <p>Select the checkbox if you want the router to keep you connected to your ISP even when the connection has been inactive for a specified period of time. When the checkbox is selected, the <b>LCP interval</b> and <b>LCP fails</b> fields are available. Specify the required values.</p>  |
| <b>Extra options</b>            | <p>Advanced options of the pppd daemon which need to be specified for this connection. <i>Optional.</i></p>  |
| <b>Dial on demand</b>           | <p>Select the checkbox if you want the router to establish connection to the Internet on demand. In the <b>Maximum idle time</b> field, specify a period of inactivity (in seconds) after which the connection should be terminated.</p>   |
| <b>Static IP Address</b>        | <p>Fill in the field if you want to use a static IP address to access the Internet.</p>  |
| <b>PPP debug</b>                | <p>Select the checkbox if you want to log all data on PPP connection debugging.</p>  |
| <b>IP received</b>              | <p>The IP address assigned by the ISP.</p>   |

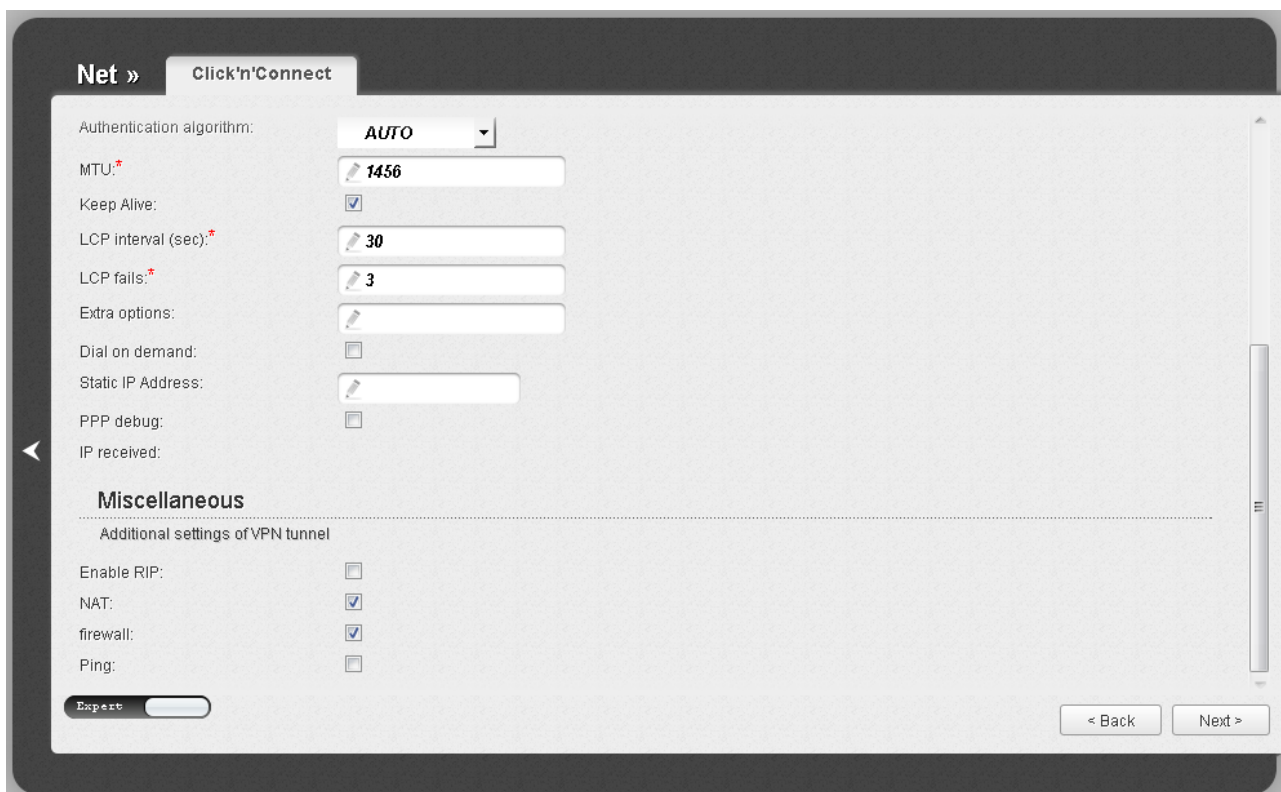

Figure 48. Configuring PPTP + Dynamic IP WAN connection. The expert settings mode. The **Miscellaneous** section.

| Parameter            | Description   |
|----------------------|---|
| <b>Miscellaneous</b> |   |
| <b>Enable RIP</b>    | Select the checkbox to allow using RIP for this connection.   |
| <b>NAT</b>           | Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.  |
| <b>Firewall</b>      | Select the checkbox to enable protection against ARP and DDoS attacks.  |
| <b>Ping</b>          | Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox. |

Click the **Next** button to continue.

After that the page displaying all specified settings opens. Click the **Apply** button to create the connection or the **Back** button to specify other settings.

After clicking the **Apply** button, the page for checking the Internet availability opens (see the **Checking Internet Availability** section, page 62).

## Checking Internet Availability

On the page, you can check the WAN connection you have created.

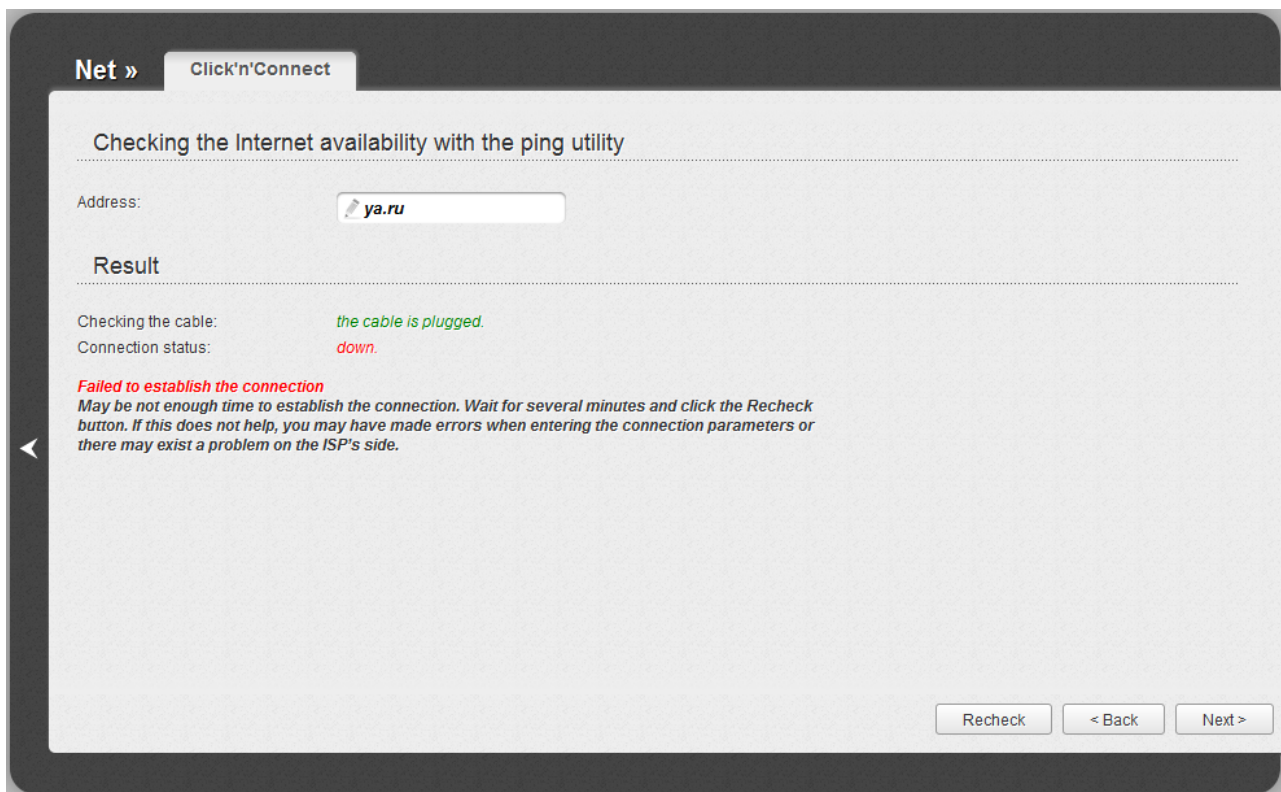

Figure 49. Checking the Internet availability.

In the **Result** section, the status of the WAN connection and possible causes of malfunctions are displayed. To recheck the status of the WAN connection, enter the IP address or name of a host in the **Address** field or leave the value specified by default (**ya.ru**). Then click the **Recheck** button.

Click the **Back** button to specify other settings.

Click the **Next** button to continue.

After clicking the **Next** button, the page for configuring wireless connection opens (see the *Configuring Wireless Connection* section, page 63).

## Configuring Wireless Connection

On the page, you can change the name of your wireless network, specify a password to it, or disable Wi-Fi connections.

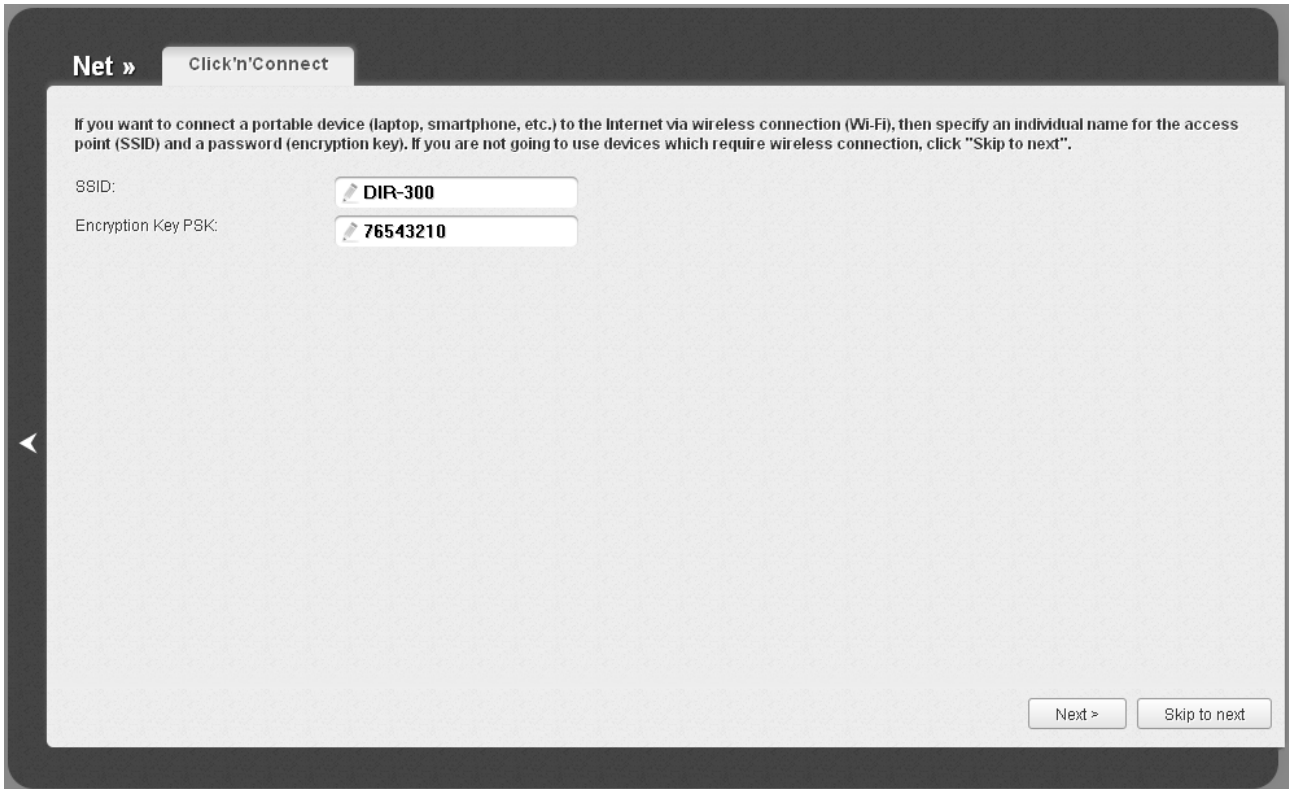

Figure 50. Configuring the wireless connection.

In the **SSID** field, specify a new name for the network (use digits and Latin characters).

In the **Encryption Key PSK** field, enter a key (a password that will be used to access your wireless network). Use digits and Latin characters.

Click the **Next** button to continue.

Click the **Skip to next** button to disable Wi-Fi connections.

On the opened page, click the **Back** button to specify other settings for your wireless network.

Click the **Save** button to save the specified settings.

After clicking the **Save** button, the quick settings page opens.

## Wireless Network Settings Wizard

To specify all needed settings for your wireless network, click the **Wireless network settings wizard** link in the **Wi-Fi** section.

Figure 51. Common and advanced settings of the wireless LAN.

On the opened page, in the **Common settings** section, select the **Enable Wireless** checkbox (if it was deselected before) to enable Wi-Fi connections.

In the **Advanced settings** section, you can split your network into several parts. To do this, select the relevant value (**2**, **3**, or **4**) from the **MBSSID** drop-down list.

Click the **Next** button to continue.

In the **Basic settings** section, you can change the basic parameters of your router's WLAN: “hide” your wireless network (**Hide Access Point**), specify a name for the network (**SSID**), select your location (**Country**) and the wireless channel number (**Channel**), specify the operating mode (**Wireless Mode**) and the maximum number of devices connected to the wireless network (**Max Associated Clients**).

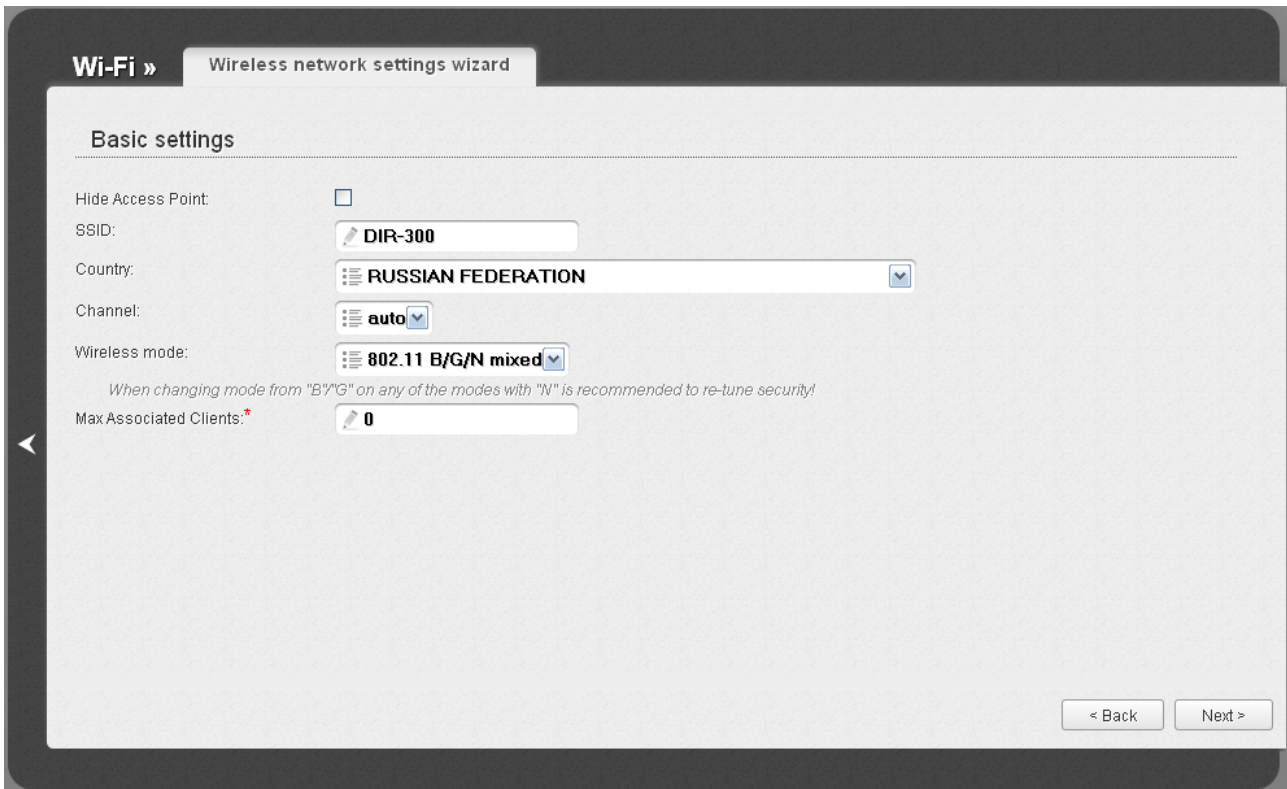

Figure 52. Basic settings of the wireless LAN.

Click the **Next** button to continue.

On the next page, you can modify security settings of the WLAN. By default, the **Open** network authentication type with no encryption is specified for the WLAN.

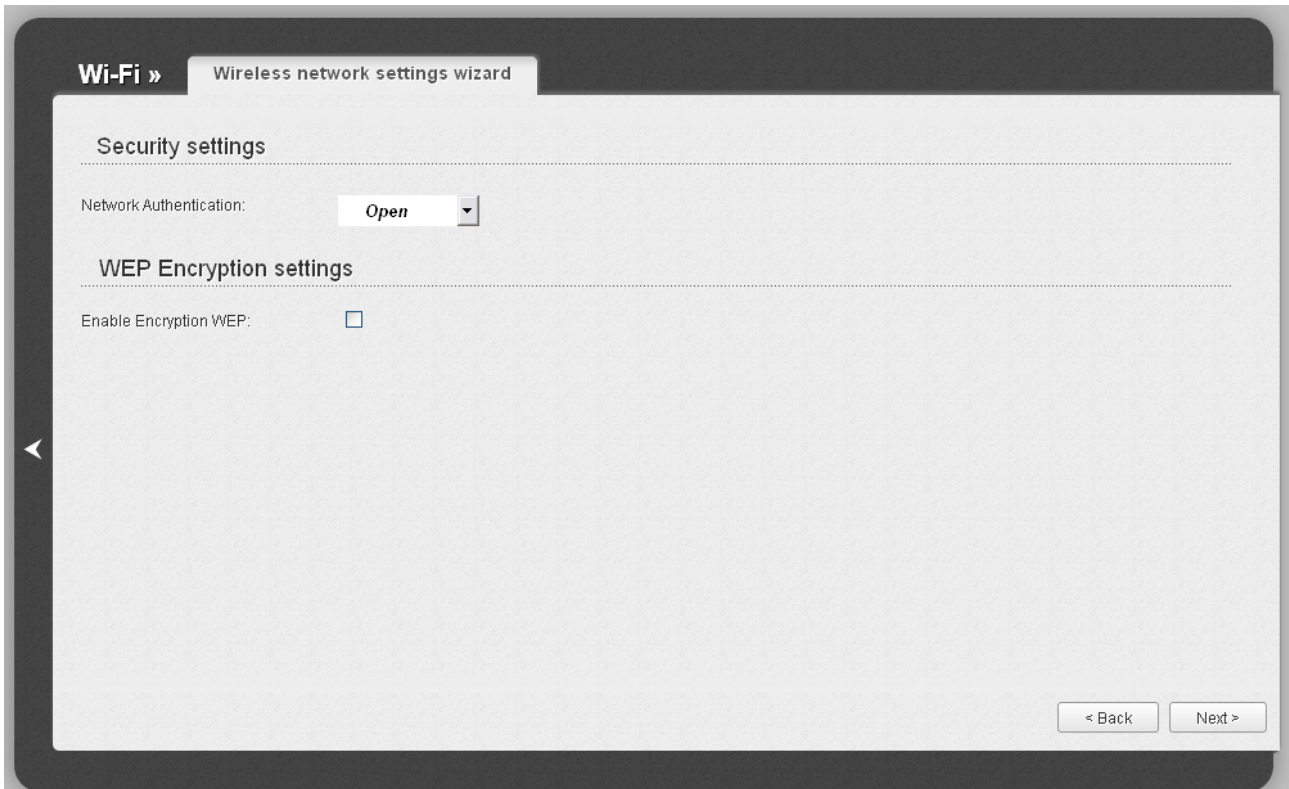

Figure 53. The default security settings.

The default security settings do not provide sufficient protection for the WLAN. Please, specify your own security settings for the WLAN (or each part of the WLAN if the network was splitted into parts).

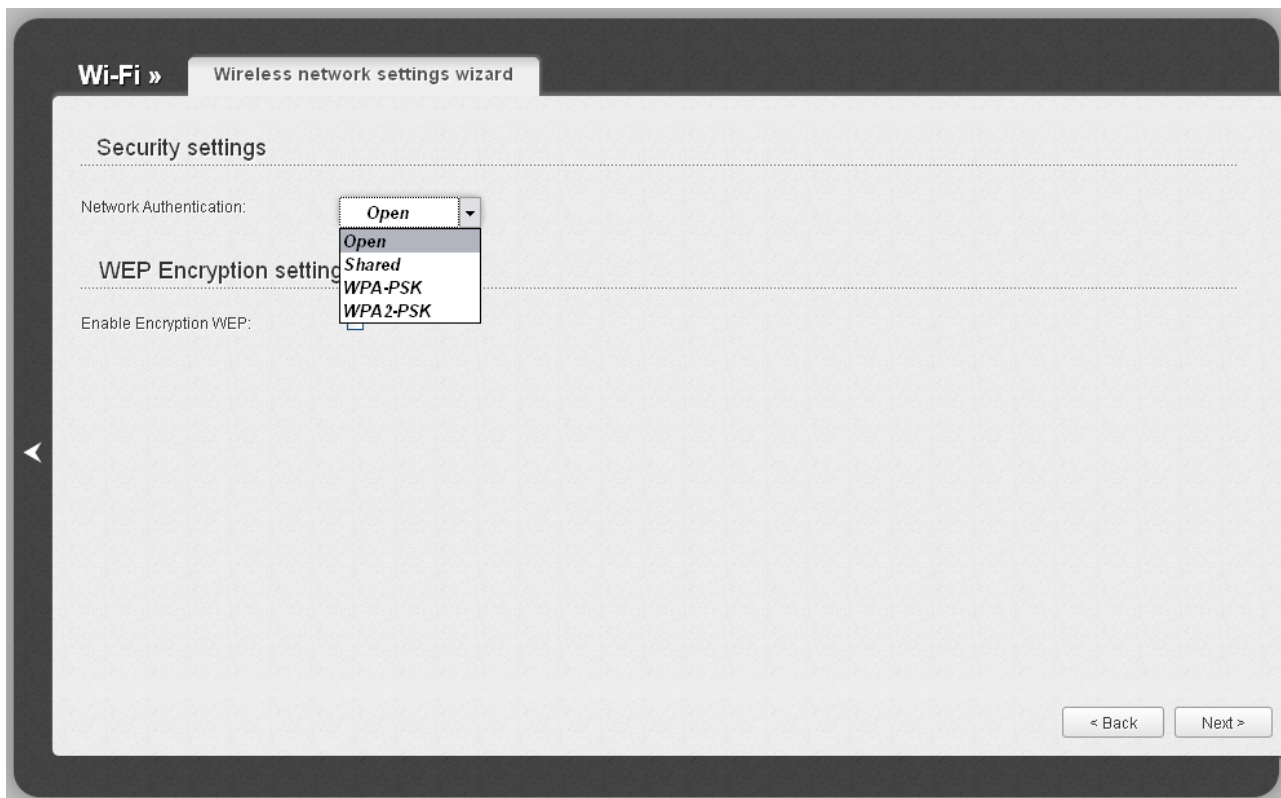

Figure 54. Network authentication types supported by the router.

The router supports the following authentication types:

| Authentication type | Description  |
|---------------------|--|
| <b>Open</b>         | Open authentication (with WEP encryption for wireless network modes not supporting 802.11n devices).   |
| <b>Shared</b>       | Shared key authentication with WEP encryption. This authentication type is not available when on the basic settings page, in the <b>Wireless mode</b> drop-down list, a mode supporting 802.11n devices is selected. |
| <b>WPA-PSK</b>      | WPA-based authentication using a PSK.  |
| <b>WPA2-PSK</b>     | WPA2-based authentication using a PSK.   |

When the **Open** or **Shared** value is selected, the **WEP Encryption settings** section is displayed (the section is unavailable for the wireless network operating modes which support the standard 802.11n):

Figure 55. The **Open** value is selected from the **Network Authentication** drop-down list.

| Parameter                        | Description  |
|----------------------------------|--|
| <b>Enable Encryption WEP</b>     | The checkbox activating WEP encryption. When the checkbox is selected, the <b>Default Key ID</b> field, the <b>Encryption Key WEP as HEX</b> checkbox, and four <b>Encryption Key WEP</b> fields are displayed on the page. For the <b>Shared</b> authentication type the checkbox is always selected.   |
| <b>Default Key ID</b>            | The number of the key (from first to fourth) which will be used for WEP encryption.  |
| <b>Encryption Key WEP as HEX</b> | Select the checkbox to set a hexadecimal number as a key for encryption.   |
| <b>Encryption Key WEP (1-4)</b>  | Keys for WEP encryption. The router uses the key selected from the <b>Default Key ID</b> drop-down list. It is required to specify all the fields.<br>You can specify keys containing 5 or 13 symbols (use digits and/or Latin characters). If the <b>Encryption Key WEP as HEX</b> checkbox is selected, you can specify only keys containing 10 symbols (the digits 0-9 and the characters A-F). |

When the **WPA-PSK** or **WPA2-PSK** value is selected, the **WPA Encryption settings** section is displayed:

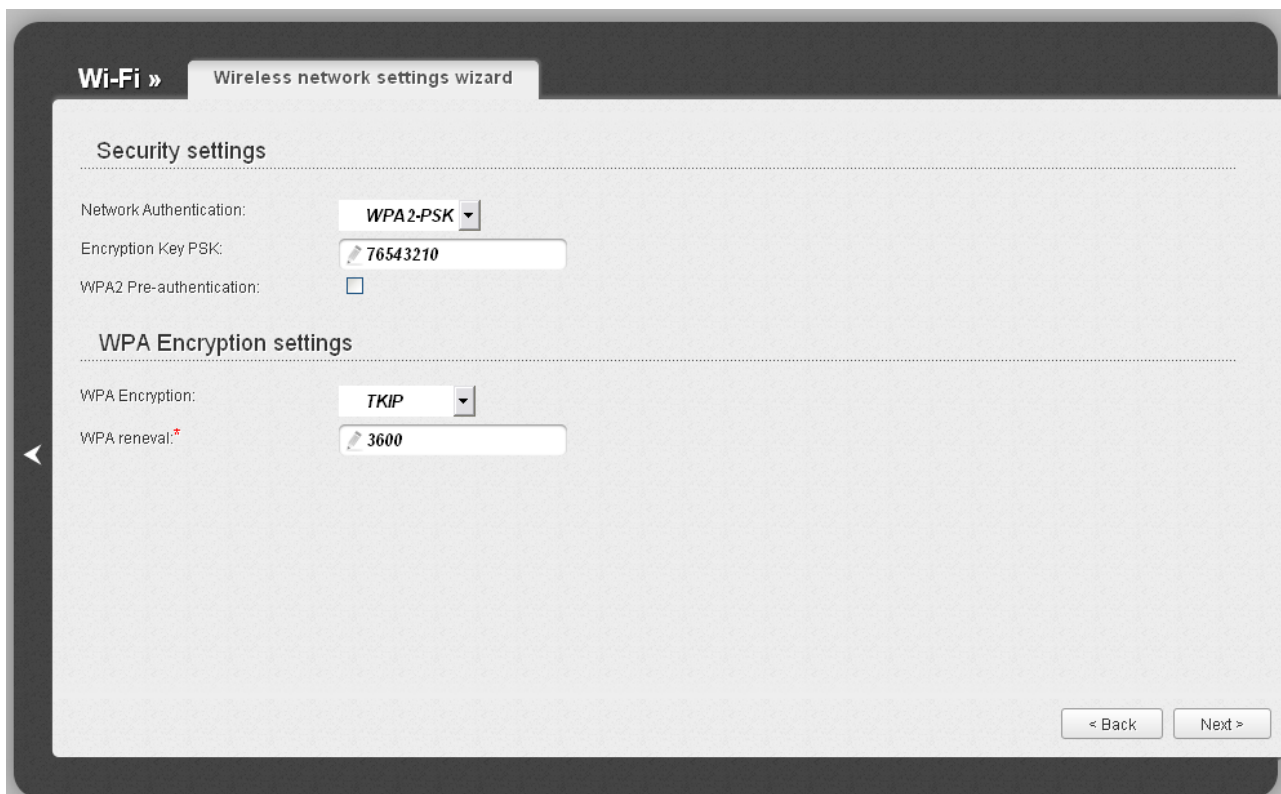

Figure 56. The **WPA2-PSK** value is selected from the **Network Authentication** drop-down list.

| Parameter                      | Description   |
|--------------------------------|---|
| <b>Encryption Key PSK</b>      | A key for WPA encryption. The key can contain digits and/or Latin characters.   |
| <b>WPA2 Pre-authentication</b> | The checkbox activating preliminary authentication (displayed only for the <b>WPA2-PSK</b> authentication type).  |
| <b>WPA Encryption</b>          | An encryption method: <b>TKIP</b> , <b>AES</b> , or <b>TKIP+AES</b> .   |
| <b>WPA renewal</b>             | The time period (in seconds), at the end of which a new key for WPA encryption is generated. When the value <b>0</b> is specified for this field, the key is not renewed. |

Click the **Next** button to continue.

When all the steps of configuring the WLAN are completed, the specified settings are displayed on the page. Check their correctness and then click the **Save** button. After that you get to the quick settings page.

## Virtual Server Settings Wizard

To create a virtual server for redirecting incoming Internet traffic to a specified IP address in the LAN, click the **Virtual server settings wizard** link in the **Firewall** section.

Figure 57. The page for adding a virtual server.

On the opened page, you can specify the following parameters:

| Parameter         | Description  |
|-------------------|--|
| <b>Template</b>   | Select a virtual server template from the drop-down list, or select <b>Custom</b> to specify all parameters of the new virtual server manually.  |
| <b>Name</b>       | Enter a name for the virtual server for easier identification. You can specify any name.   |
| <b>Interface</b>  | Select a WAN connection to which this virtual server will be assigned.   |
| <b>Private IP</b> | Enter the IP address of the server from the local area network. To choose a device connected to the router's LAN at the moment, select the relevant value from the drop-down list (the field will be filled in automatically). |
| <b>Remote IP</b>  | Enter the IP address of the server from the external network.  |

When needed settings are configured, click the **Save** button. After that you get to the quick settings page.

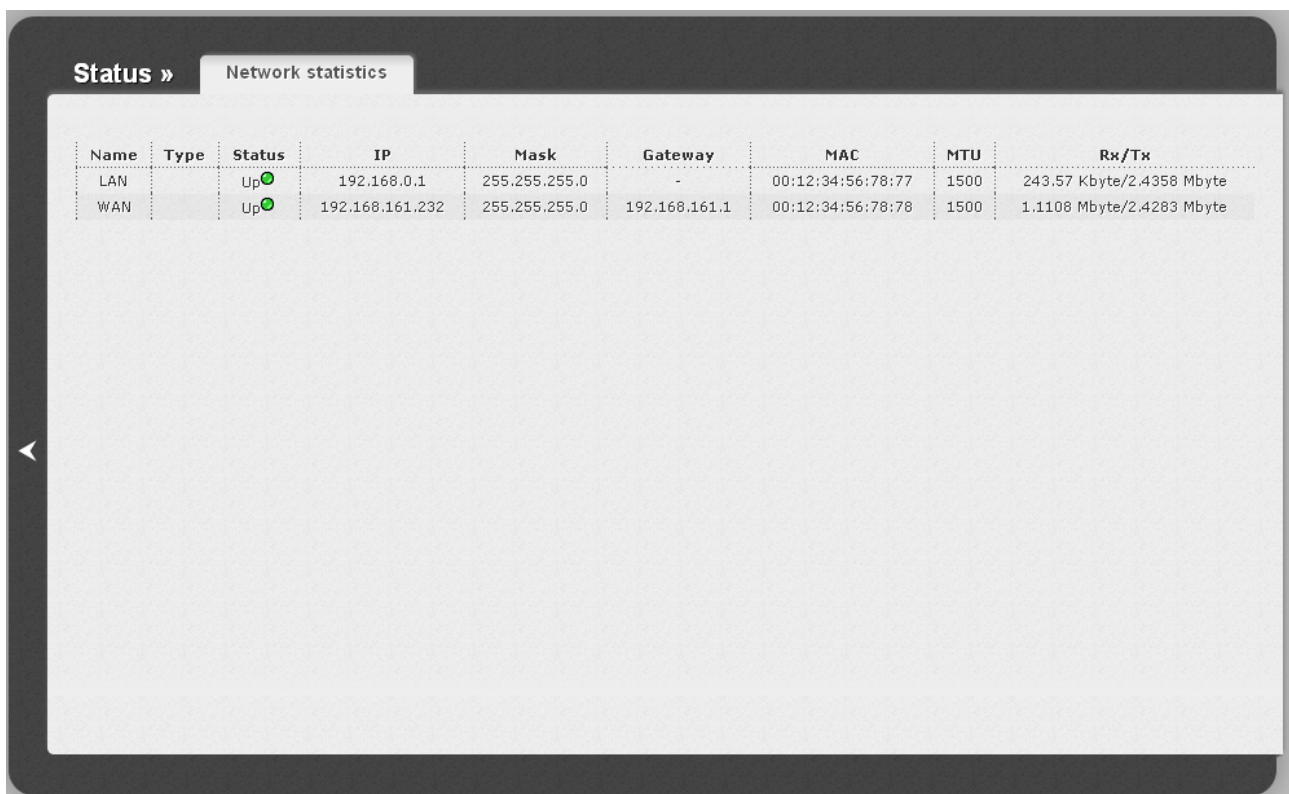

## Status

The pages of this section display data on the current state of the router:

- network statistics
- IP addresses leased by the DHCP server
- the routing table
- data on devices connected to the router's network and its web-based interface.

### Network Statistics

On the **Status / Network statistics** page, you can view statistics for all interfaces (connections) existing in the system. For each connection the following data are displayed: name and state (when the connection is on, its name is highlighted in green, when the connection is off, its name is highlighted in red), IP address and subnet mask, gateway (if the connection is established), MAC address, MTU value, and volume of data received and transmitted (with increase of the volume the units of measurement are changed automatically: byte, Kbyte, Mbyte, Gbyte).

| Name | Type | Status | IP              | Mask          | Gateway       | MAC               | MTU  | Rx/Tx                     |
|------|------|--------|-----------------|---------------|---------------|-------------------|------|---------------------------|
| LAN  |      | Up     | 192.168.0.1     | 255.255.255.0 | -             | 00:12:34:56:78:77 | 1500 | 243.57 Kbyte/2.4358 Mbyte |
| WAN  |      | Up     | 192.168.161.232 | 255.255.255.0 | 192.168.161.1 | 00:12:34:56:78:78 | 1500 | 1.1108 Mbyte/2.4283 Mbyte |

Figure 58. The **Status / Network statistics** page.

## DHCP

The **Status / DHCP** page displays the information on computers that have been identified by hostnames and MAC addresses and have got IP addresses from the DHCP server of the device, as well as the IP address expiration periods (the lease time).

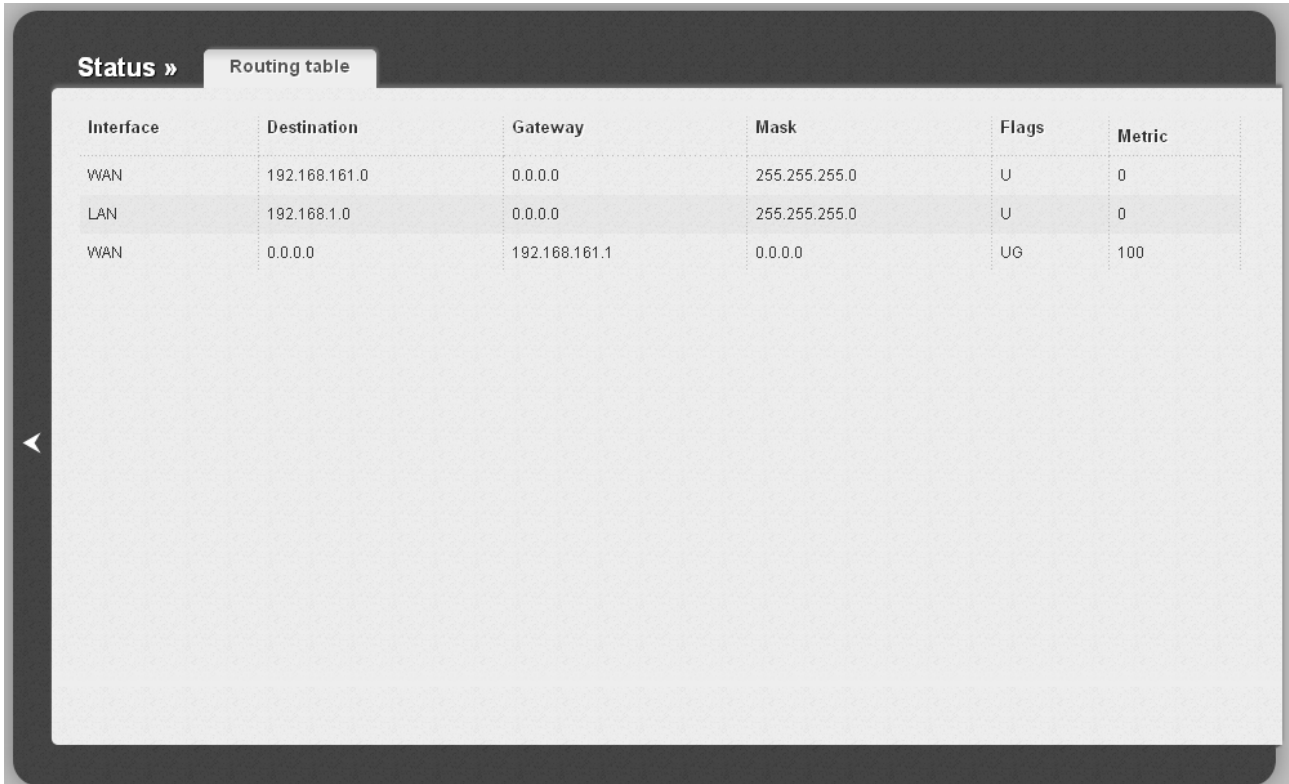

| Hostname         | IP address    | MAC address       | Expires     |
|------------------|---------------|-------------------|-------------|
| microsoft-bcacbb | 192.168.0.100 | 08:00:27:2d:0e:a4 | 1day, 18sec |

Figure 59. The **Status / DHCP** page.

## Routing Table

The **Status / Routing table** page displays the information on routes. The table contains destination IP addresses, gateways, subnet masks, and other data.

| Interface | Destination   | Gateway       | Mask          | Flags | Metric |
|-----------|---------------|---------------|---------------|-------|--------|
| WAN       | 192.168.161.0 | 0.0.0.0       | 255.255.255.0 | U     | 0      |
| LAN       | 192.168.1.0   | 0.0.0.0       | 255.255.255.0 | U     | 0      |
| WAN       | 0.0.0.0       | 192.168.161.1 | 0.0.0.0       | UG    | 100    |

Figure 60. The **Status / Routing table** page.

## LAN Clients

On the **Status / LAN clients** page, you can view the list of devices connected to the router and devices accessing its web-based interface.

The screenshot shows the 'Status / LAN clients' page in a web interface. At the top left, there is a 'Status »' breadcrumb and a 'LAN clients' tab. Below this is a table with four columns: 'IP address', 'Flags', 'MAC address', and 'Interface'. The table contains three rows of data. A left-pointing arrow is visible on the left side of the table area.

| IP address    | Flags | MAC address       | Interface |
|---------------|-------|-------------------|-----------|
| 192.168.1.77  | 0x2   | 00:30:48:fe:db:ec | LAN       |
| 192.168.1.40  | 0x2   | 1c:6f:65:b0:82:ba | LAN       |
| 192.168.161.1 | 0x2   | 1c:6f:65:b0:82:ba | WAN       |

Figure 61. The **Status / LAN clients** page.

For each device the following data are displayed: the IP address, the MAC address, and the interface to which the device is connected.

## Net

In this menu you can configure basic parameters of the router's local area network and configure connection to the Internet (a WAN connection).

## WAN

On the **Net / WAN** page, you can create and edit connections used by the router.

By default, the **WAN** connection is configured in the system. It is assigned to the INTERNET port of the router. You can edit this connection or delete it.

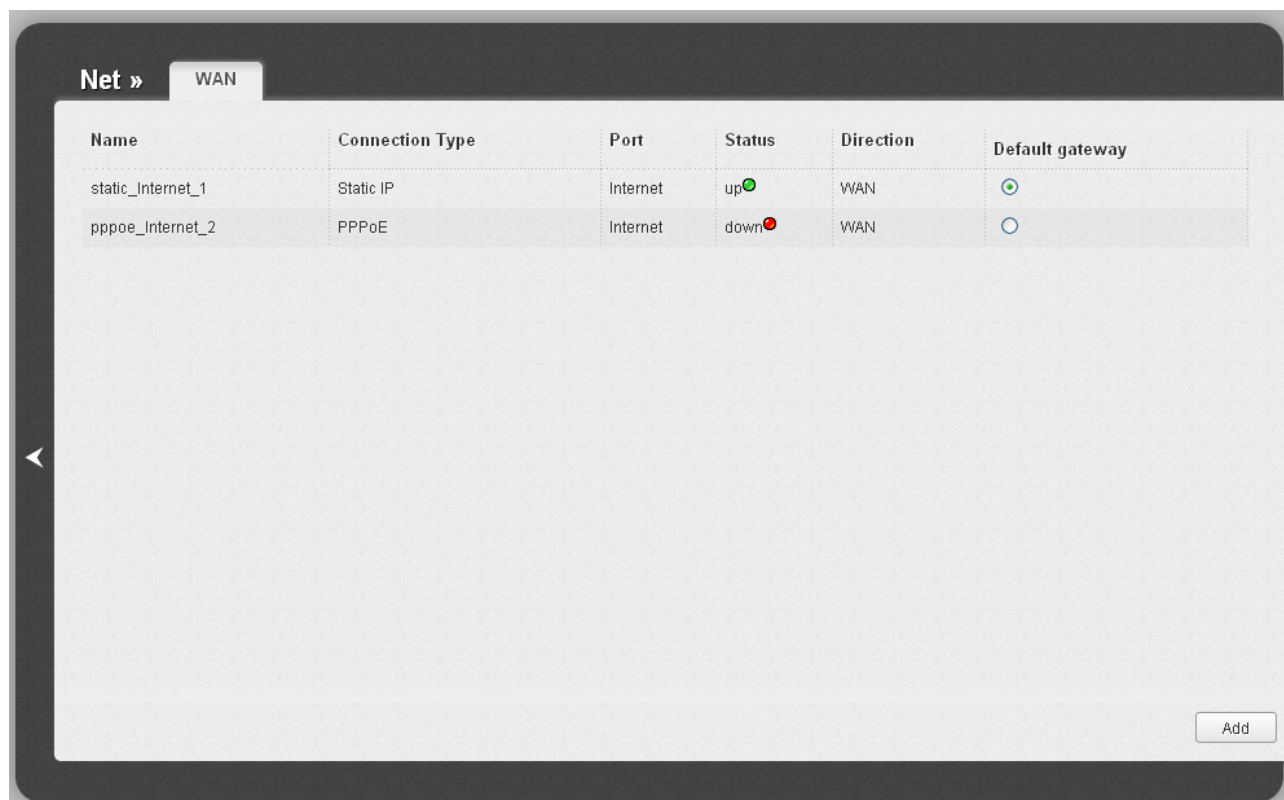

Figure 62. The **Net / WAN** page.

To create a new connection, click the **Add** button. On the page displayed, specify the relevant values.

To edit an existing connection, left-click the relevant line in the table. On the page displayed, change the parameters and click the **Save** button.

To delete an existing connection, left-click the relevant line in the table. On the page displayed, click the **Delete** button.

To use one of existing WAN connections as a default gateway, select the choice of the **Default gateway** radio button located in the line corresponding to this connection.

## Creating PPPoE WAN Connection

To create a connection of the PPPoE type, click the **Add** button on the **Net / WAN** page. On the opened page, select the **PPPoE** value from the **Connection Type** drop-down list and specify the needed values.

Figure 63. The page for creating a new connection. The **General settings** and **Ethernet** sections.

| Parameter               | Description  |
|-------------------------|--|
| <b>General settings</b> |  |
| <b>Port</b>             | A physical interface to which the new connection will be assigned. |
| <b>Name</b>             | A name for connection for easier identification.                   |
| <b>Enable</b>           | Select the checkbox to enable the connection.                      |
| <b>Direction</b>        | The direction of this connection.                                  |
| <b>Ethernet</b>         |  |
| <b>MTU</b>              | The maximum size of units transmitted by the interface.            |

| Parameter                                     | Description   |
|---|---|
| <p style="text-align: center;"><b>MAC</b></p> | <p>A MAC address assigned to the interface. This parameter is mandatory if your ISP uses MAC address binding. In the field, enter the MAC address registered by your ISP upon concluding the agreement.</p> <p>You can click the <b>Clone MAC Address</b> button () to set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface.</p> <p>Also you can set the address of a device connected to the router's LAN at the moment. To do this, select the relevant value from the drop-down list (the field will be filled in automatically).</p> |

|---------------------------------|--|
| <b>PPP</b>                      |  |
| <b>Username</b>                 | A username (login) to access the Internet.   |
| <b>Without authorization</b>    | Select the checkbox if you don't need to enter a username and password to access the Internet.   |
| <b>Password</b>                 | A password to access the Internet.   |
| <b>Password confirmation</b>    | The confirmation of the entered password (to avoid mistypes).  |
| <b>Service name</b>             | The name of the PPPoE authentication server.   |
| <b>Authentication algorithm</b> | Select a required authentication method from the drop-down list or leave the <b>AUTO</b> value.  |
| <b>MTU</b>                      | The maximum size of units transmitted by the interface.  |
| <b>Keep Alive</b>               | Select the checkbox if you want the router to keep you connected to your ISP even when the connection has been inactive for a specified period of time. When the checkbox is selected, the <b>LCP interval</b> and <b>LCP fails</b> fields are available. Specify the required values. |
| <b>Dial on demand</b>           | Select the checkbox if you want the router to establish connection to the Internet on demand. In the <b>Maximum idle time</b> field, specify a period of inactivity (in seconds) after which the connection should be terminated.  |
| <b>PPP IP extension</b>         | This option is used by some ISPs. Contact your ISP to clarify if this checkbox needs to be enabled.  |
| <b>Static IP Address</b>        | Fill in the field if you want to use a static IP address to access the Internet.   |
| <b>PPP debug</b>                | Select the checkbox if you want to log all data on PPP connection debugging.   |
| <b>PPPoE pass through</b>       | Select the checkbox if you want to allow PPPoE clients of computers from your LAN to connect to the Internet through this PPPoE connection of the router.  |

Figure 65. The page for creating a new connection. The **Miscellaneous** section.

| Parameter                    | Description   |
|------------------------------|---|
| <b>Miscellaneous</b>         |   |
| <b>Enable RIP</b>            | Select the checkbox to allow using RIP for this connection.   |
| <b>Enable IGMP Multicast</b> | Select the checkbox to allow multicast traffic from the external network (e.g. video streaming) to be received.   |
| <b>NAT</b>                   | Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.  |
| <b>Firewall</b>              | Select the checkbox to enable protection against ARP and DDoS attacks.  |
| <b>Ping</b>                  | Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox. |

When all needed settings are configured, click the **Save** button.

## Creating Static IP WAN Connection

To create a connection of the Static IP type, click the **Add** button on the **Net / WAN** page. On the opened page, select the **Static IP** value from the **Connection Type** drop-down list and specify the needed values.

The screenshot shows a configuration page with two main sections: **General settings** and **Ethernet**. In the **General settings** section, there are five rows of configuration: 'Connection Type' is a dropdown menu set to 'Static IP'; 'Port' is a dropdown menu set to 'Internet'; 'Name' is a text input field containing 'static\_Internet\_3'; 'Enable' is a checked checkbox; and 'Direction' is a text field containing 'WAN'. The **Ethernet** section has three rows: 'MTU' is a text input field containing '1500'; 'MAC' is a text input field containing '00:E0:4C:81:86:88' next to a dropdown menu set to '<Select address>'; and a 'Clone MAC' button is located below the MAC field.

Figure 66. The page for creating a new connection. The **General settings** and **Ethernet** sections.

| Parameter               | Description  |
|-------------------------|--|
| <b>General settings</b> |  |
| <b>Port</b>             | A physical interface to which the new connection will be assigned. |
| <b>Name</b>             | A name for connection for easier identification.                   |
| <b>Enable</b>           | Select the checkbox to enable the connection.                      |
| <b>Direction</b>        | The direction of this connection.                                  |
| <b>Ethernet</b>         |  |
| <b>MTU</b>              | The maximum size of units transmitted by the interface.            |

| Parameter                                     | Description   |
|---|---|
| <p style="text-align: center;"><b>MAC</b></p> | <p>A MAC address assigned to the interface. This parameter is mandatory if your ISP uses MAC address binding. In the field, enter the MAC address registered by your ISP upon concluding the agreement.</p> <p>You can click the <b>Clone MAC Address</b> button () to set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface.</p> <p>Also you can set the address of a device connected to the router's LAN at the moment. To do this, select the relevant value from the drop-down list (the field will be filled in automatically).</p> |

| <b>Primary DNS server/<br/>Secondary DNS server</b> | Enter addresses of the primary and secondary DNS servers in the relevant fields.  |
| <b>Miscellaneous</b>                                |   |
| <b>Enable RIP</b>                                   | Select the checkbox to allow using RIP for this connection.   |
| <b>Enable IGMP Multicast</b>                        | Select the checkbox to allow multicast traffic from the external network (e.g. video streaming) to be received.   |
| <b>NAT</b>  | Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.  |
| <b>Firewall</b>                                     | Select the checkbox to enable protection against ARP and DDoS attacks.  |
| <b>Ping</b>   | Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox. |

When all needed settings are configured, click the **Save** button.

## Creating Dynamic IP WAN Connection

To create a connection of the Dynamic IP type, click the **Add** button on the **Net / WAN** page. On the opened page, select the **Dynamic IP** value from the **Connection Type** drop-down list and specify the needed values.

The screenshot shows a configuration page with two main sections: **General settings** and **Ethernet**.  
**General settings** includes:  
 - Connection Type: Dynamic IP (dropdown)  
 - Port: Internet (dropdown)  
 - Name: dynamic\_Internet\_3 (text input with edit icon)  
 - Enable:   
 - Direction: WAN  
**Ethernet** section includes:  
 - MTU: 1500 (text input with edit icon)  
 - MAC: 00:E0:4C:81:86:88 (text input with edit icon) and a dropdown menu showing '<Select address>'.  
 - A 'Clone MAC' button is located below the MAC field.

Figure 68. The page for creating a new connection. The **General settings** and **Ethernet** sections.

| Parameter               | Description  |
|-------------------------|--|
| <b>General settings</b> |  |
| <b>Port</b>             | A physical interface to which the new connection will be assigned. |
| <b>Name</b>             | A name for connection for easier identification.                   |
| <b>Enable</b>           | Select the checkbox to enable the connection.                      |
| <b>Direction</b>        | The direction of this connection.                                  |
| <b>Ethernet</b>         |  |
| <b>MTU</b>              | The maximum size of units transmitted by the interface.            |

| Parameter  | Description   |
|------------|---|
| <b>MAC</b> | <p>A MAC address assigned to the interface. This parameter is mandatory if your ISP uses MAC address binding. In the field, enter the MAC address registered by your ISP upon concluding the agreement.</p> <p>You can click the <b>Clone MAC Address</b> button () to set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface.</p> <p>Also you can set the address of a device connected to the router's LAN at the moment. To do this, select the relevant value from the drop-down list (the field will be filled in automatically).</p> |

**Miscellaneous**

---

Enable RIP:

NAT:

firewall:

Ping:

Figure 77. The page for creating a new connection. The **Miscellaneous** section.

| Parameter            | Description   |
|----------------------|---|
| <b>Miscellaneous</b> |   |
| <b>Enable RIP</b>    | Select the checkbox to allow using RIP for this connection.   |
| <b>NAT</b>           | Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.  |
| <b>Firewall</b>      | Select the checkbox to enable protection against ARP and DDoS attacks.  |
| <b>Ping</b>          | Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox. |

When all needed settings are configured, click the **Save** button.

## LAN

To configure the router's local interface, proceed to the **Net / LAN** page.

The screenshot shows the LAN configuration interface. It features two input fields: 'IP Address:\*' with a default value of '192.168.0.1' and 'Netmask:\*' with a default value of '255.255.255.0'. Each field has a small edit icon to its left.

Figure 78. Basic settings of the local interface.

If needed, edit the basic settings of the local interface.

| Parameter         | Description  |
|-------------------|--|
| <b>IP Address</b> | The IP address of the router in the local subnet. By default, the following value is specified: <b>192.168.0.1</b> . |
| <b>Netmask</b>    | The mask of the local subnet. By default, the following value is specified: <b>255.255.255.0</b> .                   |

When needed settings are configured, click the **Save** button.

In the **DHCP server** section, you can configure the built-in DHCP sever of the router.

The screenshot shows the DHCP server configuration section. It includes a 'DHCP server' header and four configuration fields: 'Mode' set to 'Enable', 'Start IP:\*' set to '192.168.0.2', 'End IP:\*' set to '192.168.0.100', and 'Lease time (min):\*' set to '86400'. Each field has an edit icon.

Figure 79. The section for configuring the DHCP server.

| Parameter   | Description  |
|-------------|--|
| <b>Mode</b> | <p>An operating mode of the router's DHCP server.</p> <p><b>Enable:</b> the router assigns IP addresses to clients automatically in accordance with the specified parameters. When this value is selected, the <b>Start IP</b>, <b>End IP</b>, and the <b>Lease time</b> fields are displayed on the page.</p> <p><b>Disable:</b> the router's DHCP server is disabled, clients' IP addresses are assigned manually.</p> <p><b>Relay:</b> an external DHCP server is used to assign IP addresses to clients. When this value is selected, the <b>External DHCP server IP</b> field is displayed on the page.</p> |

| Parameter                      | Description   |
|--------------------------------|---|
| <b>Start IP</b>                | The start IP address of the address pool used by the DHCP server to distribute IP addresses to clients.   |
| <b>End IP</b>                  | The end IP address of the address pool used by the DHCP server to distribute IP addresses to clients.   |
| <b>Lease time</b>              | The lifetime of IP addresses leased by the DHCP server. At the end of this period the leased IP address is revoked and can be distributed to another device, unless the previous device has confirmed the need to keep the address. |
| <b>External DHCP server IP</b> | The IP address of the external DHCP server which assigns IP addresses to the router's clients.  |

When all needed settings are configured, click the **Save** button.

In the **Static DHCP** section, you can specify MAC address and IP address pairs (set a fixed IP address in the local area network for a device with a certain MAC address). The router assigns IP addresses in accordance with the specified pairs only when the DHCP server is enabled (in the **DHCP server** section, in the **Mode** drop-down list, the **Enable** value is selected).

Figure 80. The section for creating MAC-IP pairs.

To create a MAC-IP pair, click the **Add** button. In the **IP** field, enter an IP address which will be assigned to the device from the LAN, then in the **MAC** field, enter the MAC address of this device. In the **Host** field, specify a network name of the device for easier identification (*optional*).

Also you can create a MAC-IP pair for a device connected to the router's LAN at the moment. To do this, select the relevant value from the **Known IP/MAC** addresses drop-down list (the **IP** and **MAC** fields will be filled in automatically).

When all needed MAC-IP pairs are specified, click the **Save** button.

Existing MAC-IP pairs are displayed in the table of the **Static DHCP** section. To remove a pair, select the checkbox in the relevant line in the table and click the **Remove** button. Then click the **Save** button.

## Wi-Fi

In this menu you can specify all needed settings for your wireless network.

### Common settings

On the **Wi-Fi / Common settings** page, you can enable your wireless local area network (WLAN) and split it into parts.

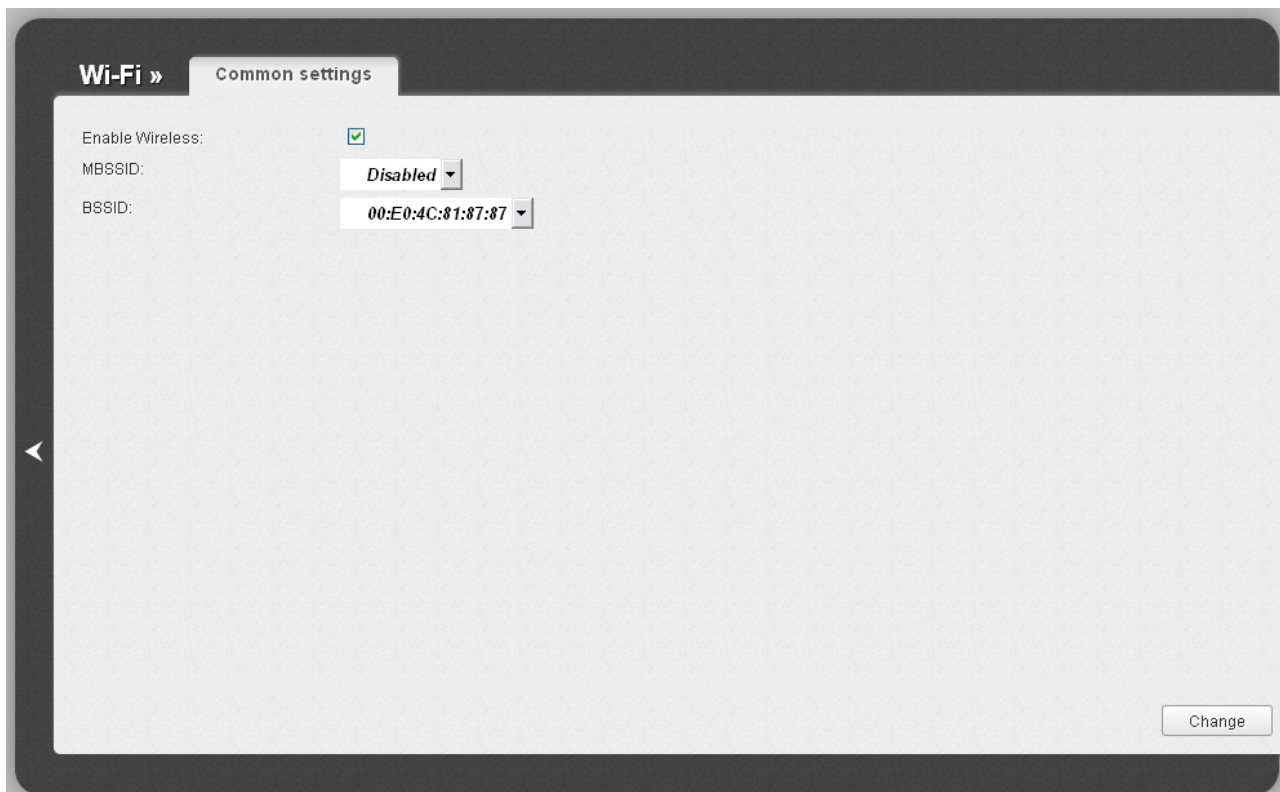

Figure 81. Common settings of the wireless LAN.

The **Enable Wireless** checkbox enables Wi-Fi connections. By default, the checkbox is selected. If you want to disable your WLAN, deselect the **Enable Wireless** checkbox.

The router allows splitting your WLAN into several parts (up to four) with their own names (SSIDs) and unique identifiers (BSSIDs). To split the network into several parts, select a relevant value (**2**, **3**, or **4**) from the **MBSSID** drop-down list. By default, the wireless network is not splitted (the **Disabled** value is selected from the list).

The value from the **BSSID** drop-down list is the unique identifier for your Wi-Fi network. You cannot change the value of this parameter, it is determined in the device's internal settings.

If you have splitted your WLAN into parts, the **BSSID** drop-down list contains several values. Each identifier corresponds to a single part of the WLAN.

For every part of the WLAN you can specify a name (SSID), security settings, rules for MAC filtering, and enable the WMM function (if needed). To specify these values, select the needed part from the **BSSID** drop-down list and click the **Change** button. Then proceed to the relevant page of the **Wi-Fi** menu section.

## Basic Settings

On the **Wi-Fi / Basic settings** page, you can configure basic parameters of the device's WLAN.

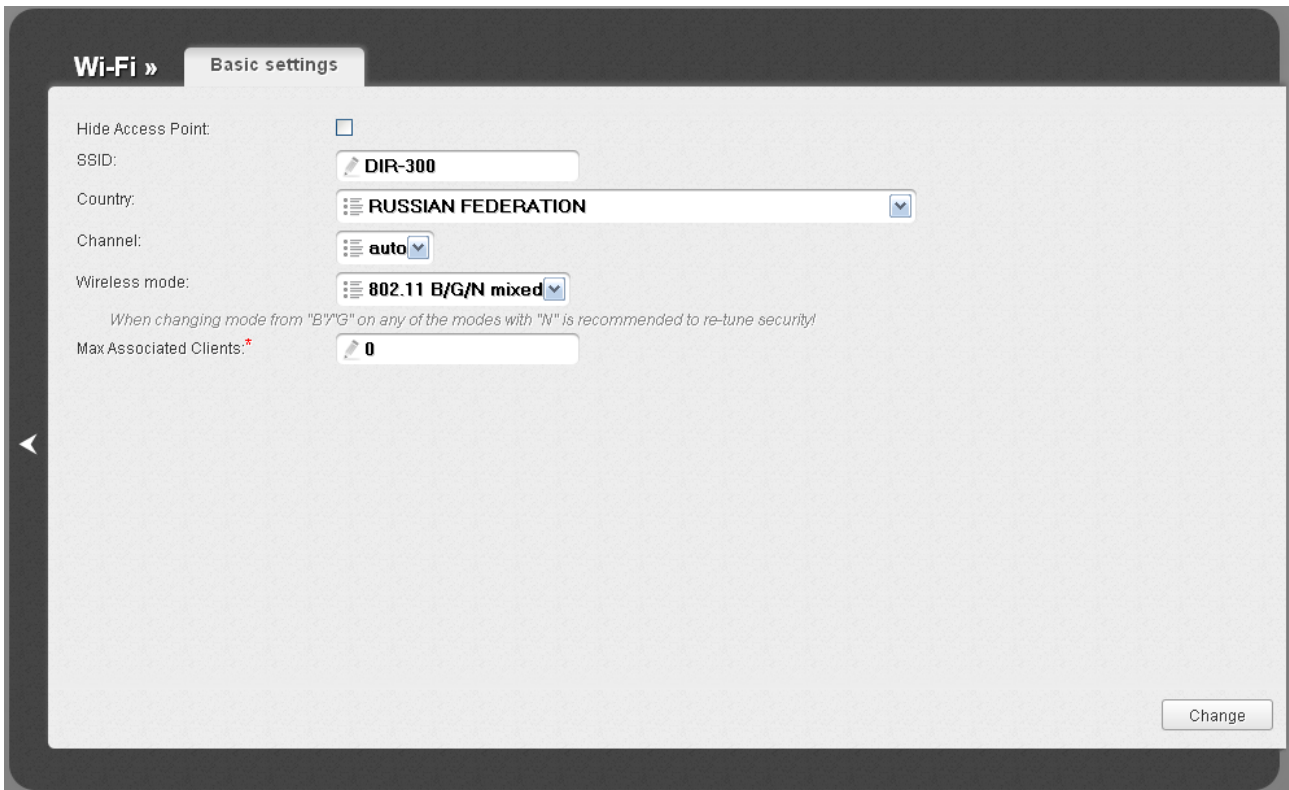

Figure 82. Basic settings of the wireless LAN.

| Parameter                     | Description  |
|-------------------------------|--|
| <b>Hide Access Point</b>      | If the checkbox is selected, other users cannot see your Wi-Fi network. (It is recommended not to select this checkbox in order to simplify initial configuration of your WLAN.)   |
| <b>SSID</b>                   | A name for the WLAN. By default, the value <b>DIR-300</b> is specified. If your network is splitted into parts, each part has the default name ( <b>DIR-300.2</b> , <b>DIR-300.3</b> , and <b>DIR-300.4</b> ). It is recommended to specify another name for the network upon initial configuration (use digits and Latin characters). |
| <b>Country</b>                | The country you are in. Select a value from the drop-down list.  |
| <b>Channel</b>                | The wireless channel number. When the <b>auto</b> value is selected, the router itself chooses the channel with the least interference.  |
| <b>Wireless mode</b>          | Operating mode of the wireless network of the router. This parameter defines standards of the devices that will be able to use your wireless network. Select a value from the drop-down list.  |
| <b>Max Associated Clients</b> | The maximum number of devices connected to the wireless network of the router. When the value <b>0</b> is specified, the device does not limit the number of connected clients.  |

When you have configured the parameters, click the **Change** button.

## Security Settings

On the **Wi-Fi / Security settings** page, you can modify security settings of the WLAN.

Figure 83. The default security settings.

By default, the **Open** network authentication type with no encryption is specified for the WLAN.

The default security settings do not provide sufficient protection for the WLAN. Please, specify your own security settings for the WLAN (or each part of the WLAN if the network was splitted into parts).

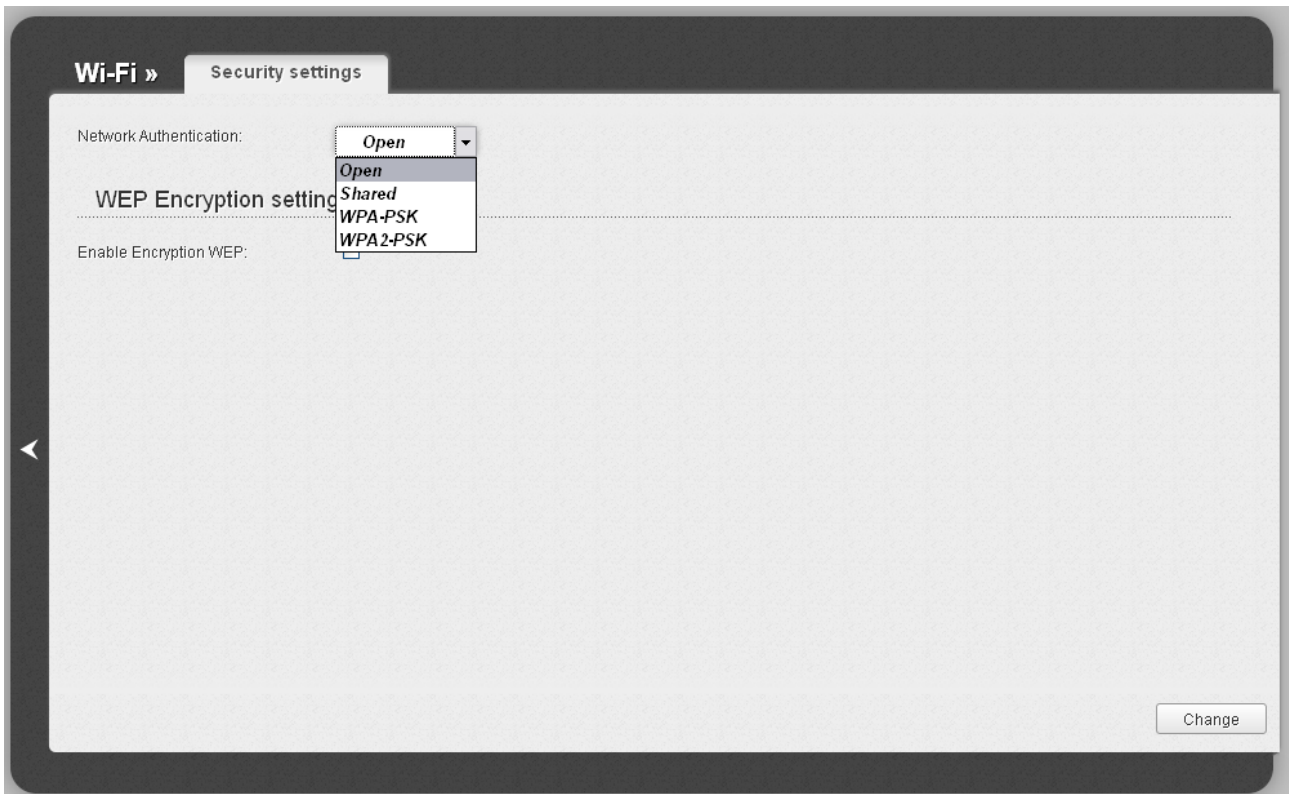

Figure 84. Network authentication types supported by the router.

The router supports the following authentication types:

| Authentication type | Description   |
|---------------------|---|
| <b>Open</b>         | Open authentication (with WEP encryption for wireless network modes not supporting 802.11n devices).  |
| <b>Shared</b>       | Shared key authentication with WEP encryption. This authentication type is not available when on the <b>Wi-Fi / Basic settings</b> page, in the <b>Wireless mode</b> drop-down list, a mode supporting 802.11n devices is selected. |
| <b>WPA-PSK</b>      | WPA-based authentication using a PSK.   |
| <b>WPA2-PSK</b>     | WPA2-based authentication using a PSK.  |

When the **Open** or **Shared** value is selected, the **WEP Encryption settings** section is displayed (the section is unavailable for the wireless network operating modes which support the standard 802.11n):

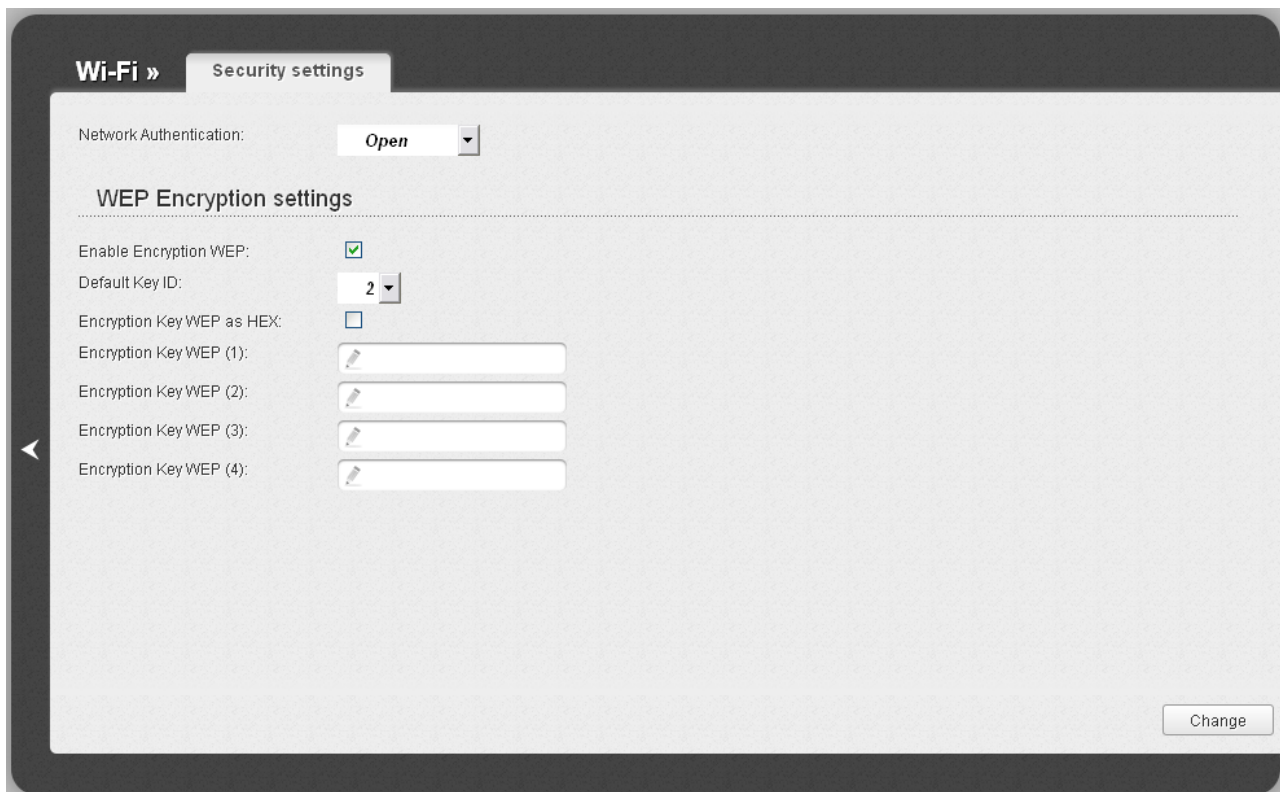

Figure 85. The **Open** value is selected from the **Network Authentication** drop-down list.

| Parameter                        | Description  |
|----------------------------------|--|
| <b>Enable Encryption WEP</b>     | The checkbox activating WEP encryption. When the checkbox is selected, the <b>Default Key ID</b> field, the <b>Encryption Key WEP as HEX</b> checkbox, and four <b>Encryption Key WEP</b> fields are displayed on the page. For the <b>Shared</b> authentication type the checkbox is always selected.   |
| <b>Default Key ID</b>            | The number of the key (from first to fourth) which will be used for WEP encryption.  |
| <b>Encryption Key WEP as HEX</b> | Select the checkbox to set a hexadecimal number as a key for encryption.   |
| <b>Encryption Key WEP (1-4)</b>  | Keys for WEP encryption. The router uses the key selected from the <b>Default Key ID</b> drop-down list. It is required to specify all the fields.<br><br>You can specify keys containing 5 or 13 symbols (use digits and/or Latin characters). If the <b>Encryption Key WEP as HEX</b> checkbox is selected, you can specify only keys containing 10 symbols (the digits 0-9 and the characters A-F). |

When the **WPA-PSK** or **WPA2-PSK** value is selected, the **WPA Encryption settings** section is displayed:

Figure 86. The **WPA2-PSK** value is selected from the **Network Authentication** drop-down list.

| Parameter                      | Description   |
|--------------------------------|---|
| <b>Encryption Key PSK</b>      | A key for WPA encryption. The key can contain digits and/or Latin characters.   |
| <b>WPA2 Pre-authentication</b> | The checkbox activating preliminary authentication (displayed only for the <b>WPA2-PSK</b> authentication type).  |
| <b>WPA Encryption</b>          | An encryption method: <b>TKIP</b> , <b>AES</b> , or <b>TKIP+AES</b> .   |
| <b>WPA renewal</b>             | The time period (in seconds), at the end of which a new key for WPA encryption is generated. When the value <b>0</b> is specified for this field, the key is not renewed. |

When you have configured the parameters, click the **Change** button.

## MAC Filter

On the **Wi-Fi / MAC Filter** page, you can define a set of MAC addresses of devices which will be allowed to access the WLAN, or define MAC addresses of devices which will not be allowed to access the WLAN.

Figure 87. The MAC filter for the wireless network.

By default, MAC filtering is not active (the **Disabled** choice of the **MAC filter restrict mode** radio button is selected).

To open your wireless network for the devices which MAC addresses are specified on the **MAC addresses** tab and to close the wireless network for all other devices, select the **Allow** choice of the **MAC filter restrict mode** radio button and click the **Change** button.

To close your wireless network for the devices which MAC addresses are specified on the **MAC addresses** tab, select the **Deny** choice of the **MAC filter restrict mode** radio button and click the **Change** button.

To add a MAC address to which the selected filtering mode will be applied, proceed to the **MAC addresses** tab.

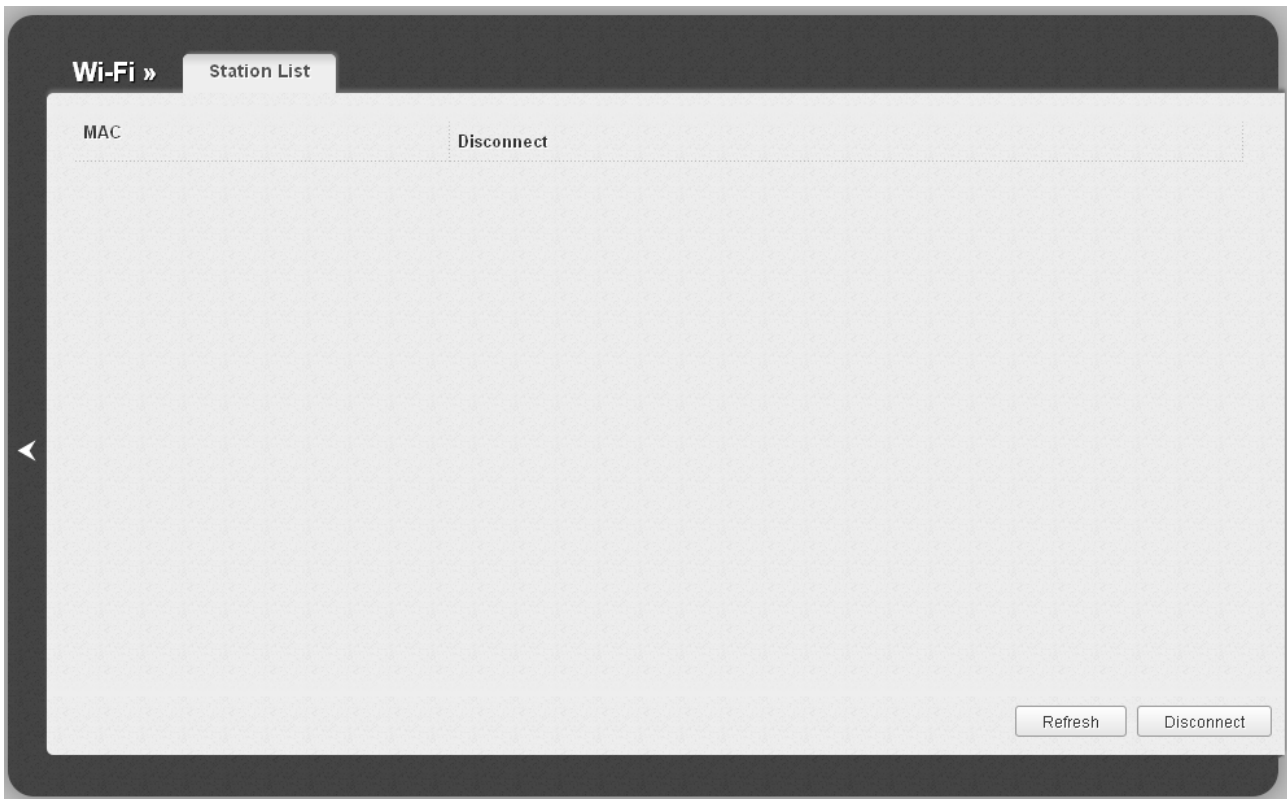

Figure 88. The tab for adding a MAC address.

Enter an address in the **MAC address** field of the **MAC address adding** section and click the **Add** button.

To remove a MAC address from the list of MAC addresses, select the checkbox located to the right of the relevant MAC address in the **MAC address list** section and click the **Delete** button.

## Station List

On the **Wi-Fi / Station List** page, you can view the list of wireless clients connected to the router.

*Figure 89. The list of the wireless clients.*

If you want to disconnect a wireless device from your WLAN, select the checkbox in the line containing the relevant MAC address, and click the **Disconnect** button.

To view the latest data on the devices connected to the WLAN, click the **Refresh** button.

## WPS

On the **Wi-Fi / WPS** page, you can enable the function for secure configuration of the WLAN and select a method used to easily add wireless devices to the WLAN.

The WPS function helps to configure the protected wireless network automatically. Devices connecting to the wireless network via the WPS function must support the WPS function.

**!** If the router's WLAN is splitted into parts (the value **2**, **3**, or **4** is selected from the **MBSSID** drop-down list on the **Wi-Fi / Common settings** page), the WPS function can be used only for the first part of the WLAN (the first value from the **BSSID** drop-down list).

**!** Before using the function you need to configure one of the following authentication types: **Open** with no encryption, **WPA-PSK** or **WPA2-PSK** with the **AES** or **TKIP+AES** encryption method (on the **Wi-Fi / Security settings** page).

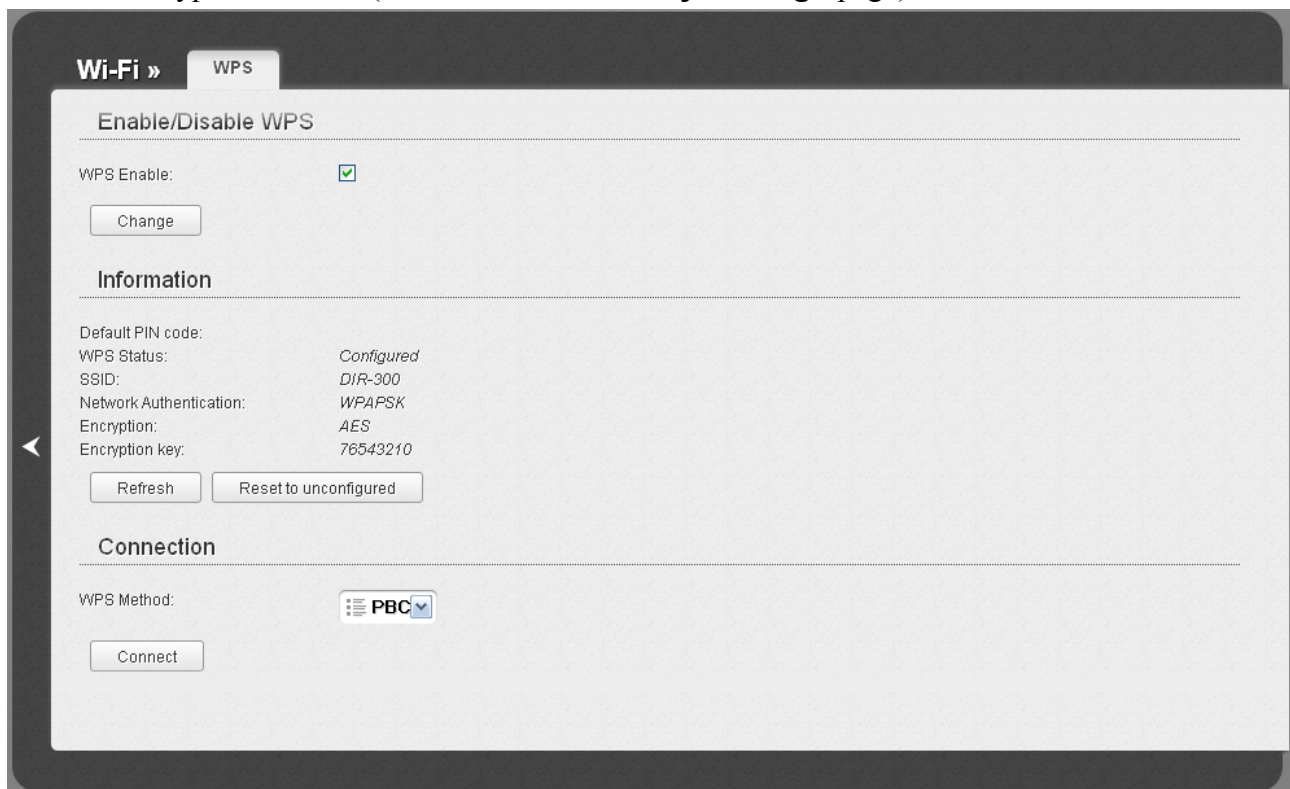

Figure 90. The page for configuring the WPS function.

To activate the WPS function, select the **WPS Enable** checkbox and click the **Change** button. When the checkbox is selected, the **Information** and **Connection** sections are available on the page.

| Parameter                     | Description  |
|-------------------------------|--|
| <b>Default PIN code</b>       | The PIN code of the router. This parameter is used when connecting the router to a registrar to set the parameters of the WPS function.  |
| <b>WPS Status</b>             | The state of the WPS function: <ul style="list-style-type: none"> <li>• <b>Configured</b> (all needed settings are specified)</li> <li>• <b>Unconfigured</b> (you need to specify the relevant settings).</li> </ul>     |
| <b>SSID</b>                   | The name of the router's WLAN (or the first part of the WLAN if the network is splitted into parts).   |
| <b>Network Authentication</b> | The network authentication type specified for the WLAN (or the first part of the WLAN).  |
| <b>Encryption</b>             | The encryption type specified for the WLAN (or the first part of the WLAN).  |
| <b>Encryption key</b>         | The encryption key specified for the WLAN (or the first part of the WLAN).   |
| <b>Refresh</b>                | Click the button to refresh the data on the page.  |
| <b>Reset to unconfigured</b>  | Click the button to reset the parameters of the WPS function.  |
| <b>WPS Method</b>             | A method of the WPS function. Select a value from the drop-down list.<br><b>PIN</b> : Connecting the device via the PIN code.<br><b>PBC</b> : Connecting the device via the push button (actual or virtual).             |
| <b>PIN Code</b>               | The PIN code of the WPS-enabled device that needs to be connected to the wireless network of the router.<br>The field is displayed only when the <b>PIN</b> value is selected from the <b>WPS Method</b> drop-down list. |
| <b>Connect</b>                | Click the button to connect the wireless device to the router's WLAN via the WPS function.   |

## ***Using WPS Function via Web-based Interface***

To add a wireless device via the PIN method of the WPS function, follow the next steps:

1. Select the **WPS Enable** checkbox.
2. Click the **Change** button.
3. Select the **PIN** value from the **WPS Method** drop-down list.
4. Select the PIN method in the software of the wireless device that you want to connect to the router's WLAN.
5. Click the relevant button in the software of the wireless device that you want to connect to the WLAN.
6. Right after that, enter the PIN code specified on the cover of the wireless device or in its software in the **PIN Code** field.
7. Click the **Connect** button in the web-based interface of the router.

To add a wireless device via the PBC method of the WPS function, follow the next steps:

1. Select the **WPS Enable** checkbox.
2. Click the **Change** button.
3. Select the **PBC** value from the **WPS Method** drop-down list.
4. Select the PBC method in the software of the wireless device that you want to connect to the router's WLAN.
5. Click the relevant button in the software or press the WPS button on the cover of the wireless device that you want to connect to the WLAN.
6. Click the **Connect** button in the web-based interface of the router.

## ***Using WPS Function without Web-based Interface***

You can add a wireless device to the router's WLAN without accessing the web-based interface of the router. To do this, you need to configure the following router's settings:

1. Specify corresponding security settings for the wireless network of the router.
2. Select the **WPS Enable** checkbox.
3. Click the **Change** button.
4. Save the settings and close the web-based interface (click the **Save** line in the top-page menu displayed when the mouse pointer is over the **System** caption, then click the **Logout** line).

Later you will be able to add wireless devices to the WLAN by pressing the **WPS** button of the router.

1. Select the PBC method in the software of the wireless device that you want to connect to the router's WLAN.
2. Click the relevant button in the software or press the WPS button on the cover of the wireless device that you want to connect to the WLAN.
3. Press the **WPS** button of the router.

After clicking the button the **WPS** LED blinks green. If the wireless device has been successfully connected to the WLAN, the LED stops blinking and lights green for several minutes.

## Additional Settings

On the **Wi-Fi / Additional settings** page, you can define additional parameters for the WLAN of the router.

**!** Changing parameters presented on this page may negatively affect your WLAN!

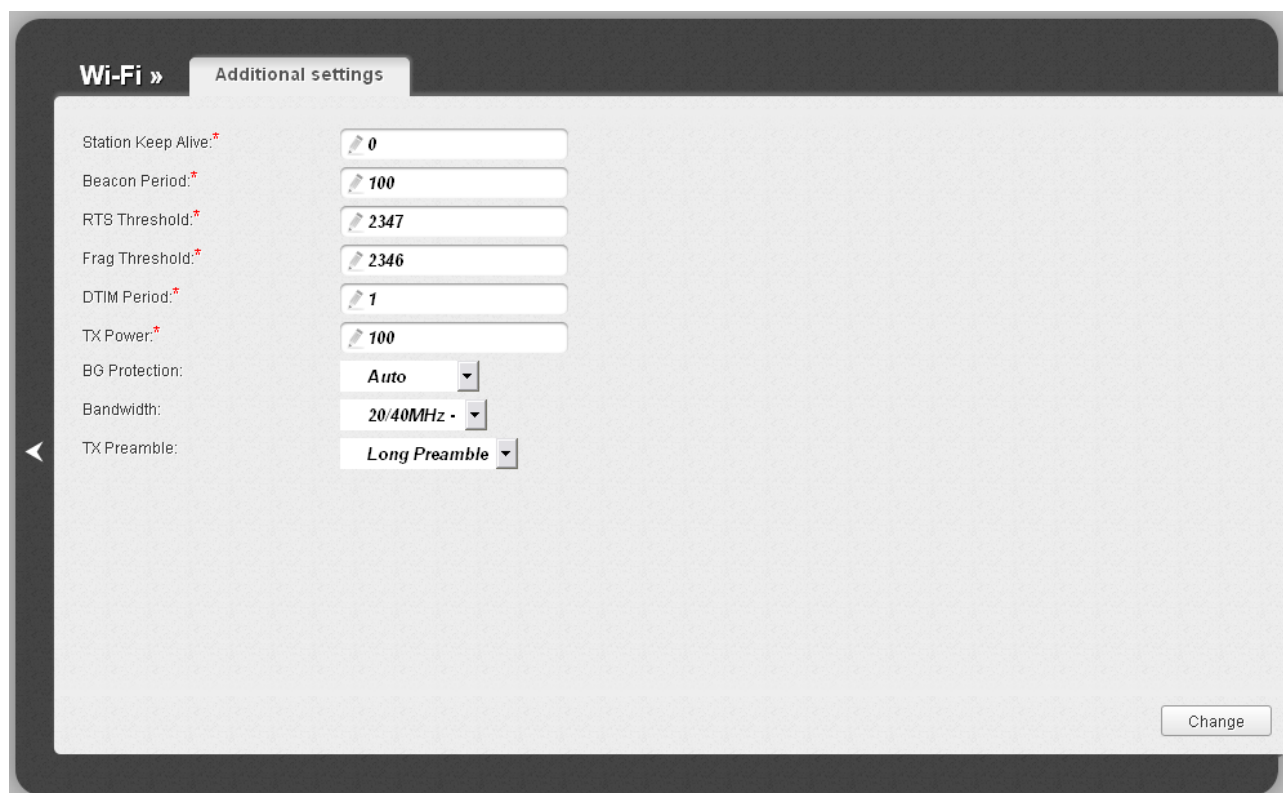

Figure 91. Additional settings of the WLAN.

The following fields are available on the page:

| Parameter                 | Description  |
|---------------------------|--|
| <b>Station Keep Alive</b> | The time interval (in seconds) between keep alive checks of wireless devices from your WLAN. When the value <b>0</b> is specified, the checking is disabled. |
| <b>Beacon Period</b>      | The time interval (in milliseconds) between packets sent to synchronize the wireless network.  |
| <b>RTS Threshold</b>      | The minimum size (in bites) of a packet for which an RTS frame is transmitted.   |
| <b>Frag Threshold</b>     | The maximum size (in bites) of a non-fragmented packet. Larger packets are fragmented (divided).   |

| Parameter            | Description   |
|----------------------|---|
| <b>DTIM Period</b>   | The time period (in seconds) between sending a DTIM (a message notifying on broadcast or multicast transmission) and data transmission.   |
| <b>TX Power</b>      | The transmit power (in percentage terms) of the router.   |
| <b>BG Protection</b> | <p>The 802.11b and 802.11g protection function is used to minimize collisions between devices of your wireless network.</p> <p>Select a value from the drop-down list.</p> <p><b>Auto:</b> The protection function is enabled and disabled automatically depending on the state of the network (this value is recommended if your wireless local area network consists of both 802.11b and 802.11g devices).</p> <p><b>Always On:</b> The protection function is always enabled (this setting can substantially lower the efficiency of your wireless network).</p> <p><b>Always Off:</b> The protection function is always disabled.</p> |
| <b>Bandwidth</b>     | <p>The channel bandwidth for 802.11n devices.</p> <p><b>20MHz:</b> 802.11n devices operate at 20MHz channels.</p> <p><b>40MHz:</b> 802.11n devices operate at 40MHz channels.</p> <p><b>20/40MHz -:</b> 802.11n devices operate at 20MHz and 40MHz channels (the channel is combined with the previous adjacent channel).</p> <p><b>20/40MHz +:</b> 802.11n devices operate at 20MHz and 40MHz channels (the channel is combined with the next adjacent channel).</p>   |
| <b>TX Preamble</b>   | <p>This parameter defines the length of the CRC block sent by the router when communicating to wireless devices.</p> <p>Select a value from the drop-down list.</p> <p><b>Long Preamble.</b></p> <p><b>Short Preamble</b> (this value is recommended for networks with high-volume traffic).</p>  |

When you have configured the parameters, click the **Change** button.

## WMM

On the **Wi-Fi / WMM** page, you can enable the Wi-Fi Multimedia function.

The WMM function implements the QoS features for Wi-Fi networks. It helps to improve the quality of data transfer over Wi-Fi networks by prioritizing different types of traffic.

To enable the function, select the **WMM** checkbox and click the **Change** button.

WMM:

**Parameters of Access Point**

| AC    | Aifsn | CWMin | CWMax | Txop | ACM                      | Ack                      |
|-------|-------|-------|-------|------|--------------------------|--------------------------|
| AC_BK | 7     | 1     | 1023  | 0    | <input type="checkbox"/> | <input type="checkbox"/> |
| AC_BE | 3     | 15    | 63    | 0    | <input type="checkbox"/> | <input type="checkbox"/> |
| AC_VI | 1     | 7     | 15    | 94   | <input type="checkbox"/> | <input type="checkbox"/> |
| AC_VO | 1     | 3     | 7     | 47   | <input type="checkbox"/> | <input type="checkbox"/> |

**Parameters of Station**

| AC    | Aifsn | CWMin | CWMax | Txop | ACM                      |
|-------|-------|-------|-------|------|--------------------------|
| AC_BK | 7     | 15    | 1023  | 0    | <input type="checkbox"/> |
| AC_BE | 3     | 15    | 1023  | 0    | <input type="checkbox"/> |
| AC_VI | 2     | 7     | 15    | 94   | <input type="checkbox"/> |
| AC_VO | 2     | 3     | 7     | 47   | <input type="checkbox"/> |

Change

Figure 92. The page for configuring the WMM function.

**!** All needed settings for the WMM function are specified in the device's system. It is recommended not to change the default values.

The WMM function allows assigning priorities for four Access Categories (AC):

- **AC\_BK** (*Background*), low priority traffic (print jobs, file downloads, etc.).
- **AC\_BE** (*Best Effort*), traffic from legacy devices or devices/applications that do not support QoS.
- **AC\_VI** (*Video*).
- **AC\_VO** (*Voice*).

Parameters of the Access Categories are defined for both the router itself (in the **Parameters of Access Point** section) and wireless devices connected to it (in the **Parameters of Station** section).

For every Access Category the following fields are available:

| Parameter          | Description  |
|--------------------|--|
| <b>Aifsn</b>       | <i>Arbitrary Inter-Frame Space Number.</i> This parameter influences time delays for the relevant Access Category. The lower the value, the higher is the Access Category priority.  |
| <b>CWMin/CWMax</b> | <i>Contention Window Minimum/Contention Window Maximum.</i> Both fields influence time delays for the relevant Access Category. The <b>CWMax</b> field value should not be lower, than the <b>CWMin</b> field value. The lower the difference between the <b>CWMax</b> field value and the <b>CWMin</b> field value, the higher is the Access Category priority. |
| <b>Txop</b>        | <i>Transmission Opportunity.</i> The higher the value, the higher is the Access Category priority.   |
| <b>ACM</b>         | <i>Admission Control Mandatory.</i><br>If selected, prevents from using the relevant Access Category.  |
| <b>Ack</b>         | <i>Acknowledgment.</i> Answering response requests while transmitting. Displayed only in the <b>Parameters of Access Point</b> section.<br>If not selected, the router answers requests.<br>If selected, the router does not answer requests.  |

When you have configured the parameters, click the **Change** button.

## ***Advanced***

In this menu you can configure advanced settings of the router:

- enable the UPnP function
- configure a DDNS service
- add name servers
- define static routes
- create rules for remote access to the web-based interface
- allow the router to use IGMP.

## UPnP

On the **Advanced / UPnP** page, you can enable and disable the UPnP function.

UPnP is a set of networking protocols designed for automatic configuration of network devices. The UPnP function performs automatic configuration of the device's parameters for network applications requiring an incoming connection to the router.

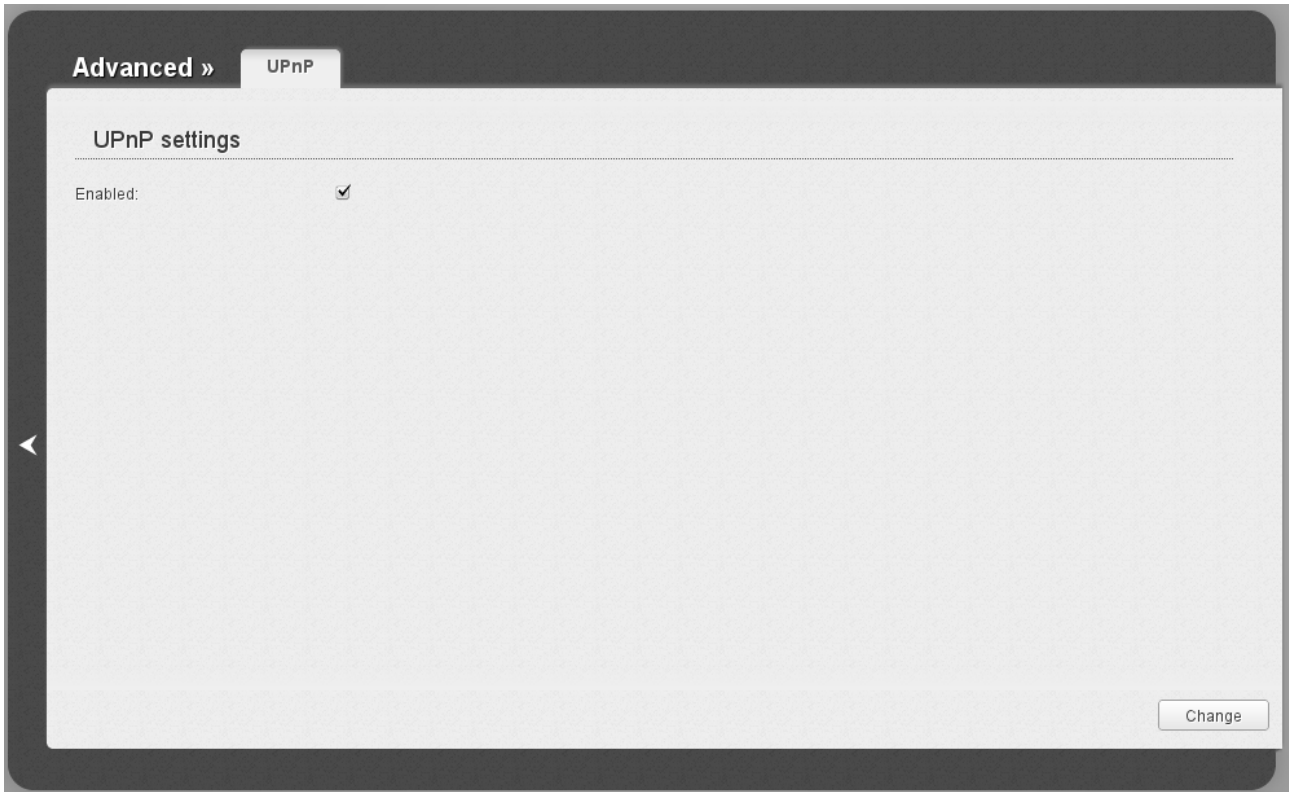

Figure 93. The **Advanced / UPnP** page.

By default, the UPnP function is enabled. If you want to manually specify all parameters needed for network applications, deselect the **Enabled** checkbox and click the **Change** button.

If you want to enable the UPnP function in the router again, select the **Enabled** checkbox and click the **Change** button.

## DDNS

On the **Advanced / DDNS** page, you can define parameters of the DDNS service, which allows associating a domain name with dynamic IP addresses.

Figure 94. The **Advanced / DDNS** page.

To add a new DDNS service, click the **Add** button.

Figure 95. The page for editing the DDNS service.

You can specify the following parameters:

| Parameter            | Description   |
|----------------------|---|
| <b>DDNS Service</b>  | Select a DDNS provider from the drop-down list.   |
| <b>Host name</b>     | The domain name registered at your DDNS provider.   |
| <b>User name</b>     | The username to authorize for your DDNS provider.   |
| <b>User password</b> | The password to authorize for your DDNS provider.   |
| <b>Interface</b>     | Select a WAN connection which IP address will be used to access the DDNS service.   |
| <b>Update period</b> | An interval (in minutes) between sending data with the IP address of the interface specified in the field above to the relevant DDNS service. |

Click the **Change** button.

To edit parameters of the existing DDNS service, click the relevant service link. On the opened page, change the needed parameters and click the **Change** button.

To remove an existing DDNS service, click the relevant service link. On the opened page, click the **Delete** button.

## DNS

On the **Advanced / DNS** page, you can add DNS servers to the system.

Figure 96. The **Advanced / DNS** page.

DNS servers are used to determine the IP address from the name of a server in Intranets or the Internet (as a rule, they are specified by an ISP or assigned by a network administrator).

The device performs the DNS relay function, i.e., it redirects the DNS requests of users to external DNS servers. You can specify the addresses of DNS servers manually on this page, or configure the router to obtain DNS servers addresses automatically from your ISP upon installing a connection.

**!** When you use the built-in DHCP server, the network parameters (including DNS servers) are distributed to clients automatically.

If you want to configure automatic obtainment of DNS servers addresses, deselect the **Manual** checkbox, select a WAN connection which will be used to obtain addresses of DNS servers automatically from the **Interface** drop-down list or select the **Default route** checkbox, so that the router could use the connection set as the default gateway (on the **Net / WAN** page) to obtain DNS server addresses, and click the **Change** button.

If you want to specify the DNS server manually, select the **Manual** checkbox and enter a DNS server address in the **Name servers** list. To specify several addresses, press the Enter key and enter a needed address in the next line. Then click the **Change** button.

To remove a DNS server from the system, remove the relevant line from the **Name servers** field and click the **Change** button.

## Routing

On the **Advanced / Routing** page, you can add static routes (routes for networks that are not connected directly to the device but are available through the interfaces of the device) into the system.

Figure 97. The **Advanced / Routing** page.

To create a new route, click the **Add** button.

Figure 98. The page for adding a static route.

You can specify the following parameters:

| Parameter                  | Description  |
|----------------------------|--|
| <b>Destination network</b> | A destination network to which this route is assigned.   |
| <b>Destination netmask</b> | The destination network mask.  |
| <b>Gateway</b>             | An IP address through which the destination network can be accessed. The field is displayed when the <b>&lt;Auto&gt;</b> value is selected from the <b>Via Interface</b> drop-down list.   |
| <b>Metric</b>              | A metric for the route. The lower the value, the higher is the route priority. <i>Optional.</i>  |
| <b>Via Interface</b>       | Select an interface through which the destination network can be accessed from the drop-down list. If you have selected the <b>&lt;Auto&gt;</b> value of this drop-down list, the router itself sets the interface on the basis of data on connected networks. |

Click the **Save** button.

To edit an existing route, click the relevant route link. On the opened page, change the needed parameters and click the **Save** button.

To remove an existing route, click the relevant route link. On the opened page, click the **Delete** button.

## Remote Access

On the **Advanced / Remote access** page, you can configure access to the web-based interface of the router. By default, the access from external networks to the router is closed. If you need to allow access to the router from the external network, create relevant rules.

Figure 99. The **Advanced / Remote access** page.

To create a new rule, click the **Add** button.

Figure 100. The page for adding a rule for remote management.

You can specify the following parameters:

| Parameter          | Description   |
|--------------------|---|
| <b>IP address</b>  | A host or a subnet to which the rule is applied. To choose a device connected to the router's LAN at the moment, select the relevant value from the drop-down list (the field will be filled in automatically). |
| <b>Mask</b>        | The mask of the subnet.   |
| <b>Protocol</b>    | The protocol available for remote management of the router.   |
| <b>Public port</b> | An external port of the router. You can specify only one port.  |

Click the **Change** button.

To edit a rule for remote access, click the relevant link. On the opened page, change the needed parameters and click the **Change** button.

To remove a rule for remote access, click the relevant link. On the opened page, click the **Delete** button.

## IGMP

On the **Advanced / IGMP** page, you can enable IGMP for the router.

IGMP is used for managing multicast traffic (transferring data to a group of destinations). This protocol allows using network resources for some applications, e.g., for streaming video, more efficiently.

Figure 101. The **Advanced / IGMP** page.

To enable IGMP, select the **Enabled** checkbox. From the **Version** drop-down list, select a version of IGMP. Then click the **Change** button. Such a setting allows using the IGMP Proxy function for all WAN connections for which the **Enable IGMP Multicast** checkbox is selected.

To disable IGMP, deselect the **Enabled** checkbox and click the **Change** button.

## Firewall

In this menu you can configure the firewall of the router:

- add rules for IP filtering
- create virtual servers
- define a DMZ
- configure the MAC filter.

## IP Filters

On the **Firewall / IP filters** page, you can create new rules for filtering IP packets and edit or remove existing rules.

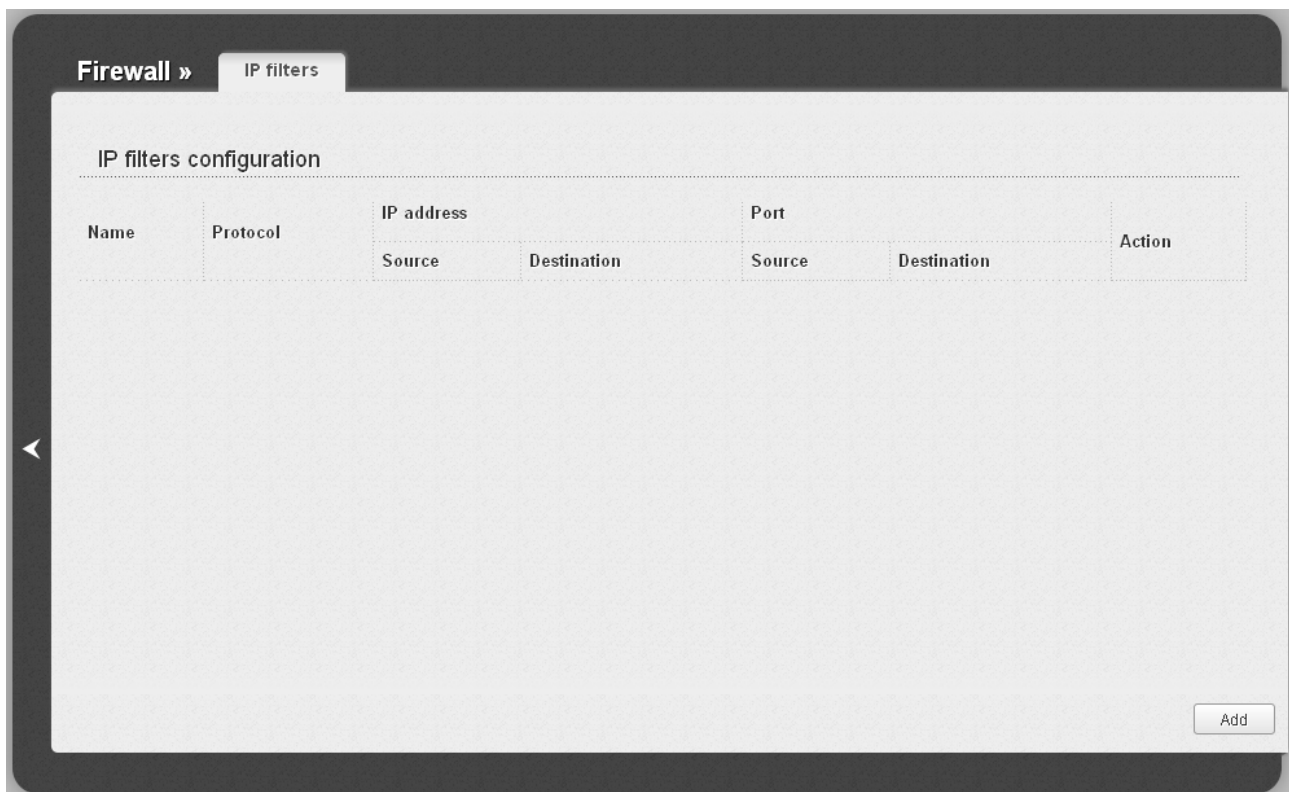

Figure 102. The **Firewall / IP filters** page.

To create a new rule, click the **Add** button.

Figure 103. The page for adding a rule for IP filtering.

You can specify the following parameters:

| Parameter                     | Description  |
|-------------------------------|--|
| <b>IP filter rule editing</b> |  |
| <b>Name</b>                   | A name for the rule for easier identification.   |
| <b>Protocol</b>               | A protocol for network packet transmission. Select a value from the drop-down list.  |
| <b>Action</b>                 | Select an action for the rule.<br><b>ACCEPT:</b> Allows packet transmission in accordance with the criteria specified by the rule.<br><b>DROP:</b> Denies packet transmission in accordance with the criteria specified by the rule. |
| <b>IP Addresses</b>           |  |
| <b>IP address range</b>       | Select the checkbox if you want to specify a range of IP addresses as the source or destination IP address.  |

| Parameter          | Description  |
|--------------------|--|
| <b>Source</b>      | <p>The source host/subnet IP address.</p> <p>If the <b>IP address range</b> checkbox is selected, specify the starting IP address of the range in the <b>Source (first)</b> field and the ending IP address in the <b>Source (last)</b> field.</p> <p>If the <b>IP address range</b> checkbox is not selected, specify the IP address of the host or subnet in the <b>Source</b> field. To specify an IP address add <b>/32</b>.</p> <p>To choose a device connected to the router's LAN at the moment, select the relevant IP address from the drop-down list (the field will be filled in automatically).</p>                              |
| <b>Destination</b> | <p>The destination host/subnet IP address.</p> <p>If the <b>IP address range</b> checkbox is selected, specify the starting IP address of the range in the <b>Destination (first)</b> field and the ending IP address in the <b>Destination (last)</b> field.</p> <p>If the <b>IP address range</b> checkbox is not selected, specify the starting IP address of the host or subnet in the <b>Destination</b> field. To specify an IP address add <b>/32</b>.</p> <p>To choose a device connected to the router's LAN at the moment, select the relevant IP address from the drop-down list (the field will be filled in automatically).</p> |
| <b>Ports</b>       |  |
| <b>Source</b>      | A port of the source IP address. You can specify one port, several ports separated by a comma, or a range of ports separated by a colon.   |
| <b>Destination</b> | A port of the destination IP address. You can specify one port, several ports separated by a comma, or a range of ports separated by a colon.  |

Click the **Change** button.

To edit a rule for IP filtering, click the link to the relevant rule. On the opened page, change the needed parameters and click the **Change** button.

To remove a rule for IP filtering, click the link to the relevant rule. On the opened page, click the **Delete** button.

## Virtual Servers

On the **Firewall / Virtual servers** page, you can create virtual servers for redirecting incoming Internet traffic to a specified IP address in the local area network.

Figure 104. The **Firewall / Virtual servers** page.

To create a new virtual server, click the **Add** button.

Figure 105. The page for adding a virtual server.

You can specify the following parameters:

| Parameter   | Description  |
|---|--|
| <b>Template</b>                                     | Select a virtual server template from the drop-down list, or select <b>Custom</b> to specify all parameters of the new virtual server manually.  |
| <b>Name</b>   | A name for the virtual server for easier identification. You can specify any name.   |
| <b>Interface</b>                                    | A WAN connection to which this virtual server will be assigned.  |
| <b>Protocol</b>                                     | A protocol that will be used by the new virtual server. Select a value from the drop-down list.  |
| <b>Public port (begin)/<br/>Public port (end)</b>   | A port of the router from which traffic is directed to the IP address specified in the <b>Private IP</b> field. Specify the start and the end value for the port range. If you need to specify one port, enter the needed value in the <b>Public port (begin)</b> field and leave the <b>Public port (end)</b> field blank.                |
| <b>Private port (begin)/<br/>Private port (end)</b> | A port of the IP address specified in the <b>Private IP</b> field to which traffic is directed from the <b>Public port</b> . Specify the start and the end value for the port range. If you need to specify one port, enter the needed value in the <b>Private port (begin)</b> field and leave the <b>Private port (end)</b> field blank. |

| Parameter         | Description  |
|-------------------|--|
| <b>Private IP</b> | The IP address of the server from the local area network. To choose a device connected to the router's LAN at the moment, select the relevant value from the drop-down list (the field will be filled in automatically). |
| <b>Remote IP</b>  | The IP address of the server from the external network.  |

Click the **Change** button.

To edit the parameters of an existing server, follow the link with the name of the server. On the opened page, change the needed parameters and click the **Change** button.

To remove an existing server, follow the link with the name of the server. On the opened page, click the **Delete** button.

## DMZ

A DMZ is a host or network segment located “between” internal (local) and external (global) networks. In the router, the DMZ implements the capability to transfer a request coming to a port of the router from the external network to a specified host of the internal network.

On the **Firewall / DMZ** page you can specify the IP address of the DMZ host.

Figure 106. The **Firewall / DMZ** page.

To enable the DMZ, select the **Enabled** checkbox, enter the IP address of a host from your network in the **IP address** field, and click the **Change** button.

Note that when the DMZ is enabled, all traffic coming to a port of the WAN interface of the router is directed to the same port of the specified IP address. Also note that virtual servers have higher priority than the DMZ host. In other words, if there has been created a virtual server that directs traffic from external port 80 to a port of the device from the router's local network, then entering **http://router\_WAN\_IP** in the address bar, users of the external network are directed to the specified port and IP address configured for the virtual server, but not to port 80 of the device with the IP address specified on the **Firewall / DMZ** page.

To disable the DMZ, deselect the **Enabled** checkbox and click the **Change** button.

## MAC Filter

On the **Firewall / MAC filter** page, you can configure MAC-address-based filtering for computers of the router's LAN.

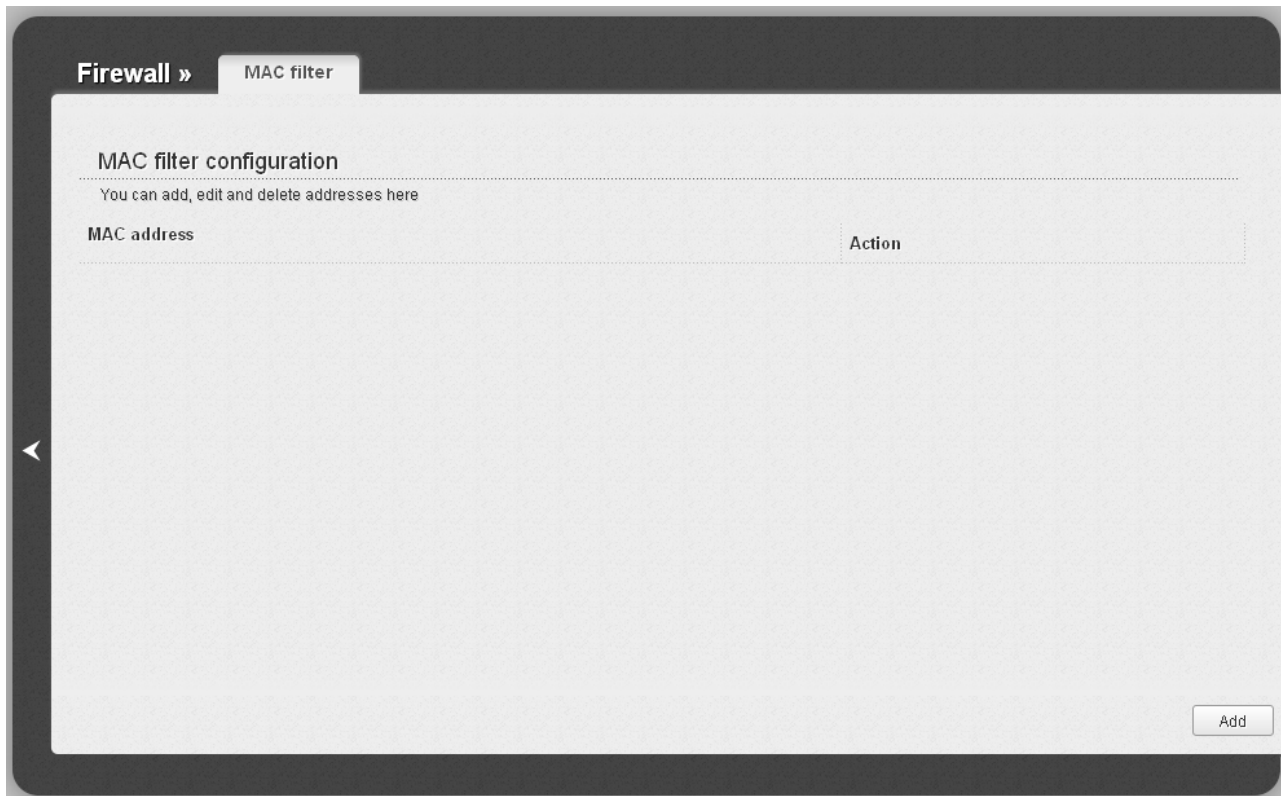

Figure 107. The **Firewall / MAC filter** page.

To specify a new address for the MAC filter, click the **Add** button.

Figure 108. The page for adding an address for the MAC filter.

On the opened page, enter the MAC address of the device from the router's LAN in the **MAC address** field. To choose a device connected to the router's LAN at the moment, select the relevant value from the drop-down list (the field will be filled in automatically). Then select the **Deny** value from the **Action** drop-down list and click the **Change** button.

To remove an address from the list of MAC addresses for filtering, select the line with the relevant MAC address. On the opened page, click the **Delete** button.

## Control

This menu is designed to create restrictions on access to certain web sites.

### URL Filter

On the **Control / URL filter** page, you can specify restrictions on access to certain web sites.

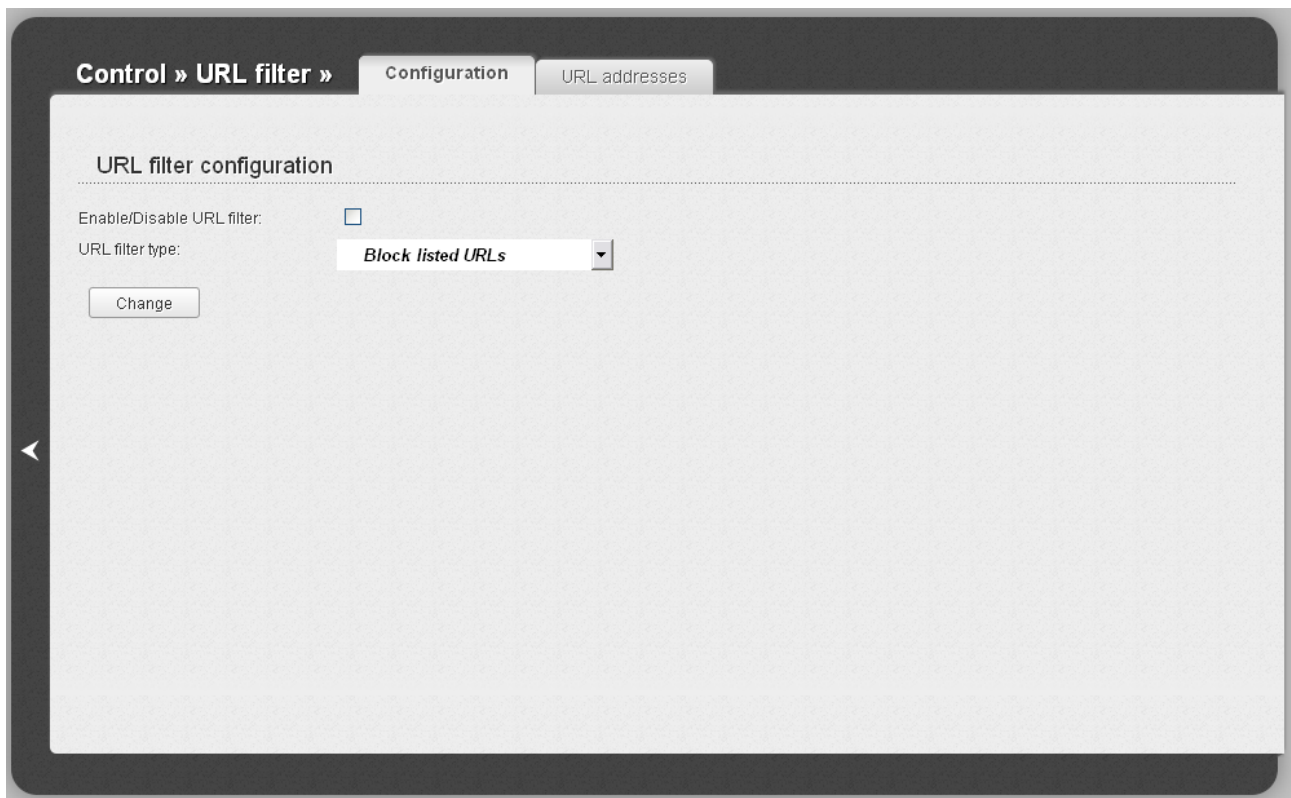

Figure 109. The **Control / URL filter** page. The **Configuration** tab.

To enable the URL filter, select the **Enable/Disable URL filter** checkbox on the **Configuration** tab, then select a needed mode from the **URL filter type** drop-down list:

- **Block listed URLs:** when this value is selected, the router blocks access to all addresses specified on the **URL addresses** tab;
- **Block all URLs except listed:** when this value is selected, the router allows access to addresses specified on the **URL addresses** tab and blocks access to all other web sites.

Click the **Change** button.

To specify URL addresses to which the selected filtering will be applied, go to the **URL addresses** tab and click the **Add** button.

Figure 110. The **Control / URL filter** page. The **URL addresses** tab.

On the opened page, specify the needed parameters.

Figure 111. The page for adding an address for the URL filter.

Enter a URL address in the **URL address** field and click the **Save** button.

To remove an address from the list of URL addresses, select the relevant address in the table on the **URL addresses** tab and click the **Delete** button.

To disable the URL filter, deselect the **Enable/Disable URL filter** checkbox on the **Configuration** tab, then click the **Change** button.

## System

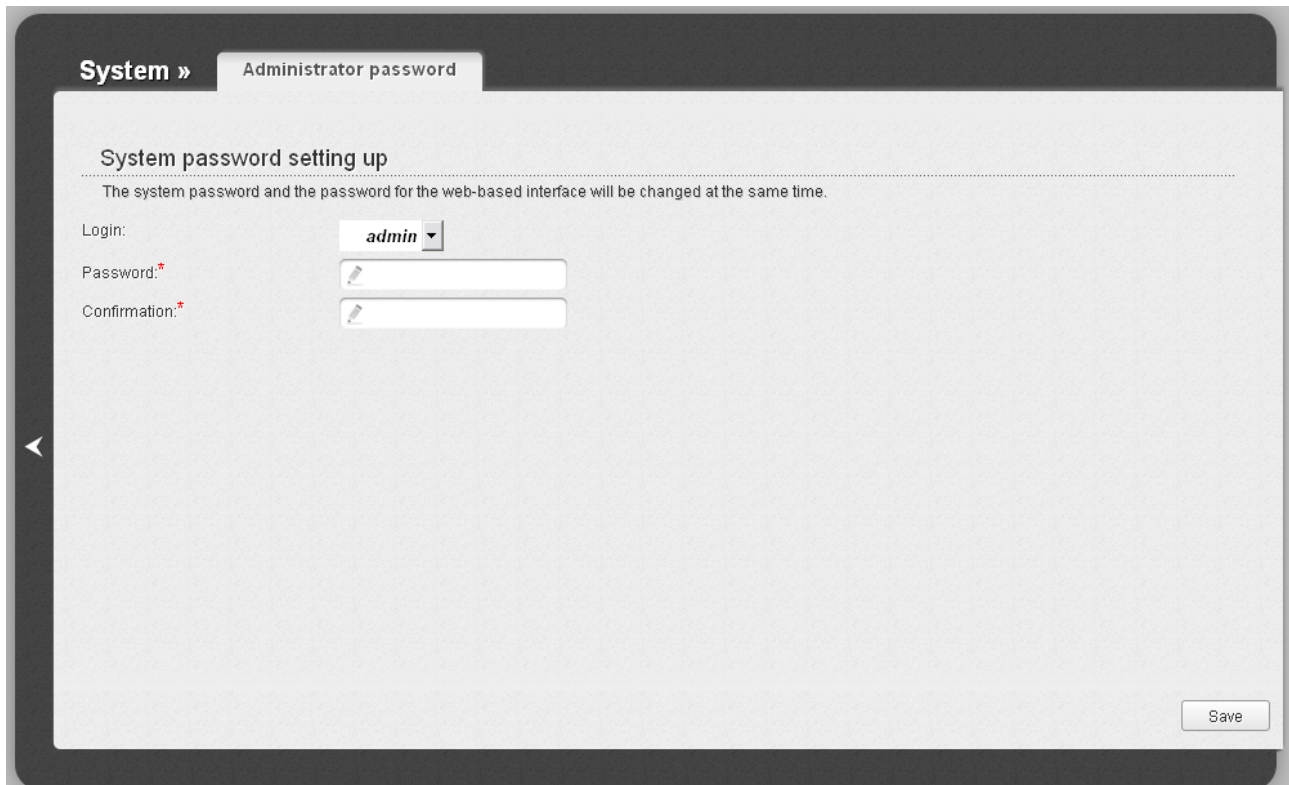

In this menu you can do the following:

- change the password used to access the router's settings
- save the current settings to the non-volatile memory
- create a backup of the router's configuration
- restore the router's configuration from a previously saved file
- restore the factory default settings
- view the system log
- update the firmware of the router
- configure automatic synchronization of the system time
- check availability of a host on the Internet through the web-based interface of the router
- trace the route to a host
- allow or forbid access to the router via TELNET.

## Administrator Password

On the **System / Administrator password** page, you can change the password for the administrator account used to access the web-based interface of the router and to access the device settings via TELNET.

**!** For security reasons, it is strongly recommended to change the administrator password upon initial configuration of the router.

The screenshot shows a web-based interface for configuring the administrator password. At the top, there are two tabs: 'System »' and 'Administrator password'. Below the tabs, the page title is 'System password setting up'. A note states: 'The system password and the password for the web-based interface will be changed at the same time.' The form includes a 'Login:' dropdown menu with 'admin' selected, and two password input fields labeled 'Password:' and 'Confirmation:'. A 'Save' button is located at the bottom right of the form area.

Figure 112. The page for modifying the administrator password.

Enter the new password in the **Password** and **Confirmation** fields and click the **Save** button.

## Configuration

On the **System / Configuration** page, you can save the changed settings to the non-volatile memory, restore the factory defaults, backup the current configuration, or restore the router's configuration from a previously created file.

Figure 113. The **System / Configuration** page.

The following buttons are available on the page:

| Control        | Description   |
|----------------|---|
| <b>Save</b>    | Click the button to save settings to the non-volatile memory. Please, save settings every time you change the router's parameters. Otherwise the changes will be lost upon hardware reboot of the router.                               |
| <b>Factory</b> | Click the button to restore the factory default settings. Also you can restore the factory defaults via the hardware <b>RESET</b> button (see the <i>Saving and Restoring Settings</i> section, page 30).                               |
| <b>Backup</b>  | Click the button and follow the dialog box appeared to save the configuration (all settings of the router) to your PC.  |
| <b>Restore</b> | Click the button to upload a previously saved configuration (all settings of the router) from a file on your PC. Click the <b>Choose/Browse</b> <sup>1</sup> button to select a previously saved configuration file located on your PC. |

Actions of the **Save**, **Factory**, and **Backup** buttons also can be performed via the top-page menu displayed when the mouse pointer is over the **System** caption.

---

1 The name of the button depends upon the web browser that you use.

## System Log

On the **System / System log** page, you can set the system log options and configure sending the system log to a remote host.

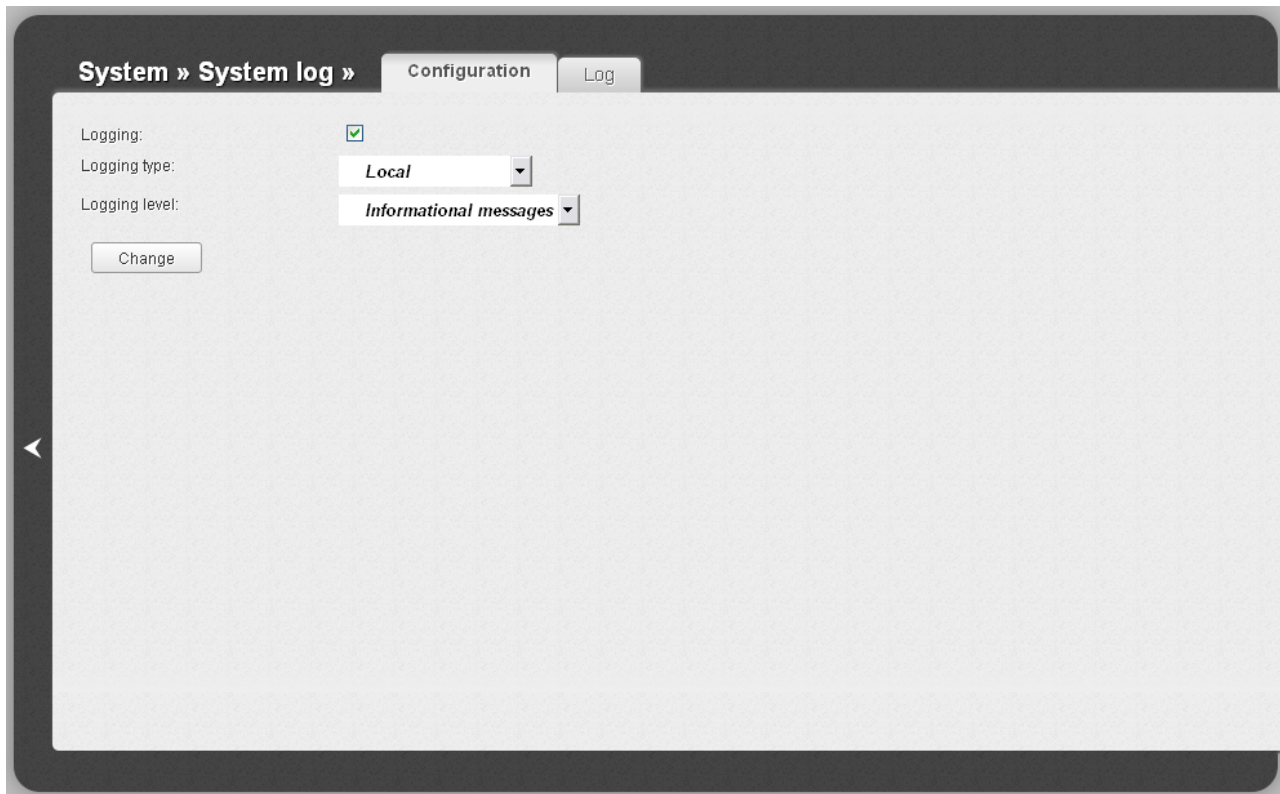

Figure 114. The **System / System log** page. The **Configuration** tab.

To enable logging of the system events, select the **Logging** checkbox on the **Configuration** tab. Then specify the needed parameters.

| Control              | Description   |
|----------------------|---|
| <b>Logging type</b>  | <p>Select a type of logging from the drop-down list.</p> <ul style="list-style-type: none"> <li>• <b>Local:</b> the system log is stored in the router's memory (and displayed on the <b>Log</b> tab). When this value is selected, the <b>Server address type</b>, <b>Server</b>, and <b>Port</b> fields are not displayed.</li> <li>• <b>Remote:</b> the system log is sent to the remote host specified in the <b>Server</b> field.</li> <li>• <b>Local and remote:</b> the system log is stored in the router's memory (and displayed on the <b>Log</b> tab) and sent to the remote host specified in the <b>Server</b> field.</li> </ul> |
| <b>Logging level</b> | Select a type of messages and alerts/notifications to be logged.  |

| Control                    | Description   |
|----------------------------|---|
| <b>Server address type</b> | From the drop-down list, select the <b>IP</b> value to specify an IP address of a host from the local or global network, or the <b>URL</b> value to specify a URL address of a remote server. |
| <b>Server</b>              | The IP or URL address of the host from the local or global network, to which the system log will be sent.   |
| <b>Port</b>                | A port of the host specified in the <b>Server</b> field. By default, the value <b>514</b> is specified.   |

After specifying the needed parameters, click the **Change** button.

To disable logging of the system events, deselect the **Logging** checkbox and click the **Change** button.

On the **Log** tab, the events specified in the **Logging level** list are displayed.

Figure 115. The **System / System log** page. The **Log** tab.

To view the latest system events, click the **Refresh** button.

To save the system log to your PC, click the **Export** button and follow the dialog box appeared.

## Firmware Upgrade

On the **System / Firmware upgrade** page, you can upgrade the firmware of the router.

**!** Upgrade the firmware only when the router is connected to your PC via a wired connection.

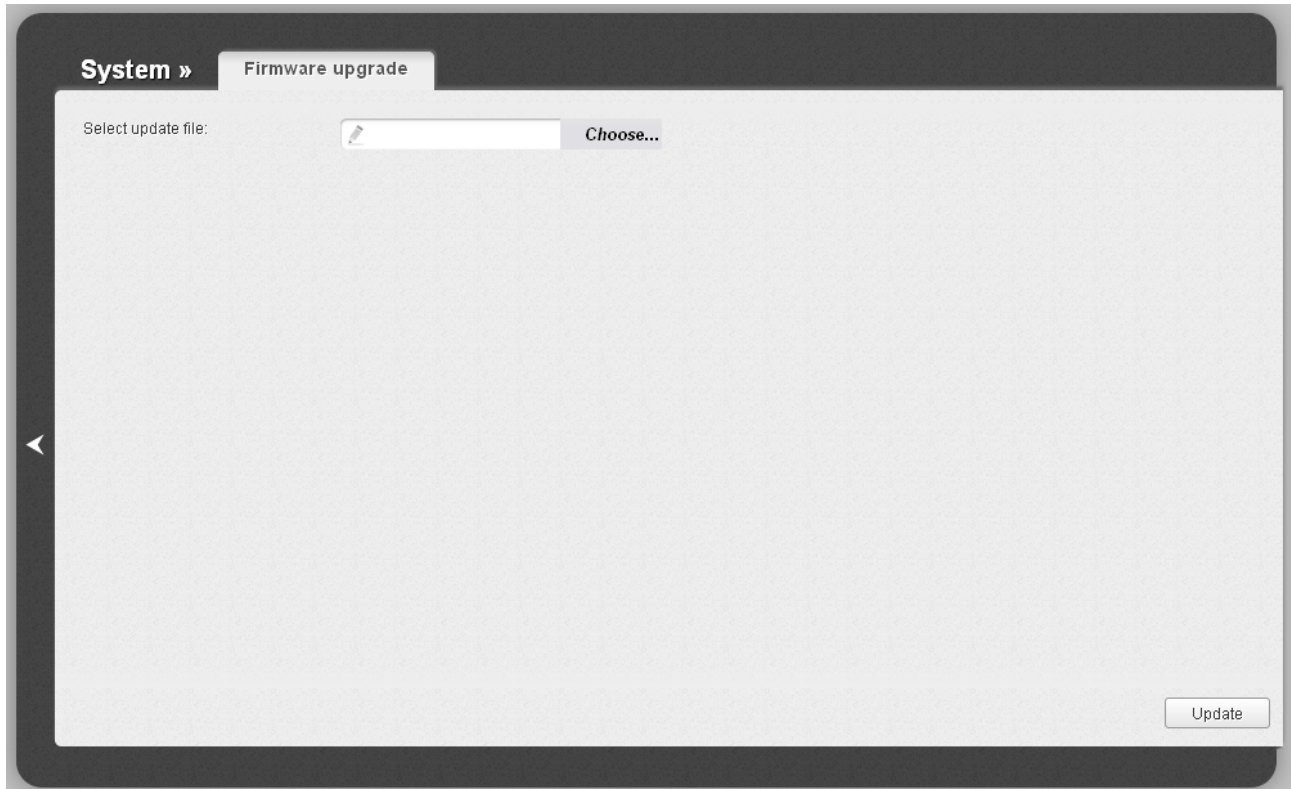

Figure 116. The **System / Firmware upgrade** page.

The current version of the router's firmware is displayed in the **Firmware version** field located next the D-Link logo in the top left corner of the page. If you need to install a newer version of the firmware, follow the next steps:

**!** Attention! Do not turn off the router before the firmware upgrade is completed. This may cause the device breakdown.

1. Download a new version of the firmware from [www.dlink.ru](http://www.dlink.ru).
2. Click the **Choose/Browse**<sup>2</sup> button on the **System / Firmware upgrade** page to locate the new firmware file.
3. Click the **Update** button to upgrade the firmware of the router.
4. Wait until the router is rebooted (about one and a half or two minutes).
5. Log into the web-based interface using the login (**admin**) and the current password.

---

<sup>2</sup> The name of the button depends upon the web browser that you use.

6. Select the **Factory** line in the top-page menu displayed when the mouse pointer is over the **System** caption.
7. Wait until the router is rebooted. Log into the web-based interface, using the default IP address, login and password (**192.168.0.1**, **admin**, **admin**).

## NTP Client

On the **System / NTP client** page, you can configure automatic synchronization of the system time with a time server on the Internet.

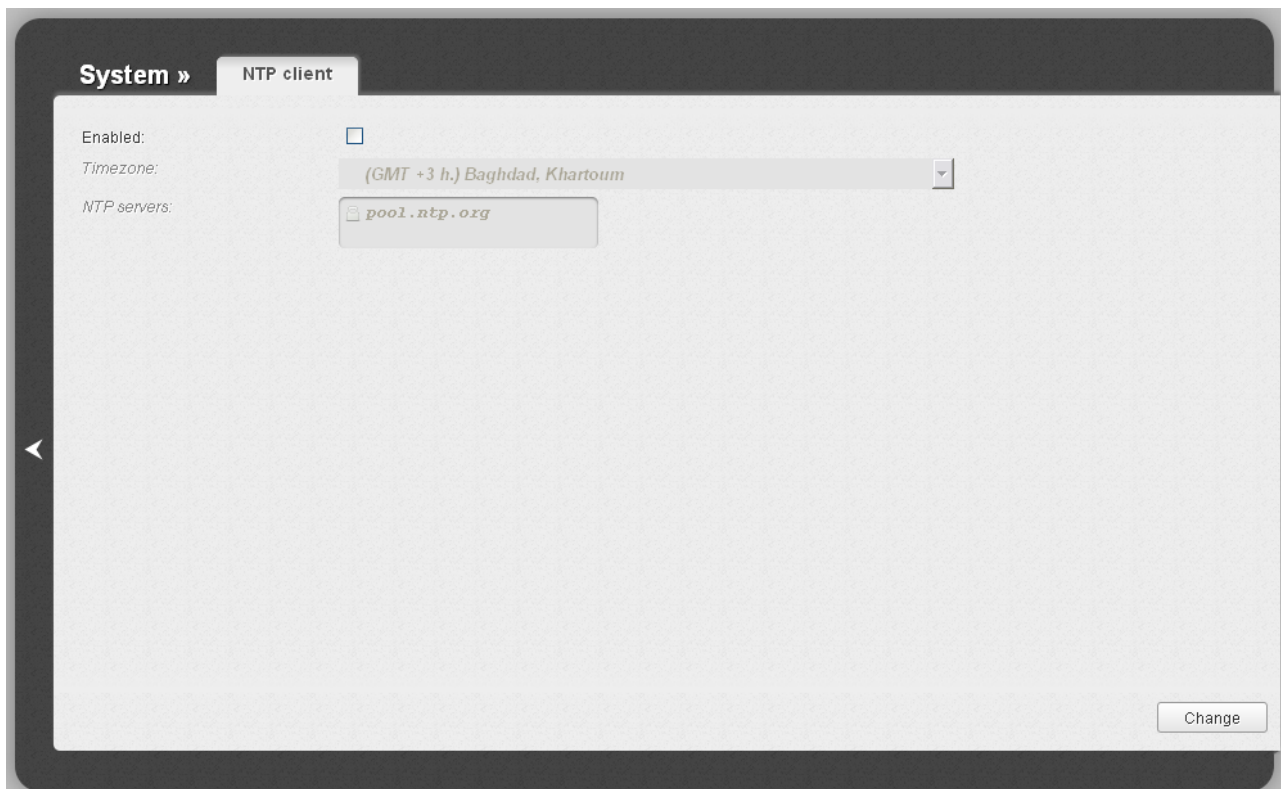

Figure 117. The **System / NTP client** page.

To enable automatic synchronization with a time server:

1. Select the **Enabled** checkbox.
2. Select your time zone.
3. Specify the needed NTP server in the **NTP servers** field or leave the server specified by default.
4. Click the **Change** button.

When the router is powered off or rebooted, the system time is reset to the default value. If you have set automatic synchronization for the system time, the internal clock of the device will be configured after connecting to the Internet.

## Ping

On the **System / Ping** page, you can check availability of a host from the local or global network via the Ping utility.

The Ping utility sends echo requests to a specified host and receives echo replies.

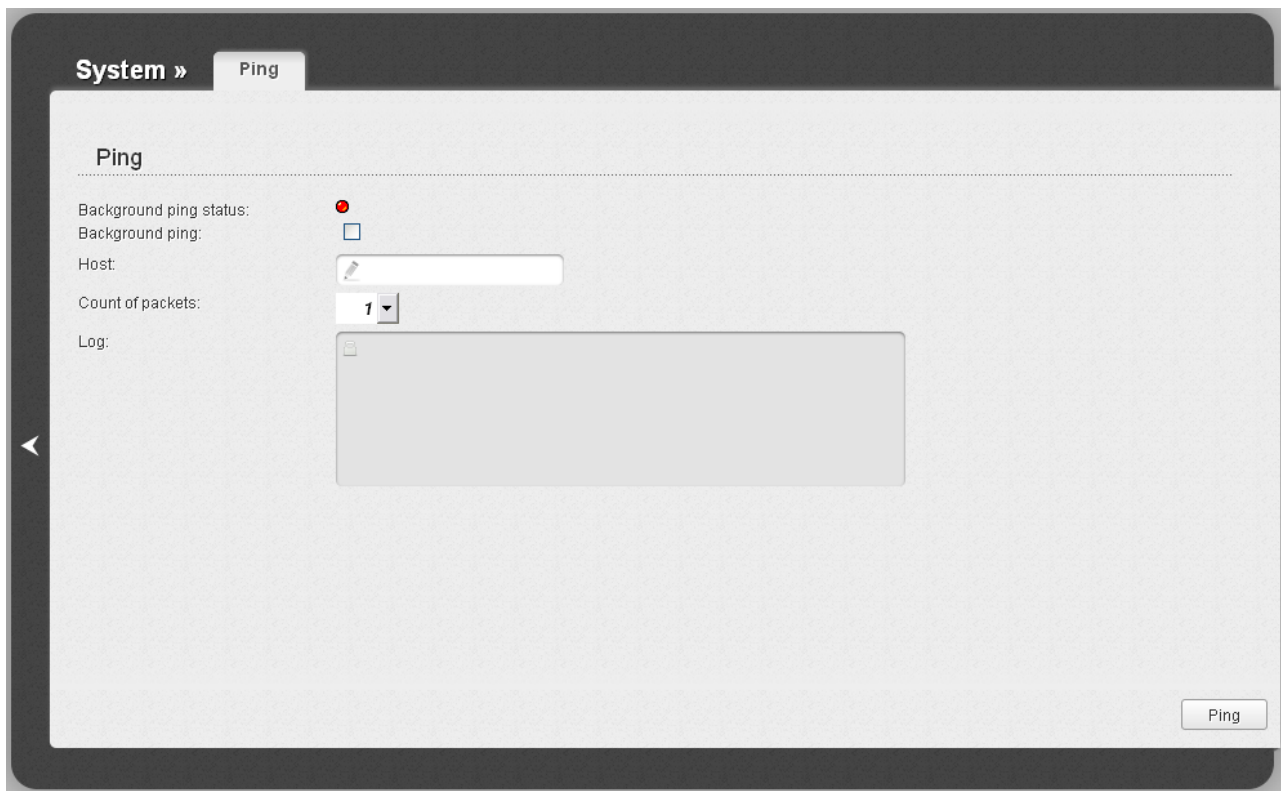

Figure 118. The **System / Ping** page.

To check availability of a host, enter the IP address or name of this host in the **Host** field, and select a number of requests that will be sent in order to check its availability from the **Count of packets** drop-down list. Click the **Ping** button. The check results will be displayed in the **Log** field.

Also you can run the Ping function in the background mode. To do this, select the **Background ping** checkbox. Then enter the IP address or name of a host in the **Host** field and click the **Ping** button. When this mode is selected, the **Count of packets** and **Log** fields are not displayed.

In the background mode, the Ping utility sends requests to the host specified in the **Host** field every 40 seconds. The **Background ping status** light shows the status of the Ping function (green light: the function is running, red light: the function is not running).

To stop running the Ping function in the background mode, deselect the **Background ping** checkbox, enter the IP address or name of a host in the **Host** field, and click the **Ping** button.

## Traceroute

On the **System / Traceroute** page, you can define the route of data transfer to a host via the traceroute utility.

Figure 119. The **System / Traceroute** page.

To define the route, enter the name or IP address of a host in the **Host** field and click the **Start** button. After a while, the results will be displayed on the page.

## Telnet

On the **System / Telnet** page, you can enable or disable access to the device settings via TELNET from your LAN. By default, access is enabled.

Figure 120. The **System / Telnet** page.

To disable access via TELNET, deselect the **On** checkbox and click the **Change** button.

To enable access via TELNET again, select the **On** checkbox. In the **Port** field, enter the number of the router's port through which access will be allowed (by default, the port **23** is specified). Then click the **Change** button.

## CHAPTER 5. OPERATION GUIDELINES

### ***Safety Instructions***

Place your router on a flat horizontal surface or mount the router on the wall (the mounting holes are located on the bottom panel of the device). Make sure that the router is provided with sufficient ventilation.

To prevent overheating, do not obstruct the ventilation openings of the router.

Plug the router into a surge protector to reduce the risk of damage from power surges and lightning strikes.

Operate the router only from an electrical outlet with the correct power source as indicated on the adapter.

Do not open the cover of the router. Otherwise any warranty will be invalidated.

Unplug the equipment before dusting and cleaning. Use a damp cloth to clean the equipment. Do not use liquid/aerosol cleaners or magnetic/static cleaning devices.

### ***Wireless Installation Considerations***

The DIR-300 device lets you access your network using a wireless connection from virtually anywhere within the operating range of your wireless network. Keep in mind, however, that the number, thickness and location of walls, ceilings, or other objects that the wireless signals must pass through, may limit the range. Typical ranges vary depending on the types of materials and background RF noise in your home or office. To maximize your wireless range, follow the guidelines below.

1. Keep the number of walls and ceilings between the DIR-300 device and other network devices to a minimum – each wall or ceiling can reduce your wireless network range by 3-90 feet (1-30 meters).
2. Be aware of the direct line between network devices. Place your devices so that the signal travels straight through a wall or ceiling (instead of at an angle) for better reception.
3. Building materials make a difference. A solid metal door or aluminum studs may have a negative effect on your wireless range. Try to position your router, access points, and computers so that the signal passes through drywalls or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.
4. Keep your router away (at least 3-6 feet or 1-2 meters) from electrical devices or appliances that generate RF noise.
5. If you are using 2.4 GHz cordless phones or X-10 equipment (wireless devices such as ceiling fans, lights, and home security systems), your wireless connection may degrade dramatically or drop completely. Make sure your 2.4 GHz phone base is as far away from your wireless devices as possible. Note, that the base transmits a signal even if the phone is not in use.

## ***Connecting to Cable or DSL Modem***

If you need to connect the router to a cable or DSL modem, do the following.

1. Place the router in an open location in the supposed center of your wireless network. Do not plug the power adapter into the router.
2. Turn off your PC.
3. Unplug the Ethernet cable (that connects your PC to your modem) from your computer and place it into the **INTERNET** port of your router.
4. Plug another Ethernet cable into one of the four LAN ports on the router. Plug the other end into the Ethernet port of your PC.
5. Turn on your modem. Wait until the modem is booted (about 30 seconds).
6. Plug the power adapter to the router and connect to an electrical outlet or power strip. Wait until the router is booted (about 30 seconds).
7. Turn on your PC.
8. Verify the LEDs of the router. The following LEDs should be on: **Power**, **LAN** (of the relevant Ethernet port), and **Internet**. If not, make sure that your computer, modem, and router are powered on and the relevant cables are connected correctly.

## CHAPTER 6. ABBREVIATIONS AND ACRONYMS

|              |                                       |
|--------------|---------------------------------------|
| <b>AC</b>    | Access Category                       |
| <b>AES</b>   | Advanced Encryption Standard          |
| <b>ARP</b>   | Address Resolution Protocol           |
| <b>BSSID</b> | Basic Service Set Identifier          |
| <b>CRC</b>   | Cyclic Redundancy Check               |
| <b>DDNS</b>  | Dynamic Domain Name System            |
| <b>DDoS</b>  | Distributed Denial of Service         |
| <b>DHCP</b>  | Dynamic Host Configuration Protocol   |
| <b>DMZ</b>   | DeMilitarized Zone                    |
| <b>DNS</b>   | Domain Name System                    |
| <b>DTIM</b>  | Delivery Traffic Indication Message   |
| <b>GMT</b>   | Greenwich Mean Time                   |
| <b>IGMP</b>  | Internet Group Management Protocol    |
| <b>IP</b>    | Internet Protocol                     |
| <b>ISP</b>   | Internet Service Provider             |
| <b>L2TP</b>  | Layer 2 Tunneling Protocol            |
| <b>LAN</b>   | Local Area Network                    |
| <b>LCP</b>   | Link Control Protocol                 |
| <b>MAC</b>   | Media Access Control                  |
| <b>MTU</b>   | Maximum Transmission Unit             |
| <b>NAT</b>   | Network Address Translation           |
| <b>NTP</b>   | Network Time Protocol                 |
| <b>PBC</b>   | Push Button Configuration             |
| <b>PIN</b>   | Personal Identification Number        |
| <b>PPPoE</b> | Point-to-point protocol over Ethernet |
| <b>PPTP</b>  | Point-to-point tunneling protocol     |
| <b>PSK</b>   | Pre-shared key                        |
