

DAP-1610

AC1200 Wi-Fi Range Extender

BEFORE YOU BEGIN

Delivery Package

- Extender DAP-1610
- “*Quick Installation Guide*” (brochure).

If any of the items are missing, please contact your reseller.

The “*User Manual*” and “*Quick Installation Guide*” documents are available on D-Link website (see www.dlink.ru).

Using a power supply with different parameters than those indicated on the device will cause damage and void the warranty for this product.

Default Settings

Domain name of device		dlinkap.local.
IP address of device		192.168.0.50
Username (login)		admin
Password		admin
Name of wireless network (SSID)	2.4GHz	DAP-1610
	5GHz	DAP-1610-5G
Network key (PSK password)		see WPS PIN on the barcode label on the back panel of the device

System Requirements and Equipment

- A router enabled to access the Internet.
- A computer with any operating system that supports a web browser.
- A web browser to access the web-based interface of the device:
 - Apple Safari 8 and later
 - Google Chrome 48 and later
 - Microsoft Internet Explorer 10 and later
 - Microsoft Edge 20.10240 and later
 - Mozilla Firefox 44 and later
 - Opera 35 and later.
- A NIC (Ethernet or Wi-Fi adapter) to connect to the extender.
- An 802.11a, b, g, n, or ac Wi-Fi adapter to create a wireless network.

CONNECTING TO PC

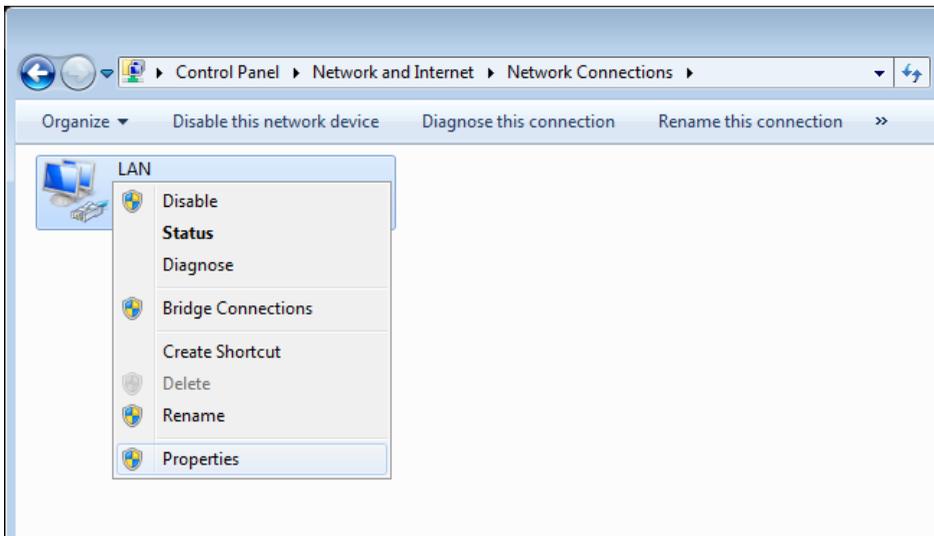

PC with Ethernet Adapter

1. Connect an Ethernet cable between the Ethernet port of the extender and the Ethernet port of your PC.
2. Plug the device into an electrical outlet or power strip.

Now you need to configure an IP address for the Ethernet adapter of your PC.

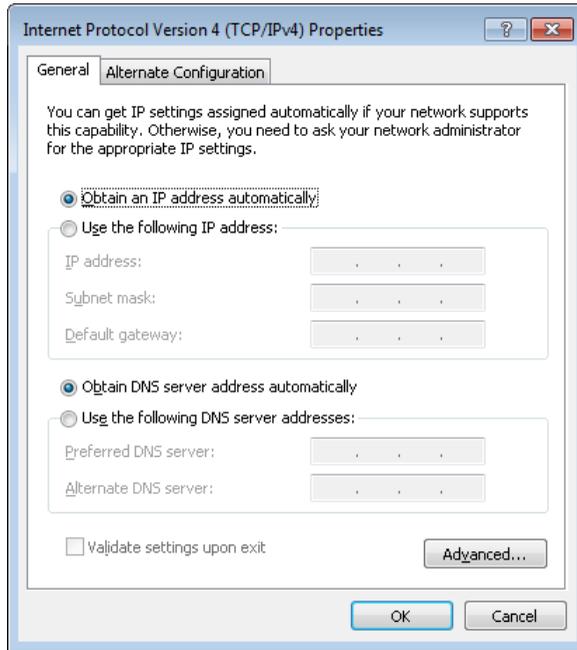

Obtaining IP Address Automatically in OS Windows 7

1. Click the **Start** button and proceed to the **Control Panel** window.
2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)
3. In the menu located on the left part of the window, select the **Change adapter settings** line.
4. In the opened window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

5. In the **Local Area Connection Properties** window, on the **Networking** tab, select the **Internet Protocol Version 4 (TCP/IPv4)** line. Click the **Properties** button.

6. Select the **Obtain an IP address automatically** and **Obtain DNS server address automatically** radio buttons. Click the **OK** button.

7. Click the **OK** button in the connection properties window.

Now your computer is configured to obtain an IP address automatically.

PC with Wi-Fi Adapter

1. Plug the device into an electrical outlet or power strip.
2. Turn on your Wi-Fi adapter. As a rule, modern notebooks with built-in wireless NICs are equipped with a button or switch that turns on/off the wireless adapter (refer to your PC documents). If your PC is equipped with a pluggable wireless NIC, install the software provided with your Wi-Fi adapter.

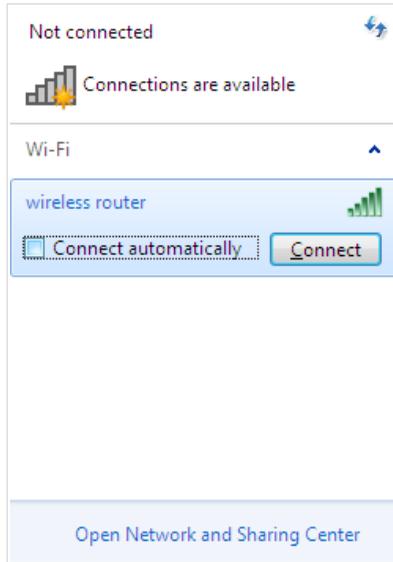

Now you should configure your Wi-Fi adapter.

Configuring Wi-Fi Adapter in OS Windows 7

1. Click the **Start** button and proceed to the **Control Panel** window.
2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)
3. In the menu located on the left part of the window, select the **Change adapter settings** line.
4. In the opened window, select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.
5. To open the list of available wireless networks, select the icon of the wireless network connection and click the **Connect To** button or left-click the network icon in the notification area located on the right side of the taskbar.

- In the opened window, in the list of available wireless networks, select the wireless network **DAP-1610** (for operating in the 2.4GHz band) or **DAP-1610-5G** (for operating in the 5GHz band) and click the **Connect** button.

- In the opened window, enter the network key (see WPS PIN on the barcode label on the back panel of the device) in the **Security key** field and click the **OK** button.
- Wait for about 20-30 seconds. After the connection is established, the network icon will be displayed as the signal level scale.

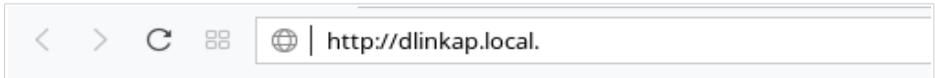

If you perform initial configuration of the access point via Wi-Fi connection, note that immediately after changing the wireless default settings of the access point you will need to reconfigure the wireless connection using the newly specified settings.

CONFIGURING EXTENDER

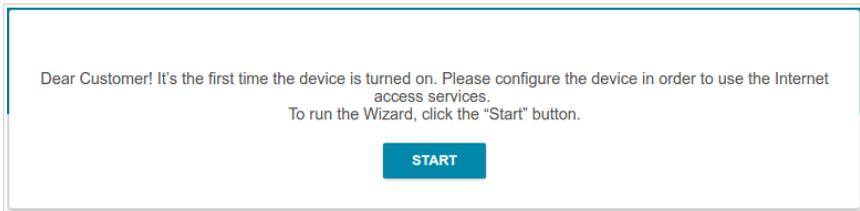

Connecting to Web-based Interface

Start a web browser. In the address bar of the web browser, enter the domain name of the extender (by default, **dlinkap.local**) with a dot at the end and press the **Enter** key. Also you can enter the IP address of the device (by default, **192.168.0.50**).

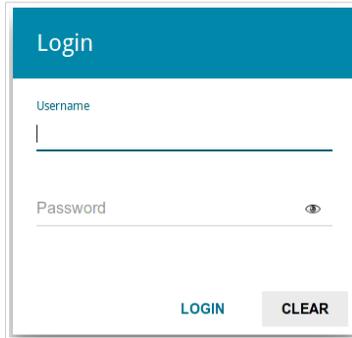

! If the error “*The page cannot be displayed*” (or “*Unable to display the page*”/“*Could not connect to remote server*”) occurs upon connecting to the web-based interface of the extender, make sure that you have properly connected the device to your computer.

If the device has not been configured previously or the default settings have been restored, after access to the web-based interface the Initial Configuration Wizard opens (see the **Initial Configuration Wizard** section, page 13).

If you configured the device previously, after access to the web-based interface the login page opens. Enter the username (**admin**) in the **Username** field and the password you specified in the **Password** field, then click the **LOGIN** button.

The screenshot shows a login form with a teal header containing the word "Login". Below the header, there are two input fields: "Username" and "Password". The "Username" field has a vertical cursor at the beginning. The "Password" field has a small eye icon to its right, indicating it is a password field. At the bottom of the form, there are two buttons: "LOGIN" and "CLEAR".

The **Summary** page displays general information on the extender and its software.

The screenshot shows the 'Summary' page of the DAP-1610 web interface. The page is divided into several sections:

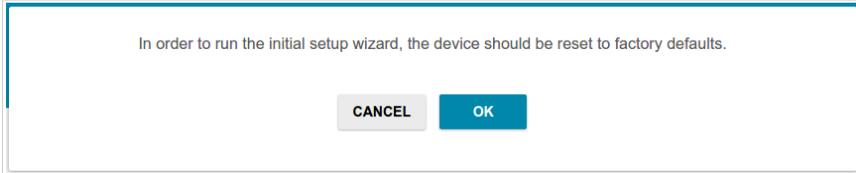

- Device Information:**
 - Model: DAP-1610
 - Hardware revision: A1
 - Firmware version:
 - Build time:
 - Vendor: D-Link Russia
 - Support: support@dlink.ru
 - Summary: Root filesystem image for DAP-1610
 - Uptime: 0 days 00:17:07
- Wi-Fi 2.4 GHz:**
 - Status: On
 - Broadcasting: On
 - Additional networks count: 0
 - Network name (SSID): DAP-1610-4d6f
 - Security: WPA2-PSK
- Wi-Fi 5 GHz:**
 - Status: On
 - Broadcasting: On
 - Additional networks count: 0
 - Network name (SSID): DAP-1610-5G-4d6f
 - Security: WPA2-PSK
- LAN:**
 - LAN IPv4: 192.168.0.50
 - LAN IPv6: fd01::50/64
 - Wireless connections: -
 - Wired connections: -
- LAN Ports:**
 - LAN1: 100M-Full

The web-based interface of the extender is bilingual (English/Russian). You can select the needed language upon the initial configuration of the web-based interface of the device or in the **System / Configuration** section of the menu.

Other settings of the extender are available in the menu in the left part of the page. Go to the relevant section and select the needed page or run the wizard in the **Initial Configuration** section.

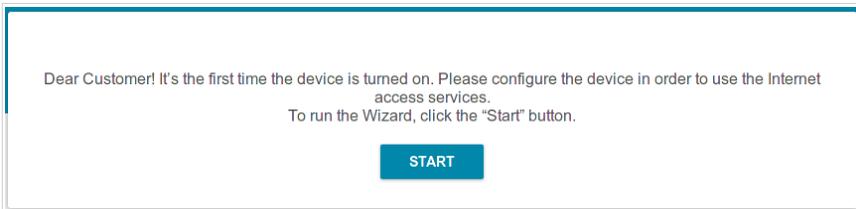

Initial Configuration Wizard

In order to start the Initial Configuration Wizard manually, go to the **Initial Configuration** section.

Click the **OK** button and wait until the factory default settings are restored. Then click the **START** button.

If the device has not been configured previously or the default settings have been restored, the Initial Configuration Wizard starts automatically upon access to the web-based interface or upon opening a web site on the Internet.

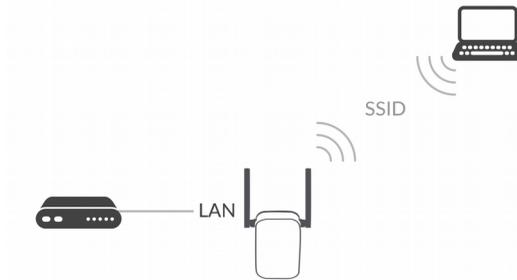

1. Click **YES** in order to leave the current language of the web-based interface or click **NO** to select the other language.

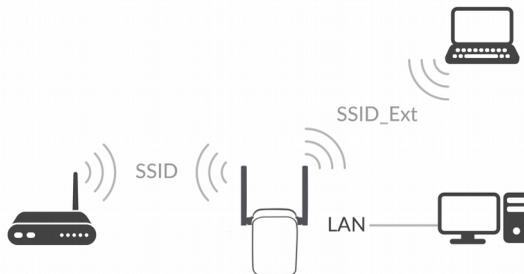

2. On the next page, click the **CONTINUE** button.

Selecting Operation Mode

In order to connect your device to a wired router for adding a wireless network to the existing local network, on the **Device mode** page, from the **Connection method** list, select the **Wired connection** value. In this mode you can change the LAN IP address, set your own settings for the wireless network and set your own password for access to the web-based interface of the device.

In order to connect your device to a wireless router for extending the range of the existing wireless network, on the **Device mode** page, from the **Connection method** list, select the **Wi-Fi** value. Then from the **Work mode** list select the **Repeater** value. In this mode you can change the LAN IP address, connect your device to another access point, set your own settings for the wireless network, and set your own password for access to the web-based interface of the device.

In order to let a wired PC connected to your device access the network of a wireless router, on the **Device mode** page, from the **Connection method** list, select the **Wi-Fi** value. Then from the **Work mode** list select the **Client** value. In this mode you can change the LAN IP address, connect your device to another access point and set your own password for access to the web-based interface of the device.

When the operation mode is selected, click the **NEXT** button.

Changing LAN IPv4 Address

This configuration step is available for the **Access point**, **Repeater**, and **Client** modes.

1. Select the **Automatic obtainment of IPv4 address** to let DAP-1610 automatically obtain the LAN IPv4 address.

! If the extender obtains the LAN IPv4 address automatically, then after finishing the Wizard you can access the web-based interface using the domain name (by default, `dlinkap.local`) with a dot at the end.

If you want to manually assign the LAN IPv4 address for DAP-1610, do not select the **Automatic obtainment of IPv4 address** checkbox and fill in the **IP address** and **Netmask** fields and, if needed, the **Gateway IP address** field. Make sure that the assigned address does not coincide with the LAN IPv4 address of the router to which your device connects.

LAN

Automatic obtainment of IPv4 address

! Automatic obtainment of IPv4 address sufficiently protects against use of the same addresses in one LAN. In order to avoid IPv4 address conflicts, static IPv4 addresses of LAN devices should not coincide with addresses from the address range assigned by an upper-level router (or a local DHCP server).

IP address*

192.168.0.50

Netmask*

255.255.255.0

Gateway IP address

< BACK

NEXT >

2. Click the **NEXT** button.

Wi-Fi Client

This configuration step is available for the **Repeater** and **Client** modes.

1. On the **Wi-Fi client** page, in the **Wireless Networks** section, select the network to which you want to connect. When you select a network, the **Network name (SSID)** and **BSSID** fields are filled in automatically.

If you cannot find the needed network in the list, click the **UPDATE LIST** button.

2. If a password is needed to connect to the selected network, fill in the relevant field.

Wi-Fi Client

Connecting to network

Select network from list

Network name (SSID)

BSSID

Wireless Networks [UPDATE LIST](#)

Network name (SSID)	Security settings	Channel
DIR-825-5G-0105	[WPA2-PSK] [AES]	56

If you connect to a hidden network, from the **Connecting to network** list select the **Connect to hidden network** value. Then select the band where the hidden network operates from the **Frequency band** list and enter the network name in the **Network name (SSID)** field. Then select a needed value from the **Network authentication** list and then, if needed, enter the password in the relevant field.

3. Click the **NEXT** button.

Configuring Wireless Network

This configuration step is available for the **Access point** and **Repeater** modes.

1. On the **Wireless Network 2.4 GHz** page, in the **Network name** field, specify your own name for the wireless network in the 2.4GHz band or leave the value suggested by the extender.
2. In the **Password** field, specify your own password for access to the wireless network or leave the value suggested by the extender (WPS PIN of the device, see the barcode label).
3. You can restore the parameters of the wireless network specified before resetting to factory defaults. To do this, click the **RESTORE** button.

Wireless Network 2.4 GHz

Enable

Broadcast wireless network 2.4 GHz

Disabling broadcast does not influence the ability to connect to another Wi-Fi network as a client.

Network name*

|

The number of characters should not exceed 32

Open network

Password*

.....

Password should be between 8 and 63 ASCII characters

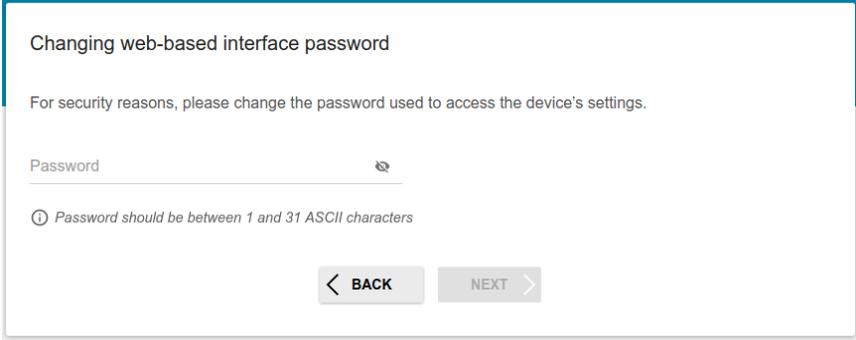

RESTORE You can restore network name and security that was set before applying factory settings.

< BACK **NEXT >**

4. Click the **NEXT** button.
5. On the **Wireless Network 5 GHz** page, specify needed settings for the wireless network in the 5GHz band and click the **NEXT** button.

Changing Web-based Interface Password

On this page you should change the default administrator password. You may set any password except **admin**. Use digits, Latin letters (uppercase and/or lowercase), and other characters available in the US keyboard layout.¹

Changing web-based interface password

For security reasons, please change the password used to access the device's settings.

Password

① Password should be between 1 and 31 ASCII characters

! Remember or write down the new password for the administrator account. In case of losing the new password, you can access the settings of the extender only after restoring the factory default settings via the hardware **RESET** button. This procedure wipes out all settings that you have configured for your extender.

Click the **NEXT** button.

On the next page, check all the settings you have just specified.

Also you can save a text file with parameters set by the Wizard to your PC. To do this, click the **SAVE CONFIGURATION FILE** button and follow the dialog box appeared.

To finish the Wizard, click the **APPLY** button.

¹ 0-9, A-Z, a-z, space, !"#\$%&'()*+,-./:;<=>?@[\\]^_`{|}~.

SPECIFICATIONS*

Hardware	
Processor	· MT7628NN (575/580MHz)
RAM	· 64MB, DDR2
Flash	· 8MB, SPI
Interfaces	· 10/100BASE-TX LAN port
LEDs	· POWER/WPS · Wi-Fi Signal Strength
Buttons	· WPS button to set up wireless connection · RESET button to restore factory default settings
Antenna	· Two external non-detachable antennas (3dBi gain for 2.4GHz and 2dBi gain for 5GHz)
MIMO	· 2 x 2
Power connector	· CEE 7/16 plug for AC power supply

* The device features are subject to change without notice. For the latest versions of the firmware and relevant documentation, visit www.dlink.ru.

Software	
Network functions	<ul style="list-style-type: none"> · DHCP server · Automatic obtainment of LAN IP address · DNS relay · Autonegotiation of speed, duplex mode, and flow control/Manual speed and duplex mode setup for the Ethernet port
Firewall functions	<ul style="list-style-type: none"> · MAC filter
Management	<ul style="list-style-type: none"> · Local and remote access to settings through TELNET/WEB (HTTP/HTTPS) · Bilingual web-based interface for configuration and management (Russian/English) · Firmware update via web-based interface · Automatic notification on new firmware version · Saving/restoring configuration to/from file · Support of logging to remote host · Automatic synchronization of system time with NTP server and manual time/date setup · Ping utility · Traceroute utility

SAFETY RULES AND CONDITIONS

Please carefully read this section before installation and connection of the device. Make sure that the device is not damaged. The device should be used only as intended in accordance with the documents.

The device is intended for use in dry, clean, dust-free, and well ventilated areas with normal humidity away from strong heat sources. Do not use the device outdoors or in the areas with high humidity. Do not place foreign objects on the device. Do not obstruct the ventilation openings of the device. The environmental temperature near the device and the temperature inside the device's cover should be within the range from 0 °C to +40 °C.

Plug the device only into working electrical outlets with parameters indicated on the device.

Do not open the cover of the device! Unplug the device before dusting and cleaning. Use a damp cloth to clean the device. Do not use liquid/aerosol cleaners or magnetic/static cleaning devices. Prevent moisture getting into the device.

The service life of the device is 2 years.

TECHNICAL SUPPORT

You can find software updates and user documentation on our website.

D-Link provides its customers with free support within the product's warranty period.

Customers can contact the technical support group by phone or by e-mail/Internet.
